

2002 *Hosta* Registrations

Thanks, to all who took the time to register cultivars in 2002.

There were 234 registrations for 2002 and 3 additions and/or amendments to prior registrations. An updated index is included with this year's new registrations. Corrections to prior registrations are on page 35. Registrations are established when printed in a publication that reaches the general public. Other communications, including electronic media, are not considered valid for epithet establishment under the International Code of Nomenclature.

The simplified form introduced in June of 1998 resulted in some wide variation in the detail of cultivar descriptions. One significant difference was in the dimensions of the "plant". Part of the simplification was to give registrants the option to place their cultivar in a more general category rather than give the specific dimensions. These categories (miniature, small, medium, large, and giant) are somewhat arbitrary. Because of this, dimensional measurements have been utilized when provided, understanding that they reflect clump size at the age recorded.

Under parentage information (found within the brackets) the category of "parentage undetermined" was added in 1997. As is consistent with the registrar's policy of not adding further to the confusion of the nomenclatural soup, this category is used when the parentage information submitted by the registrant contradicts information already in print. "Parentage undetermined" does not imply anything regarding the validity of either existing published information or information submitted by the registrant, only that an inconsistency exists. Parentage information published with registrations is intended to be "known parentage" as opposed to guesses, educated or otherwise. The abbreviation t.c. is used to indicate "tissue culture".

Brief Key to Descriptions:

ONIR: O=originator, N=nominant (Namer), I=introducer, R=registrant.

Flowers: Bloom periods are given in either start – peak – finish format or a more general period format. The general periods are very early period: before June 1, average period: June 1 – July 15, summer period: July 15 to August 15, late period: August 15 to October 1, very late period: after October 1.

Bloom Period Codes: Ties the flowering of the cultivar to a "species scale". The registrant has provided the number code from the scale below for the start - peak - finish of the flowering period.

1	2	3	4	5	6	7	8	9

H. sieboldiana		H. ventricosa		H. plantaginea		H. 'Tardiflora'		

Forms: Registration forms are available from the registrar, or may be obtained on the Internet at: <http://www.hosta.org/> or at: <http://hostalibrary.org/>. I welcome inquiries regarding availability or validity of names in advance of the formal submission on registration request forms.

Additions, Corrections and Clarification:

The O and I for *H.* 'Fallen Angel' were incorrectly entered. It should show Floyd and Carolyn Broussard as (OI). Corrected it should read:

H. 'Fallen Angel' F. & C. Broussard (OI), K. Walek (ONIR)

H. 'Blue Line' was registered in 1987.

There are several spellings for the Paul Aden registration of *H.* 'Jamblelah'. I queried former registrar David Stevenson who responded that this question comes up every few years. At one point, he queried Paul Aden, who indicated that the non-standard spelling 'Jamblelah' was intended. It is registered with that spelling in the 1978 list of registrations. The "corrected" spelling in the Silver Book as *H.* 'Jambalaya' is not acceptable, and should not be used. Dave used the original established and registered spelling 'Jamblelah' in indexes and other publications. I will continue the same policy.
