Trevanion Daffodils

BULBOCODIUMS

Quen Dor 10Y-Y

Tall, hardy and big, but still miniature, this is one of the most impressive bulbocodiums here. Early spring.

\$8/bulb

Nug Nutsch 10Y-W

This is the best of the reverse bicolors and is also a good parent of reverses.

Winter flowering.

\$10/bulb

Immersh 10Y-Y

This is a short stemmed variety with great substance and, for a bulbocodium, very broad petals. Pale yellow; not quite white.

Early spring flowering, just a bit later than Quen Dor here.

\$10/bulb

Trevanion Daffodils

Nedth 10Y-Y

A hardy winter flowering yellow.

\$10/bulb

Dwish 10Y_Y

This is an extremely vigorous mid-winter flowering yellow bulbocodium.

\$10/bulb

Gwella Gwair

This is a wonderful mid-winter yellow bulbocodium.

\$12/bulb

Trevanion Daffodils

Winter Colors

'Winter Colors' names a population of winter flowering bulbocodiums in the same way that 'Autumn Colors' names a population of Bill Welch's autumn flowering tazettas.

Here they are shown flowering mid-winter in an open paddock near Yass. Bulbocodiums are the most frost hardy of the winter flowering daffodils.

\$2/bulb

INTERSECTIONAL BULBOCODIUM HYBRIDS

Gold Step Alfriston x bulbocodium 10Y-Y

This is an astonishingly vigorous inter-sectional bulbocodium hybrid that has proven itself to be a parent of vigorous seedlings. Its classification as division 10 is correct I think (by comparison traditional division 5's do not look like triandrus). It is a small daffodil but is NOT technically a miniature.

\$15/bulb; 3 for \$30; 5 for \$40

Gold Stride 10_04MB = Gold Step selfed? 10Y-Y

This has been released for breeding purposes only. Just a few available.

Gold Step has given a number of partially fertile seedlings, presumably through selfing, but this is the only one that is fully fertile.

Gold Stride survives but it is not wildly vigorous in the way that Gold Step is. It can produce a lot of seed. There are hints that it may give a higher percentage of seedlings with some fertility when crossed with main division flowers, a type of cross that can give very nice intermediates.

\$60/bulb

Trevanion Daffodils

Steplings grex of Gold Step seedlings 10Y-Y

The seedlings are like Gold Step but are sterile or nearly so. They are too good to just throw away.

The picture is of 10_08MB

\$8/bulb

JONQUILS

N. viridiflorus

This is a green autumn flowering species.

2 bulbs, one of each, for \$20

Trevanion Daffodils

JONQUILS: - VIRIDIFLORUS HYBRIDS

Viriquilla **03_01MJ = Limequilla x Emerald Sea** **7W-Y**

Bred with pollen generously sent by John Hunter from New Zealand this flower has superb form and vigour. It has only a slight green cast from viridiflorus but it should be valuable for breeding green flowers. It is fertile and winter flowering but appreciates protection from frost.

\$15/bulb

Viriverse **07_03MJ = Hillstar x Emerald Sea** **7YYW-Y**

Also from John Hunter pollen this flower has good form and vigour. Like the other Viri's, this variety is winter flowering, fertile, and needs some frost protection. I grow them against the north wall of the house. The scent of these hybrids is heavenly.

\$15/bulb

Viristar **07_04MJ = Hillstar x Emerald Sea** **7W-W**

Also from John Hunter pollen, this flower has good form and vigour but it is perhaps a little less tidy than the other Viri's. It is winter flowering, has some fertility, and needs some frost protection.

\$15/bulb

Trevanion Daffodils

Virivest **01_01MJ = Westholme x N. viridiflorus** **7W-G**

Bred directly from *N. viridiflorus* this variety is neither as big nor as robust as the other Viri's. It flowers autumn/early winter.

\$20/bulb

Virition **07_06MJ [Hillstar x Quick Step] x Emerald Sea) 7W-W**

Also from John Hunter pollen, this flower has more florets. And is more fertile than the other Viri's, but is slower to increase. It is an excellent parent.

\$40/bulb

Theogold **12_11MJ = Viriquilla x N. fernandesii** **7Y-Y**

This a small (but not miniature) vigorous jonquil hybrid. Winter flowering. It's first seedlings have flowered in their third year. It seems certain to be a great parent.

\$20/bulb

Trevanion Daffodils

Theoquil **09_02MJ = Viriquilla x N. fernandesii** **7W-Y**

Theoquil became interesting because it parented a fully fertile jonquil hybrid. It is still interesting because of its color but as a parent it seems likely that Theogold will surpass it.

\$20/bulb

Shatter Green **03_01J = N. fernandesii SS105 x N. viridiflorus 7G-G**

A novel winter flowering miniature. It is probably 7Y-Y but it is notable for the strong green cast it inherits from its green pollen parent. Appears to have very little fertility but might be worth trying in a warmer climate.

\$30/bulb

10_03MJ **Viriquilla x Virivest** **7W-G**

This is a tall robust viridiflorus hybrid that flowers early winter here.

\$30/bulb

Trevanion Daffodils

14_01MJ Viriverse x Theoquil 7W/Y-Y

This is an outstandingly vigorous Viriverse seedling with very good fertility. I'm not totally convinced this seedling is true to cross.

\$20/bulb

12_10MJ 07_2MJ x 03_19MJ 7Y-Y (~7G-G)

07_02MJ is (Hillstar x Quickstep) x Emerald Sea. 03_19MJ is a poor yellow viridiflorus hybrid whose seedparent is unknown -it was used for the sake of genetic diversity. This seedling is a robust and fairly respectable result.

\$30/bulb

10_62MJ Viriquilla x N. fernandesii 7Y-Y

This is a sibling of Theogold. It is larger than Theogold, not as vigorous, and is not so good a show flower. Like 10_45MJ it sets a new standard for exhibition jonquils, in my opinion because it has more of the multi-floreted character of the best examples of the species. It too has fertility but I have not yet selected any seedlings from it.

\$20/bulb

JONQUILS: - FERNANDESII HYBRIDS

Jolly Jumbuck

08_06MJ = Demmo x 02_02J (N. fernandesii) 7Y-O

This has turned out to be a nice exhibition daffodil. It has slight fertility and may prove to be a useful parent. The name was suggested by Fermi de Sousa.

\$15/bulb

10_45MJ

Limequilla x 02_02J (N. fernandesii)

7W-W

Jonquilla is a notably a multi-headed species. In my view, a good division 7 bred from it should have many florets. Two is not enough! This variety easily produces 6 florets, and although it takes a little time to completely whiten, it sets a new standard for exhibition jonquils. Hardy and a good increaser, I expect this to be a marvel in the hands of experienced exhibitors.

\$20/bulb

Trevanion Daffodils

09_12MJ N. fernandesii MS449 x Redlands Too 7Y-O

This has to be kept as part of a breeding collection so I assume it is as good as its pedigree suggests and much better than the photo.

\$10/bulb

03_07MJ N. fernandesii MS449 x Mrs David Calvert 7Y-O

This flower was given a bad rap in the 2015-16 catalogue. It may be a more useful parent than first appeared. Petals fade as the flower ages. Extremely vigorous.

\$10/bulb

14_15MJ 09_12MJ x 10_54MJ 7W-Y

09_12MJ is listed above.
10_54MJ is (Hillstar x Quick Step) op

This jonquil has nice contrast but appears to be sterile. Good doer.

\$10/bulb

MORE FERTILE JONQUIL HYBRIDS

06_06MJ Limequilla x (Hillstar x Gertrude Nethercote) 7YYW-W

This is a nice, intensely reversed, hardy, fertile jonquil.

\$10/bulb

09_23MJ Limequilla x (Hillstar x Gertrude Nethercote) 7YYW-W

This is a sibling of 06_06MJ above. There is no good photo of it but I use it for breeding so we can assume it is a good flower similar to its sibling.

\$10/bulb

13_42MJ 03_12MJ x 02_04MJ~7W-P

13_03_12MJ is an orangey reversish Hillstar x Quickstep. 02_04MJ is Hillstar x Gertrude Nethercote. This unusual and quite attractive peachy colored flower will prove, I think, to be a nice vigorous floriferous garden flower. The pedigree may actually be correct, which might account for both the vigour and the reluctant fertility. It is a pity it is not a more dependable seedparent. Just a few available.

\$20/bulb

Trevanion Daffodils

TAZQUILS

Yazscent 03_01JT = jonquilla x Soleil D'Or 8Y-Y

This flowers late winter or early spring. It is not an exhibition flower and it sometimes has flowers lower in the foliage than is ideal but it is vigorous, indestructible and has the most pleasing of all daffodil scents.

\$5/bulb

Autumn Jade 12_01TX = Taztep x Virivest 8W-G -> 8W-W

This flowers here in May if watered and in August if not. This was a very good cross, but this selection is the earliest and the most welcome. A nice vase flower but of no use for breeding.

\$50/bulb

'POETAZ' TAZETTA

Nomatta 04_01MT = Cloth of Gold (artificial tetraploid) x Welch seedling 8Y-O

I assume the Bill Welch seedling is 95/1, which I understand is Matador x [(Autumn Sol x Ballymarlow) op]. This seedling almost certainly has Matador-like genetics ($2 \times 10 + 2 \times 7 = 34$ chromosomes). It is perhaps a bit low in the foliage and the flowers are a bit wayward in the way that Cloth of Gold is but it is vigorous and sunproof and much more fertile than Matador. The name is an allusion to Matador.

\$30

Trevanion Daffodils

WHITE TAZETTAS

Autumn Quartz **07_01W = paperwhite x *N. broussonetii* 8W-W**

This is a very big paperwhite (from Bill Welch seed) with a huge bulb, that, like its pollen parent, reliably flowers in the autumn. For those who don't like the smell of paperwhites this one will be a very pleasant surprise. The plant is sterile here and the foliage is green rather than glaucous like a true paperwhite.

\$25/bulb

10_01W ***N. panizzianus*** **8/13W-W**

This is a sublime little autumn/winter flowering paperwhite. Survives frost but will benefit from protection. (This is an op seedling of a plant grown from seed from Michael Salmon.)

\$20/bulb

10_07W ***N. panizzianus* x *N. dubius* 8W-W**

This is such an odd little paperwhite that I assume the pedigree is correct. Winter flowering and will survive frost but will be much happier and look much better with a bit of protection.

\$20/bulb

Trevanion Daffodils

Tetraploid paperwhite 8W-W

This was grown from seed from Bill Welch. I have no doubt it is tetraploid. Unfortunately, I can't seed it in my climate. It may be a reluctant parent.

\$10/bulb

GRAMON SERIES

Except for Gramonesque this series are from Taztep x Autumn Colors. Gramonesque and Autumn Colors are from seed from the Californian Bill Welch.

The Gramons are big, robust, and carry large clumps of florets high above the foliage. As a group they are scarcely believable and this is in Canberra where the climate doesn't suit them. This last frosty winter they did very well on the west side of the house. They will do very much better in less frosty conditions.

All are mid winter flowering but they can be forced with cool wet conditions or delayed by being kept dry. An exhibitor could do very well with them.

Trevanion Daffodils

Taztep 8W-Y

Taztep is vigorous but modest and not particularly distinct except that it has proven itself a **MUST HAVE** seed and pollen parent for anyone interested in breeding tazettas. It appears to be a perfectly fertile tetraploid, two parts colored tazetta, two parts paperwhite.

\$10/bulb; 3 for 20; 5 for \$30

Gramonesque 8W-Y to 8W-W

(A stray from Bill Welch 'Autumn Colors' seed - perhaps Autumn Colors x tetraploid paperwhite)

\$15/bulb

Gramoneed 8Y-Y

This has become my favourite Gramon. It has soft coloring but it stands tall and stately for weeks in the winter.

\$25/bulb; 3 for \$50

Trevanion Daffodils

Gramonella 8Y-Y

\$25/bulb

Gramonex 8W-Y

\$25/bulb; 3 for \$50

Trevanion Daffodils

COLORED TAZETTAS

- called 'Jonquils' by florists

First Stanza (N. elegans x Soleil D'Or) 8W-O

This is one of the most remarkable of all tazettas. It is one of the very first daffodils to flower in the autumn, flowering within weeks of a cool wet change - and can be forced to flower even earlier by putting it in the shade and watering it. It has scent that may be pleasant even to those who dislike tazettas. It is outstandingly floriferous and an outstanding increaser with almost every offset producing a stem of flowers. It may prove to be one of the very few daffodils that succeed on the coast. It is fully fertile for those interested in daffodil breeding.

\$10/bulb; 3 for \$20; 5 for \$30

Gold Stanza (N. elegans x Soleil D'Or) 8Y-O

A sibling to First Stanza this was the only yellow seedling from the cross. It typically flowers a little earlier than First Stanza. It is hardy here but does not increase as quickly as First Stanza and doesn't seem to be as good a parent.

\$25/bulb

Tanz 10_04T = First Stanza x 05_01T 8W-O

05_01T is an Autumn Surprise sibling (N. tazetta subsp. laticolor x N. elegans). This is not miniature but it is an exquisite intermediate between First Stanza and the (laticolor x elegans) miniatures with a cup that is closer to elegans. The name is a small piece of 'First Stanza'. Autumn flowering.

\$40/bulb

Trevanion Daffodils

Anza 10_02T = First Stanza x 05_01T 8W-O

This is from the same cross as Tanz. To my eye Tanz has more striking lines but there is no doubt that Anza is a delightful “intermediate”. (For non-specialists ‘intermediate’ is a category that applies to divisions 1-4 and 11 and NOT 8.) Anza may also not whiten as much as Tanz.

\$20/bulb

Frills Bills 12_09T = 97_12T x 99_08T ?Y-O

97_12T is a nice 8Y-O Autumn Colors. 99_08T is a strange frilly 8Y-Y Autumn Colors. This flower is hard to classify with its strange splits and protrusions. A definite advance on 99_08T I am using this flower in the hope of obtaining new forms, which is looking not too hard because the characteristic is fairly dominant. It is not especially vigorous but seems quite hardy. Flowers here somewhere between April and June.

\$40/bulb

Goldate 12_31T = ? 8Y-Y

This is an 8Y-Y that is almost of uniform color, which is something of a treasure and a rarity here. It is a fertile diploid, probably with Soleil D’Or as at least one parent. Vigorous and a good increaser.

\$20/bulb

Trevanion Daffodils

13_01T and 13_02T First Stanza x 09_13T 8W-O and 8Y-O

09_13T 8Y-O is the earliest Autumn Colors here.

13_01T is 8W-O and 13_02T is 8Y-O

13_01T is earlier and whiter than First Stanza, possibly taller, but not so orange. 13_02T is more robust than Gold Stanza. This is a great offering for growers who want a longer daffodil season.

\$80/pair

97_04T Autumn Colors 8Y-O -> 8O-O

\$10/bulb

07_19T from Wilf Hall seed 8Y-O

\$10/bulb

Trevanion Daffodils

07_28T 8W-O

\$10/bulb

09_13T Autumn Colors 8Y-O

This is reliably the earliest Autumn Colors here.

\$20/bulb

09_30T *N. tazetta* x *N. tazetta* subsp. *lacticolor* 8W-Y

This is a superb, usually autumn, flower - a cross between a miniature *N.t. lacticolor* and a nice dwarf tazetta Will Ashburner sent me. It is not quite miniature.

\$20/bulb

Trevanion Daffodils

08_07T Bairns Sol x 98_22T (Autumn Colors) 8Y-O

\$10/bulb

09_29T Bairns Sol x 98_22T (Autumn Colors) 8Y-O

This photo was taken in February.

\$10/bulb

09_35T Bairns Sol x 98_22T (Autumn Colors) 8Y-O

Yet another very nice flower from this superb cross.

\$10

Trevanion Daffodils

10_12T Bairns Sol x 98_22T (Autumn Colors) 8Y-O

\$10/bulb

10_17T Autumn Colors 8W-Y

8Y-O

\$10/bulb

MAIN DIVISION

Cockatoo Dreaming 01_261 = Fragrant Rose x Decoy 2P-R

This plant's first flower was vandalised by cockatoos hence the name. It was selected anyway because the wilting of the flower intensified the pink in the perianth (which recommends removing the perianth and letting it dry out a little as a way of proving pink in the perianth). It is a good doer but is not a winning exhibition flower. Mid-season

\$30/bulb

Trevanion Daffodils

Marie Parton 02_191 Ruddynosey x 97_37 (Creag Dubh x Flashing Light) 20-O

\$30/bulb

Yaziverse 03_141 may be Tristram x Impeccable 2YYW_W

This reverse has passed the hardiness test both in the field and in boxes (that kill 50% of varieties). This might make it one of the best of its kind. Flowers have strong contrast and are very long lasting. Mid season.

This variety belongs in the following list because the bulbs have been box grown and are smaller than usual.

\$15/bulb

PEDIGREE FLOWERS

The following list will be most interesting to connoisseurs of daffodil pedigrees. Many crosses have been made with a view to further crosses and most involve outbreeding, often radically so. Mirrabooka 2W-W x 01_157 (Gold Convention 2Y-Y x Redlands Too 2Y-R) is a nice example. Interesting has been the retrieval of pink after outcrossing with 2Y-O. Retrieving division 3 from crosses with divisions 1 and 2 is proving difficult.

The bulbs are most valued because of their hardiness in tough growing conditions. They have been grown in polystyrene boxes and have done well in conditions that are too difficult for most varieties.

The bulbs (in most cases) should flower but they are **SMALL** and undergrown.

GD - they have done well

VG - they have done very well.

Only a few of each variety are available.

Where color codes have been suggested L stands for light yellow and K for red-pink.

~ means approximately

-> means approaching

The photo is **BELOW** the pedigree.

Further information may be available on request.

12_39 2W-O Symptom x 05_02 (97_09 x 98_35)[Turakina x Bandit/Voda?][Voda x Gotcha?].

Early division 3.

VG

\$20/bulb

12_297 2W-O Young Blood x 01_172 (Ablaze x Souvenir)

VG

\$10/bulb

12_377 2W-O 02_390 x 01_261(Cockatoo Dreaming) (Flashing Light x Quasar) (Fragrant Rose x Decoy)

Very late.

VG

\$15/bulb

Trevanion Daffodils

12_315 1W-Y 05_127 x 05_135 (Turakina x Rubicon Orange) (97_23 x Wyong)

GD

\$15/bulb

10_203 Impeccable x 97_26 (Arctic Doric x Merry Princess?)

VG

\$10/bulb

06_77 Lady Slim x 98_64 (Loophole x Merry Princess?)

GD

\$10/bulb

Trevanion Daffodils

08_10 Superwhite x 98_51 (Loophole x Merry Princess?)

This daffodil would have been discarded because it has too many deformed flowers except that it is very early and is wonderfully hardy.

VG

\$10/bulb

06_148 01_235 x 01_231 (Patabundy x Creag Dubh) x (Impeccable x)

VG

\$10/bulb

06_27 98_26 x 00_04 (Fly Half x Cheerleader?)(Tia x Redlands Too)

Early

VG

\$15/bulb

Trevanion Daffodils

08_270 01_235 x 01_231 (Patabundy x Creag Dubh) X (Impeccable Op)

GD

\$10/bulb

08_230 Flash Affair x 01_02 (Redlands Too x Impeccable)

VG

\$10/bulb

09_340 Dateline x Banker

VG

\$15/bulb

Trevanion Daffodils

10_108 04_122 x 04_111 (Fly Half x Decoy) (Topnotch x Lemon Sails)

GD

\$15/bulb

10_637 Cowboy x 99_17 (Tia Op)

VG

\$10/bulb

11_226 2Y-YYR Banda x 02_31 (Redlands Too x Impeccable)

GD

\$20/bulb

Trevanion Daffodils

06_182 Ruddynosey x Lemon Sails

GD

\$10/bulb

10_313 ~1Y-O Ruddynosey x Uncle Duncan

VG

\$10/bulb

09_390 Gold Convention x 01_375 (Just-A-Dash x Ruddynosey)

VG

\$15/bulb

Trevanion Daffodils

12_124 10-O-> 02_74 x Marie Parton (Inca Gold x Impeccable))

GD

\$20/bulb

05_161 Copperfield x 01_227 (Creag Dubh x Lemon Haze)

VG

\$10/bulb

10_93 Yaziverse x 04_72 (Celtic Gold x Reference Point).

Unfortunately, a good picture of this was not taken when the photo of Yaziverse was taken. This is a less contrasted flower which matures with a yellow rim.

VG

\$15/bulb

Trevanion Daffodils

08_318 Nightcap x Ballindalloch

GD

\$10/bulb

08_244 02_415 x Gold Bond (?)

Bulbs not of flowering size.

GD

\$10/bulb

04_199 ~2YYW-YYO Lemon Sails x 01_375 (Just-A-Dash x Ruddynosey)

VG

\$15/bulb

04_200 ~1YYW-Y Lemon Sails x 01_375 (Just-A-Dash x Ruddynosey)

GD

\$10/bulb

Naming Updates

The apodanthi cross *N. calcicola* x *N. watieri* has been named as a grex 'Yazbuttons'.

The intermediate 99_05D has been named "Lemon Gentleman".
