Welcome

Sakata has more than 100 years of experience in providing growers with innovative and value-added genetics. While our early reputation was built around world-class seed production, the quality of our vegetative assortment is second to none and continues to expand.

Our breeding efforts are focused on delivering exceptional performance throughout the value chain; meeting the demands of growers, retailers and end consumers alike. In addition to delivering reliable and award-winning performance, we provide in-depth technical support for all our vegetative products, together with marketing programmes to help you sell.

Our dedication toward advancing the flower industry is reflected in our dynamic breeding programmes and an impressive pipeline of innovative products to come. Breeding breakthroughs don't come around often, but Sakata's vegetative assortment is a great place to start your search for innovative and award-winning genetics.

SunPatiens® grows in sun or shade, rain or shine, and provides unmatched colour in the garden for three seasons of the year. Easy to grow and unaffected by downy mildew, more and more growers are converting to SunPatiens and watching their sales grow as a result. Now repositioned into two series, Compact and Vigorous, to make choosing the right variety for the job clearer and easier than ever.

SuperCal® offers the best traits of petunia and calibrachoa rolled up into one super performer. Featuring stronger roots, larger, non-sticky flowers and exceptional heat tolerance, it's another fine example of Sakata products that provide value to growers, retailers and consumers alike.

Calipetite™ - a naturally compact mound of colour that grows into a dense ball without any need for growth regulators or supplemental lighting: a breakthrough in Calibrachoa breeding! There are 7 colours in the series, all ideal for on-trend 3 colour mixes.

Osteospermum is a traditional and immensely popular garden favourite, and Sakata has more than 20 years breeding experience in this crop. Cape Daisy® is the benchmark series that sets the quality standard for the industry.

CALIPETITE™

Natural beauties!

Calibrachoa x hybrida

CALIPETITE™

Calipetite™ is a breakthrough in Calibrachoa breeding. It is a naturally compact mound of colour that grows into a dense ball without any need for growth regulators or supplemental lighting. This eye-catching series is ideal for colour bowls, and has irresistible retail sales appeal.

- * Strong bright colours are eye-catchers at retail
- * High pH tolerance (7.2+) prevents yellowing of foliage
- * Dense mounding habit is ideal for shipping and strong retail presentation
- * Naturally compact without PGRs, economical and environmentally friendly
- * Blooms under very short days
- * Suitable for on-trend 3-in-1 mixes due to compact habit and uniformity

SUNPATIENS®

The all-Weather Impatiens.

These remarkable plants represent a breeding breakthrough: robust, sun-loving Impatiens that thrive in full sun or part shade and deliver continuous colour from spring, all through summer and right up to the first harsh frosts of winter. Unaffected by Downey Mildew, SunPatien[®]s are an excellent alternative to seed Impatiens, offering non-stop colour and robust coverage in semi-shaded areas. Now even more clearly positioned with two distinct habits for containers and garden beds or larger landscape fill, both in a wide range of colours and performing in sun or shade, rain or shine.

❁ SUNPATIENS® COMPACT

With shorter internodes and excellent branching, the SunPatiens® Compact Series is bred for smaller container production and excellent retail appeal. These dense, mounded plants are the ideal series for general retail assortment, and provide excellent garden performance cross three seasons, making consumers want to come back and buy, year after year.

❁ SUNPATIENS® VIGOROUS

SunPatiens® Vigorous is the SunPatiens® series most used for landscape and mass plantings. Constant development in these genetics has led to better control of the ratio between vigour and plant habit, so that the new generation of Vigorous SunPatiens® is strong, well branched and with well-controlled vigour, even in warmer climates. Vigorous SunPatiens® are recommended for use in (mass) beds and large containers, and are ideal for economical, long-lasting ground cover.

These developments in the SunPatiens® Vigorous series have incorporated the strong characteristics of the Spreading Series - fast-fill in containers and good ground cover. Therefore, we have decided to incorporate the best genetics into the Vigorous series to offer one clearly positioned, genetically excellent series. From Season 2015/16 we will offer:

✿ GROW SUNPATIENS® COLD WITH GREAT RESULTS

SunPatiens®, very well known for its excellent heat tolerance, also tolerates cold temperatures! Moreover, it tolerates colder temperatures than most regular Impatiens New Guinea. Therefore SunPatiens® offers great advantages for both consumers and growers.

For consumers, the better cold tolerance offers great advantage for a broader use of SunPatiens® as a true bedding plant in colder climates, as well as in Autumn.

For growers, the better cold tolerance offers the advantage of saving heating costs when growing plants. In addition, the colder conditions and less use of PGRs keep the plants more compact, resulting in a better plant habit, better plants for transplanting outdoors and better garden performance than other Impatiens New Guinea varieties.

Sächsisches Landesamt für Umwelt, Landwirtschaft und Geologie (LfULG) in Dresden conducted research on a wide range of Impatiens New Guinea, including SunPatiens®. Plants were grown under two different growing conditions, one with an average day temperature of 14°C and the other at an average temperature of 19°C.

All SunPatiens® varieties in the test scored higher in overall impression at 14°C compared with plants grown at 19°C.

Recommendations for growing SunPatiens® colder:

Keep temperature at 16 - 18°C. in the first week or so after transplanting. This will allow the roots to get a good start in the pot.

After plants are established, temperature can be lowered to an average day temperature of 14 - 15°C. SunPatiens® are rather flexible and can accept temperatures lower than 14°C. as long as the average temperature is kept at 14°C.

Temperatures below 12°C. are not recommended for a long period of time. When grown colder, SunPatiens® flowering delays with 2 to 3 weeks, depending on how cold they are grown.

❁ SUNPATIENS® IN THE LANDSCAPE

SunPatiens is the Landscaper's secret to success!

- * Economical - fewer plants needed to cover the same area as traditional bedding plants
- * All-Weather performance - SunPatiens bloom in rain or shine, sun or shade and are suitable for a wide variety of climates
- * Three-season colour: SunPatiens thrive under high heat and humidity but also in cooler summers, right up to the first hard frost. No need to re-plant areas during the season
- * Easy care: continuous colour without the need for dead-heading
- * Disease resistance: Totally unaffected by downy mildew

Last but not least SunPatiens gives a fantastic show! Shown here are some real-life examples from landscape plantings.

✿ MAGIC CARPET™

A tough, durable plant that is loaded with a continuous supply of bright yellow flowers all season long. Magic Carpet™ features a semi-mounding habit that is eye-catching at retail. Because it is both frost and heat tolerant, it is an ideal season extender for early and late sales.

- * Extremely early to bloom
- * Bright yellow blooms blanket plants all season long
- * Durable along garden paths, in high traffic areas and between pavers
- * Superb in baskets and as a component plant in mixed containers
- * Versatile in production - can be produced in any size from 6 cm pack up to hanging baskets

Osteospermum

Sakata's Osteospermum assortment represents more than 20 years of breeding experience in this popular crop, led by the Cape Daisy® series, which has long become the benchmark that other varieties are measured against. For quality, performance and versatility, Osteospermum from Sakata are unequalled in the market.

Osteospermum x hybrida

CAPE DAISY®

The market leading series with the widest range available. Our Cape Daisy® series features core main colours as well as unique novelties to differentiate your assortment from the mainstream production. Cape Daisy®, more than 20 years the original and best!

- * Robust, compact plant habit
- * Core colours and novelties with large flowers in a range of intense colours
- * Mounding habit with good greenhouse and garden performance
- * Tolerates a wide range of production conditions
- * Simple Daisy flowers are a consistent consumer favourite
- * Ideal for production in 12 - 15 cm pots as well as patio planters and mixed containers

CAPE DAISY® ZANZIBAR®

Zanzibar varieties are characterised by earliness, outstanding uniformity and a compact, well-branching habit. It is therefore the ideal series for production in packs and small pots. Two new introductions expand the colour range in this segment and make Cape Daisy Zanzibar even more attractive for growers and retailers.

- * Flowers stay open under low light conditions
- * For pot and patio
- * Very easy to grow
- * Very even flowering
- * Compact habit
- * Good heat tolerance

SUPERCAL[®]

SuperCal[®] has added value for growers, retailers and consumers because its breakthrough intergeneric breeding combines the best qualities of Petunia and Calibrachoa into one unique series. Non-Sticky foliage, large flowers, healthy vigour and excellent heat tolerance deliver the performance that consumer love.

SuperCal[®]
Cherry

✿ SUPERCAL®

Popular for its unique colours and large flowers, SuperCal® is an ideal combination of petunia and calibrachoa traits. It is pH tolerant, day length neutral and can be grown cool. The foliage is not sticky, so flowers drop easily from the plant as they age and plants hold up well in all kinds of weather. SuperCal® is ideal in baskets or containers and, because of its cold tolerance, can be used to extend early and late season sales in addition to core Spring programs.

- * Features large flowers in vibrant colours
- * Early flowering and low temperature requirement for cost-effective production
- * Strong roots minimize disease and pH problems
- * Better heat tolerance than both petunia and calibrachoa
- * Looks great at retail and performs extremely well in the garden through the heat of Summer
- * Leaves are not sticky so old blooms drop cleanly
- * Excellent weather tolerance - flowers rebound quickly after rain
- * Ideal for baskets and mixed containers as well as beds

✿ LIPSTICK

This new small-flowered Petunia has a colour you can't miss! The bright Lipstick-pink flowers with white centres draw attention from across a crowded room. Ideal at retail and a non-stop performer in the garden, on the patio or in balcony baskets and planters. The mounded, slightly spreading habit makes this a versatile option for a multitude of uses.

- * Plant habit mounded, fairly compact and well branching
- * Special eye-catching pink-rose flower with white throat
- * Early flowering
- * A stunning performer in patio containers and hanging baskets

SUN DANCE

This new series of vegetative portulaca has a semi-mounding, upright habit so Sun Dance™ makes a strong retail presentation and a colourful show in the garden.

- * Upright habit in proportion to pot for strong retail appeal
- * Large flowers stay open longer into the early evening for greater consumer satisfaction
- * Extremely heat tolerant, providing colour throughout the summer
- * Sun Dance is in addition to being heat tolerant also very drought tolerant
- * Excellent season extender
- * Recommended for any pot size between 10 cm. and hanging baskets 25-30 cm. As expected larger container need to transplant more plants.
