BOTANICAL MAGAZINE ADVERTISER.

SPECIAL NOTICE.

B. S. WILLIAMS

Respectfully informs his Customers and the Public generally, that on and after the 1st of January, 1866, his Counting-house, Seed Shop, Orchid Houses, Stoves, Greenhouses, and other Plant houses, will be removed to the VICTORIA NURSERY, Upper Holloway, near the Highgate Archway, and immediately at the foot of Highgate Hill; in which Nursery, in addition to the houses removed, he has just completed the erection of a large Show Conservatory and several new Plant Houses, forming a most complete Establishment; he will then make this his principal place of business, instead of Paradise Nursery as heretofore. The VICTORIA NURSERY is easy of access from all parts of London; the direct carriage-route from the West End is through Albany Street, Regent's Park, Park Street, Camden Town, Kentish Town Road, and the Junction Road. The 'Favorite' Omnibuses from the Bank and London Bridge Railways, Victoria Station, Charing Cross, and Westminster, Regent Street, Piccadilly, and Brompton, arrive at and start from the entrance of the Nursery every seven minutes.

In connection with the above announcement, B. S. W. invites inspection of his most extensive and valuable collection of rare Exotic and other Plants. Throughout the Winter, Spring, and early Summer months, a continuous show of flowering and ornamental plants will be maintained in the large Conservatory, sufficiently interesting to repay a visit at any time.

Victoria and Paradise Nurseries, Holloway, London, N.

SUTTON'S SPRING CATALOGUE

AND

AMATEUR'S GUIDE FOR 1866,

(ILLUSTRATED.) IN 4 PARTS.

PRICE SIXPENCE. GRATIS TO CUSTOMERS.

CONTENTS.

PART 1.—A comprehensive List of all the best kinds of Vegetables, with Instructions on Cultivation.

PART 2.—A comprehensive List of the most popular kinds of Flower Seeds, with Instructions on Cultivation, including an Illustrated List of Continental Novelties recently imported by Messrs. SUTTON.

PART 3.—A detailed List of Bulbous Flower Roots (for Spring planting), Stove, Greenhouse, and other Plants, Hardy Ferns, etc. etc.

PART 4.—A descriptive List of the most desirable kinds of Grass and other Agricultural Seeds, and Remarks on the New Forage Plant, BROMUS SCHRÆDERI.

ALSO

A Useful and Concise Calendar of Operations in the Kitchen Garden,

For the whole Year, written expressly for this Work.

ORIGINAL ARTICLES on the POTATO DISEASE, USE OF FROZEN MANGELS, etc.

AND A VALUABLE COLOURED RAILWAY MAP OF ENGLAND,

Containing important information.

SUTTON'S SHORT SELECT SEED LIST

Is also ready, and will be sent Gratis and Post Free on application.

J. TRAHERNE MOGGRIDGE.

IN PREPARATION.

A SECOND CENTURY OF ORCHIDACEOUS PLANTS,
selected from the subjects published in Curtis' 'Botanical Magazine' since
the issue of the 'First Century.' Edited by JAMES BATEMAN, Esq., F.R.S.

New Series of Natural History for Beginners.

BRITISH BEETLES; a Familiar Introduction to the study
of our Native COLEOPTERA. By E. C. RYE. Crown 8vo, 16 Coloured Plates,
and Wood-Engravings, 10s. 6d.

BRITISH SPIDERS; a Familiar Introduction to the study
of our Native ARACHNIDA. By E. F. STAVELEY. Crown 8vo, 16 Coloured
Plates, and Wood-Engravings, 10s. 6d.

BRITISH BEES; a Familiar Introduction to the study of
our Native BEES. By W. E. SCHUCKARD. Crown 8vo, 16 Coloured Plates,
and Wood-Engravings, 10s. 6d.

BRITISH BUTTERFLIES AND MOTHS; a Familiar
Introduction to the study of our Native LEPIDOPTERA. By H. T. STANTON.
Crown 8vo, 16 Coloured Plates, and Wood-Engravings, 10s. 6d.

BRITISH SEAWEEDS; a Familiar Introduction to the
study of our Native Marine ALGÆ. By S. O. GRAY. Crown 8vo, 16 Co-
loured Plates, and Wood-Engravings, 10s. 6d.

* * * A good introductory series of books on British Natural History for the
use of students and amateurs is still a *desideratum*. Those at present in use
have been too much compiled from antiquated sources; while the figures, copied
in many instances from sources equally antiquated, are far from accurate, the
colouring of them having become degenerated through the adoption, for the
sake of cheapness, of mechanical processes.

The present series will be entirely the result of original research carried to its
most advanced point; and the figures, which will be chiefly engraved on steel,
by the artist most highly renowned in each department for his technical know-
ledge of the subjects, will in all cases be drawn from actual specimens, and
coloured separately by hand.

LONDON:

LOVELL REEVE AND CO., 5, HENRIETTA STREET, COVENT GARDEN.

WORKS ON BOTANY.

- HANDBOOK OF THE BRITISH FLORA;** a Description of the Flowering Plants and Ferns indigenous to, or naturalized in, the British Isles. By G. BENTHAM, F.R.S., President of the Linnean Society. Crown 8vo.
-
- ILLUSTRATED EDITION,** with a Wood-Engraving, including dissections, of each species. Demy 8vo, 2 vols., 1295 Wood-Engravings, £3. 10s.
- THE FIELD BOTANIST'S COMPANION;** a Familiar Account, in the Four Seasons, of the most common of the Wild Flowering Plants of the British Isles. By THOMAS MOORE, F.L.S. One volume, Demy 8vo, 24 Coloured Plates, 21s.
- OUTLINES OF ELEMENTARY BOTANY,** as Introductory to Local Floras. By GEORGE BENTHAM, F.R.S., President of the Linnean Society. 2s. 6d.
- OUTLINES OF BRITISH FUNGOLOGY;** containing Characters of above a Thousand Species of Fungi, and a Complete List of all that have been described as Natives of the British Isles. By the Rev. M. J. BERKELEY, M.A., F.L.S. Demy 8vo, 24 Coloured Plates, 30s.
- THE ESCULENT FUNGUSES OF ENGLAND;** containing an Account of their Classical History, Uses, Characters, Development, Structure, Nutritious Properties, Modes of Cooking and Preserving, etc. By C. D. BADHAM, M.D. Second Edition. Edited by F. CURREY, F.R.S. Crown 8vo, 12 Coloured Plates, 12s.
- ILLUSTRATIONS OF BRITISH MYCOLOGY,** comprising Figures and Descriptions of the Funguses of interest and novelty indigenous to Britain. By Mrs. T. J. HUSSEY. Royal 4to; First Series, 90 Coloured Plates, £7. 12s. 6d.; Second Series, 50 Coloured Plates, £4. 10s.
- THE BRITISH FERNS:** Coloured Figures and Descriptions, with Analyses of the Fructification and Venation, of the Ferns of Great Britain and Ireland, systematically arranged. By Sir W. J. HOOKER, F.R.S. Royal 8vo, 66 Plates, £2. 2s.
- GARDEN FERNS:** Coloured Figures and Descriptions, with Analyses of the Fructification and Venation, of a Selection of Exotic Ferns, adapted for Cultivation in the Garden, Hothouse, and Conservatory. By Sir W. J. HOOKER, F.R.S. Royal 8vo, 64 Plates, £2. 2s.
- FILICES EXOTICÆ:** Coloured Figures and Description of Exotic Ferns, chiefly of such as are cultivated in the Royal Gardens of Kew. By Sir W. J. HOOKER, F.R.S. Royal 4to, 100 Plates, £6. 11s.
- HANDBOOK OF BRITISH MOSSES;** containing all that are known to be Natives of the British Isles. By the Rev. M. J. BERKELEY, M.A., F.L.S. Demy 8vo, 24 Coloured Plates, 21s.
- PHYCOLOGIA BRITANNICA:** History of British Seaweeds, containing Coloured Figures, Generic and Specific Characters, Synonyms and Descriptions of all the Species of Algæ inhabiting the Shores of the British Islands. By Dr. W. H. HARVEY, F.R.S. Royal 8vo, 4 vols., 360 Coloured Plates, £6. 6s.
- SYNOPSIS OF BRITISH SEAWEEDS,** compiled from Dr. Harvey's 'PHYCOLOGIA BRITANNICA.' 12mo, 5s.
- THE TOURIST'S FLORA;** a Descriptive Catalogue of the Flowering Plants and Ferns of the British Islands, France, Germany, Switzerland, Italy, and the Italian Islands. By JOSEPH WOODS, F.L.S. Demy 8vo, 18s.
- THE RHODODENDRONS OF SIKKIM-HIMALAYA;** being an Account, Botanical and Geographical, of the Rhododendrons recently discovered in the Mountains of Eastern Himalaya, from Drawings and Descriptions made on the spot, by Dr. J. D. HOOKER, F.R.S. By Sir W. J. HOOKER, F.R.S. Folio, 30 Coloured Plates, £3. 16s.
- PARKS AND PLEASURE GROUNDS;** or, Practical Notes on Country Residences, Villas, Public Parks, and Gardens. By CHARLES H. J. SMITH, Landscape Gardener. Crown 8vo, 6s.

RHODODENDRON HODGSONI.

Mr. Hodgson's Rhododendron.

Nat. Ord. ERICACEÆ.—DECANDRIA MONOGYNIA.

Gen. Char. (Vide supra, TAB. 4336.)

RHODODENDRON *Hodgsoni*; frutex robustus, ramis cortice papyraceo tectis, ramulis crassis tomentosiss, foliis amplis obovato-oblongis oblongisve obtusis supra glabris subtus tomento argenteo v. subrufo opertis, basi rotundatis subcordatisve, petiolis crassis, capitulis magnis multifloris densis, calyce obsolete, corolla late campanulata pallide purpurea 8-10-loba, staminibus 16-18, ovario pubescente 10-16-loculari.

RHODODENDRON *Hodgsoni*. *Hook. f. Sikkim Rhod. t. 15, et in Journ. Hort. Soc. Lond. v. 7. p. 76.*

RHODODENDRON sp. *Griff. Notulæ, v. 14. p. 303. Ic. t. 521.*

One of the noblest of the grand series of Rhododendrons that adorn the Eastern Himalayan mountains, discovered by Griffith in Bhotan in 1838, and gathered by myself in the alpine valleys of Eastern Nepal and Sikkim, at elevations of 10-12,000 feet. It flowered in the temperate house of Kew in April of last year. This is one of the finest of all the Rhododendrons in foliage; the trunk is remarkable for its pale brown papery bark, which flakes off in patches as broad as the hand; and the leaves often attain eighteen inches in length. Of the wood the mountaineers make spoons, cups, saddles, etc., and the leaves are used as platters for butter, curds, etc.

DESCR. A large shrub or almost a tree, ten to twenty feet high; main branches horizontal, almost as thick as the thigh; bark smooth, papery, flaking off; wood white, close-grained. *Leaves* ample, spreading, eight to eighteen inches long, oblong or oblong-obovate, obtuse or subacute, very coriaceous, glabrous and glossy above, beneath clothed with

silvery or ferruginous tomentum. *Heads* four to eight inches in diameter, of very numerous, crowded, pale purple flowers; *peduncles* short, viscid, and often downy. *Calyx* obscurely lobed or obsolete. *Corolla* broadly campanulate, one and a half to two and a half inches broad. *Stamens* sixteen to eighteen. *Ovary* pubescent; ten- to sixteen-celled; *style* stout; *stigma* rather large. *Capsule* narrow-linear, cylindrical, curved.

Fig. 1. Stamen. 2. Ovary, style, and stigma:—*natural size*. 3. Transverse section of ovary:—*magnified*.

W. Fitch, del. et lith.

Vincent Brooks, Imp

LÆLIA GRANDIS.

Large-flowered Lælia.

Nat. Ord. ORCHIDÆ.—GYNANDRIA MONANDRIA.

Gen. Char. (Vide supra, TAB. 4302.)

LÆLIA *grandis*; caule clavato monophyllo, folio coriaceo, pedunculo bifloro basi spathaceo longiore, floribus subhorizontalibus, sepalis lanceolatis reflexis, petalis late lanceolatis crispis convexis, labello membranaceo venoso nudo undulato trilobo, laciniis lateralibus circa columnam convolutis et multo longioribus. *Lindl.*

LÆLIA *grandis*. *Lindl. et Paxt. Fl. Gard. v. 1. n. 91, cum xylog.*

This fine *Lælia* first made its appearance in the establishment of M. Morel, of Paris, where it flowered in the spring of 1850. In the year following it was exhibited at one of the great London shows, but from that time it would seem to have entirely disappeared from our collections, until its reintroduction last year (1864) by Messrs. Hugh Low and Co., of the Clapton Nursery, who received a few plants of it from their collector at Bahia. From the same locality and about the same time, specimens were sent by Mr. Williams to the Royal Gardens at Kew, where one of them flowered finely in the summer of 1865, when it was drawn by Mr. Fitch for this work, in which the first coloured representation of the plant is now presented. Some slight discrepancies may be observed between Mr. Fitch's drawing and the woodcut in Paxton's Magazine, but these are readily accounted for by the circumstance that the former was made from fresh flowers, while the latter was taken from specimens that had probably suffered in their transmission to this country.

In its habit and the general aspect of its flowers *L. grandis*

is undistinguishable from the *Cattleyas*, to which—but for its eight pollen-masses—it would at once be referred. And even the latter structural distinction cannot be implicitly relied upon, for I have examined specimens of so-called *Laelias* in which all but two pair of pollen-masses were merely rudimentary. The circumstance of species of the two supposed genera breeding freely together—as has been proved by Mr. Dominy's experiments—is another fact pointing in the same direction, and goes far to justify Professor Reichenbach's opinion that they ought not any longer to be kept apart, except for the convenience of cultivators. *Lalia grandis* should be grown with the *Cattleyas*. It is easily managed, and flowers during the summer months.

DESCR. An epiphyte with stems under a foot high, narrow at the base, but swollen above, and bearing a solitary rigid leaf, which is rather broader at the base than at the point. *Peduncle* proceeding from an ample spathe, two-flowered. *Sepals* nankeen-coloured, lanceolate, about two inches long; *petals* rather wider in the middle than the sepals, and of the same colour, a little curled and in some cases toothed at the edges. *Lip* three-lobed, whitish with purple veins. *Column* entirely concealed by the side lobes of the lip, which are folded round it.

Fig. 1. Column. 2. Pollen-masses :—*magnified*.

W. Fitch, del et lith.

Vincent Brooks Imp

BEGONIA BACCATA.

Berried-fruited Begonia.

Nat. Ord. BEGONIACEÆ.—MONÆCIA POLYANDRIA.

Gen. Char. (Vide supra, TAB. 4172.)

BEGONIA *baccata*: herbacea, elata, monoica, robusta, caule petiolis pedunculisque breviter tomentosis, foliis late cordato-rotundatis abrupte acuminatis remote inæqualiter sinuato-dentatis subtus et utrinque secus nervos pubescentibus, stipulis amplis late oblongis obtusis deciduis, cymis brevibus axillaribus 6-8-floris, floribus magnis albis, sepalis utroque sexu 2 oblongo-rotundatis, antheris linearibus subemarginatis filamento gracili longioribus, ovario subgloboso obscure 5-6-sulcato 5-6-loculari, septis ramosis placentiferis, stylis 5-6 bicornutis cornubus tortis, fructu (ex Mannio) baccato indehiscente subgloboso, carnosio.

One of the most remarkable of the discoveries of our indefatigable collector, Gustav Mann, in the Bight of Benin, was a fine and robust Begonia, with a baccate fruit; of this, the subject of our present Plate, he sent living specimens to the Royal Garden in 1861, from the island of St. Thomas, which flowered in May of last year. The same collector also gathered it in Fernando Po, growing on an epiphyte at an altitude of 1300 feet. Like the very different, but scarcely less remarkable *B. prismatocarpa* (Tab. 5307), and the even more remarkable fern-leaved *B. aspleniifolia*, Hook. f. (A. DC. Prod. xv. 320), both also discovered by Mr. Mann, the *B. Mannii* stands alone as a section of the genus, differing from all described in A. De Candolle's elaborate monograph of the genus, in the baccate fruit and five- or six-celled ovary, in which the septa are deeply lobed, or almost branched and covered with ovules; for the details of this I am indebted to Mr. Fitch's careful drawing, not having had the opportunity of examining the plant when in flower.

DESCR. *Stems* tall, robust, as thick as the thumb, covered with ferruginous tomentum, as are the petioles, peduncles

and pedicels. *Leaves* six to ten inches long, very broadly orbicular-cordate, suddenly tapering to a long point, remotely toothed, glabrous except the nerves above, downy beneath. *Stipules* very large, broadly oblong, obtuse, deciduous. *Flowers* monœcious, in short axillary cymes, two and a half inches across, white in our specimen, white and pink in dried ones from Fernando Po. *Sepals* in both sexes two, broadly oblong, obtuse, concave. *Stamens* in one short compressed bundle, apparently seated on a flat receptacle; *anthers* narrow linear, obtuse, emarginate. *Ovary* nearly spherical, but somewhat urceolate, downy, obscurely five- or six-lobed, five- or six-celled, with deeply lobed dissepiments. *Styles* five or six, rather slender, with two horns, which are divaricating at the base, and twisted at their apices. *Fruit* described by Mr. Mann as a large, nearly spherical, fleshy, indehiscent berry.

Fig. 1. Stamen:—*magnified*. 2. Ovary and styles. 3. Transverse section of ovary. 4. Miniature fruit:—*nat. size*.

W. Fitch, del. et lith.

Vincent Brooks Imp.

SPARAXIS PULCHERRIMA.

Most beautiful Sparaxis.

Nat. Ord. IRIDÆ.—TRIANDRIA MONOGYNIA.

Gen. Char. Perigonium corollinum superum, infundibuliforme, tubo brevi gracili, limbi ampli 6-partiti laciniis subæqualibus stellatim patentibus rarius campanulatim conniventibus. Stamina 3, tubo perigonii inserta, adscendentia, inclusa, filamentis subulatis. Ovarium obtuse 3-gonum, 3-loculare; ovula plurima, in loculorum angulo centrali 2-seriata; stylus filiformis, stigmatibus 3 linearibus recurvis. Capsula membranacea, obsolete 3-gona, subtorulosa, 3-locularis, loculicide 3-valvis. Semina plurima, subglobosa.—Herbæ Capenses, rhizomate tuberoso-reticulato tunicato. Folia ensata, nervosa. Scapus simplex v. racemosus. Flores spicati, intra spatham 2-valvem membranaceam inclusi. Endl.

SPARAXIS *pulcherrima*; scapo gracillimo elato racemoso, foliis anguste ensiformibus sensim attenuato-acuminatis, ramis capillaribus elongatis dehis apice floriferis, bracteis elongato-subulatis subintegerrimis, bracteolis spathaceis longe acuminatis, floribus magnis purpureis, perianthio æquali campanulato.

For the introduction of this most lovely Cape bulb, we are indebted to the well-known unrivalled cultivators of hardy and half-hardy plants, Messrs. Backhouse, of York, who flowered it in October of the present year. The specimens were procured from the district between the Keiskamma and Buffalo rivers, on the eastern side of South Africa, and grew in a rich black soil. The plant is alluded to in the elder Backhouse's Missionary Narrative, p. 199. I have native specimens from the Albany district, Uitenhage, Assagaybosch, and Transvaal, all named *S. pendula*, which in habit it a good deal resembles; but the whole plant is much larger, the perianth campanulate, and the bracts very different in shape. A more lovely and graceful plant, from its extremely tall and slender stems and tiers of drooping flowers, cannot well be imagined.

DESCR. *Leaves* narrow ensiform. rather thick, about one-

third of an inch broad, gradually narrowed from below the middle to a very slender apex, rigid, erect. *Scape* exceedingly tall and slender, attaining six feet in its native habitat, racemosely branched above and drooping; *branches* remote, capillary, three to six inches long, curved from the weight of the pendulous flowers, which are clustered at their extremities. *Bracts* at the base of the branches one and a half inch long, very slender, subulate, entire; *bractlets* at the base of the flowers oblong-lanceolate, acuminate, somewhat laciniate, but less so than is usual in the genus. *Flowers* pendulous. *Perianth* equal, one and a half inch long, dark blood-purple, campanulate. *Ovary* turbinate.

Fig. 1. Reduced figure of whole plant. 2. Apex of scape:—*nat. size*.
3. Base. 4. Apex of leaf:—*nat. size*. 5. Ovary and stamens. 6. Ovary and style:—*both magnified*.

Vincent Brooks, Imp.

EPIDENDRUM MYRIANTHUM.

Many-flowered Epidendrum.

Nat. Ord. ORCHIDÆ.—GYNANDRIA MONANDRIA.

Gen. Char. (Vide supra, TAB. 4107.)

EPIDENDRUM (Amphiglottium, *Lindl.*) *myrianthum*; foliis lineari-lanceolatis acutis vaginis nigro-punctatis, paniculæ compositæ effusæ ramis divaricatis, bracteis setaceis, pedicellis ovariisque longissimis, sepalis membranaceis oblongis obtusis, petalis lineari-spathulatis, labello longiore 4-partito bicalloso laciniis truncatis linearibus æquilongis recurvis lateralibus subintegris, intermediis apice tantum laceris, clinandrio utrinque obtuso appendice dorsali membranaceâ cucullatâ bifidâ. *Lindl.*

EPIDENDRUM *myrianthum*. *Lindl. Fol. Orch.*

This most charming Epidendrum was discovered many years ago by Mr. Skinner at a very high elevation on the mountains of Guatemala, and a few of the specimens that he transmitted to this country have lingered in our collections, but—owing no doubt to their having been kept too warm—could never be induced to flower. As one of these happened to be still alive at Knypersley, though its shoots were no thicker than a crowquill, I directed it to be put in a cool house, in which some of the old and feeble stems speedily blossomed, and new shoots, thrice the strength of the others, almost immediately presented themselves. When these are sufficiently advanced, I have no doubt that masses of flowers will be produced, equal to the dried specimens preserved in the Lindleyan Herbarium (now at Kew), and which have assisted Mr. Fitch in preparing the representation on the opposite page.

The plant flowered in June last in one of the cool houses at Knypersley, and continued long in beauty. Some idea of its habit may be gathered from the reduced sketch in the Plate. The stems are about a yard high.—*J. B.*

MEDICAL WORKS.

8vo, fully Illustrated, price £1. 1s.,

ON THE MODERN TREATMENT of some DISEASES of the SKIN. By J. L. MILTON, Surgeon to St. John's Hospital for Skin Diseases.

LONDON: ROBERT HARDWICKE, 192, PICCADILLY.

SPECIAL NOTICE.

B. S. WILLIAMS

Respectfully informs his Customers and the Public generally, that on and after the 1st of January, 1866, his Counting-house, Seed Shop, Orchid-houses, Stoves, Greenhouses, and other Plant-houses, will be removed to the VICTORIA NURSERY, Upper Holloway, near the Highgate Archway, and immediately at the foot of Highgate Hill; in which Nursery, in addition to the houses removed, he has just completed the erection of a large Show Conservatory and several new Plant-houses, forming a most complete Establishment; he will then make this his principal place of business, instead of Paradise Nursery as heretofore. The VICTORIA NURSERY is easy of access from all parts of London; the direct carriage-route from the West End is through Albany Street, Regent's Park, Park Street, Camden Town, Kentish Town Road, and the Junction Road. The 'Favorite' Omnibuses from the Bank and London Bridge Railways, Victoria Station, Charing Cross, and Westminster, Regent Street, Piccadilly, and Brompton, arrive at and start from the entrance of the Nursery every seven minutes.

In connection with the above announcement, B. S. W. invites inspection of his most extensive and valuable collection of rare Exotic and other Plants. Throughout the Winter, Spring, and early Summer months, a continuous show of flowering and ornamental plants will be maintained in the large Conservatory, sufficiently interesting to repay a visit at any time.

Victoria and Paradise Nurseries, Holloway, London, N.

THE ONLY PRIZE MEDAL FOR
SEEDS,
INTERNATIONAL EXHIBITION
1862.

JAMES CARTER & CO.
GENUINE GARDEN SEEDS.

CARTER'S HALF-GUINEA BOX OF SEEDS will produce choice Vegetables all the year round.

CARTER'S GUINEA BOX OF SEEDS will produce choice Vegetables all the year round.

CARTER'S TWO-GUINEA BOX OF SEEDS will produce choice Vegetables all the year round.

THE ABOVE are suitable for Small, Medium, or Large Kitchen Gardens, and will be forwarded on receipt of Post Office Order.

CARTER'S GENUINE GARDEN SEEDS.—Price Lists gratis and post-free.

CARTER'S ILLUSTRATED GARDENERS' AND FARMERS' VADE MECUM containing a most extensive List of Flower, Vegetable, and Farm Seeds; also Calendar of Operations for Flower and Kitchen Gardens, together with copious remarks on Farm Management.

SHANKS' PATENT LAWN MOWERS FOR 1866.

Patronized on Five separate occasions, during the Season of 1864, by

HER MAJESTY THE QUEEN,

AND ONCE BY HIS MAJESTY THE KING OF SAXONY;

AGAIN ON FOUR SEPARATE OCCASIONS DURING THE SEASON OF 1865 BY HER MAJESTY THE QUEEN;

ONCE BY HIS MAJESTY THE KING OF HOLLAND;

AND ONCE BY HIS MAJESTY THE KING OF PRUSSIA.

HORSE MACHINE.

PONY MACHINE.

HAND MACHINE.

ALEXANDER SHANKS & SON, in presenting their LAWN MOWERS for the approaching Season, are gratified to be able to state that the demand for their celebrated Machines is rapidly increasing.

A. S. & SON, in introducing Improvements into their Machines, have been careful that no Improvement be introduced which has merely novelty to recommend it, but that the advantages in point of durability and simplicity of construction, which have always been a peculiarity of their Machines, should still remain.

A. S. & SON can confidently assure their numerous Friends and Customers and the Public generally that their endeavour will always be to supply a Machine, first-class in every way, one which cannot be surpassed if even equalled, whether for simplicity of construction, ease in working, or durability. None but the best materials and skilled workmen are employed in the manufacture of their Machines.

PRICES—Including Carriage to most of the principal Railway Stations and Shipping Ports in the Kingdom.

SHANKS' NEW PATENT HAND MACHINE FOR 1866.

10-inch Machine.....£3 10 0	} Easily worked by a Lady. Do. by a Boy. Do. by a Man.	19-inch Machine..... £7 12 6	{ Do. by a Man and a Boy. Do. by Two Men.

CHAMERANTHEMUM BEYRICHII; var. *variegata*.

Beyrich's Chameranthemum; variegated-leaved var.

Nat. Ord. ACANTHACEÆ.—DIDYNAMIA ANGIOSPERMIA.

Gen. Char. Calyx profunde 5-fidus, æqualis. Corolla hypocraterimorpha vel elongato-infundibuliformis, tubo longo gracili, limbo subæquali. Stamina 4 fertilia, infra os tubi paulove profundius inserta, inclusa, per paria basi contigua; antheræ staminum majorum 2-loculares, minorum 1-2-loculares. Capsula inferne depressa, valvis contiguis asperma, superius 2-locularis 4-sperma; depressimentum adnatum. Semina discoidea, retinaculis suffulta.—Herbæ v. suffrutices Brasilienses, habitu Eranthemis sed nani, floribus etiam minoribus. Spica floribus oppositis, parvibracteatibus. Nees in *De Cand. Prod.*

CHAMERANTHEMUM *Beyrichii*; caule petiolisque strigoso-tomentosis, foliis ovalibus oblongisve margine subscaberulis.

CHAMERANTHEMUM *Beyrichii*. Nees in *Lindl. Introd. ed. 2. p. 285, et in Mart. Fl. Bras. p. 155. t. 28.*

Var. *variegata*; foliis albo-variegatis.

The pretty plant here figured was sent to the Royal Garden by Mr. Bull, of Chelsea, in 1864, and flowered in March of the following year. It is a native of South Brazil, having been discovered by the traveller Beyrich, and since gathered by various collectors. According both to the description of Nees, and to our own specimens, it is a very variable plant in stature and in the form of the leaves. Nees describes a state with the leaves on long petioles, and their surface variegated with red; so that other showy forms may be worth cultivation, and one day find a place in our stoves.

DESCR. A rather slender herb, one to three feet high, sparingly branched. Stem and branches, peduncles and petioles, covered with strigose pubescence. Leaves shortly petioled, two to five inches long, oblong ovate-oblong or almost lanceolate-oblong, scarcely acute, minutely scabrid on the upper surface and margins, green or variegated with white.

Panicles strict, erect, branched, many-flowered; branches slender, elongate. *Bracts* small, shorter than the calyces. *Calyx-lobes* narrow, oblong-lanceolate, acute, glandular-pubescent. *Corolla* white, one and a half inch in diameter; *tube* rather slender, slightly curved; *lobes* of the limb longer than the tube, equal, spreading oblong, waved. *Stamens* united at the very base in pairs; *anthers* included, those of the longer stamens linear-oblong, with two unequal cells; those of the smaller, one-celled.—*J. D. H.*

Fig. 1. Calyx and style. 2. Tube of corolla, laid open. 3. Pair of stamens. 4. Ovary. 5. Young capsule:—all but *Fig. 5* magnified.

2.

W. Fitch, del. et lith.

Vincent Brooks sculp.

LUISIA PSYCHE.

Butterfly-flowered Luisia.

Nat. Ord. ORCHIDEÆ.—GYNANDRIA MONANDRIA.

Gen. Char. *Sepala* herbacea, linearia, lateralibus labello suppositis, dorsali minore. *Petala* dissimilia, tenuiora, sæpius longiora, patentissima vel fornicata. *Labellum* indivisum, sæpius auriculatum, cum columnâ continuum, dependens, inappendiculatum, nunc convexum, nunc concavum et medio constrictum. *Columna* nana, carnosâ, apoda. *Stigma* anticum, circulare, rostello obtuso obsoleto. *Pollinia* 2, cereacea, postice excavata; caudiculâ latâ brevi triangulari, glandulâ membranaceâ replicatâ. *Anthera* subrotunda, 2-ocularis, valvulis macilentis.—Herbæ *epiphytæ*, *caulescentes*, *erectæ*, *juncæ*, *Asiæ et Americæ tropicæ*. *Folia teretia, rigida*. *Flores parvi, obscure virides vel purpurascens*. Lindl.

LUISIA *Psyche*; foliis teretibus crassis, spicis brevissimis paucifloris, sepalo dorsali ligulato-fornicato, lateralibus angustioribus per dorsum carinatis, petalis cuneato-oblongis subacutis, labello basi utrinque auriculato, ante auriculas a basi utrinque minute semicordato transverse obovato subacuto, limbo minute lobulato. *Rehb. fil. in Gard. Chron.*

LUISIA *Psyche*. *Rehb. fil. in Mohl et Schlecht. Bot. Zeit.* 1863, p. 98, et in *Gard. Chron.* 1865 ('New Plants,' n. 312).

The genus *Luisia* consists almost exclusively of inconspicuous, taper-leaved plants, with much the habit of *Vanda teres*. There are, however, a few exceptions to the above rule, the most remarkable of which are an un-introduced plant (the *Luisia volucris* of Lindley) the flowers of which resemble birds with narrow outspread wings, and the species now figured for the first time, whose singular blossoms have quite an insect-like character.

It was discovered in Burmah by the Rev. C. S. Parish, by whom a few living specimens were sent to Messrs. Hugh Low and Co., of the Clapton Nursery. It is well described by Prof. Reichenbach, both in the 'Botanische Zeitung' of 1863, and in the 'Gardeners' Chronicle' of 1865. It grows

slowly, but is easily managed, and flowers freely during the spring and summer.

DESCR. *Plant* about a foot high. *Leaves* thick, round and tapering, six inches long. *Flowers* produced, two or three in succession, on a very short spike. *Sepals* and *petals* a pale yellowish-green, the dorsal sepal being more concave and broader than the side sepals, which are ligulate, keeled along the back, and blunt at their extremities, and not half the length of the petals; the latter, which hang down like the ears of a rabbit, are more than an inch long, cuneate-oblong, and rather sharp at the end. *Lip* not so long as the petals, fleshy, convex, with two auricles at its base, the portion above which is transversely obovate, and slightly cordate, its disk is beautifully marked—after the manner of some species of *Ophrys*—with dark violet-purple spots on a green ground. *Column* very dwarf.—*J. B.*

Fig. 1. Front view of flower. 2. Pollen-masses :—*magnified.*

2 3 4
 W. BENTLEY, del. et sculp.

THIBAUDIA CORDIFOLIA.

Cordate-leaved Thibaudia.

Nat. Ord. VACCINIÆ.—DECANDRIA MONOGYNIA.

Gen. Char. (Vide supra, TAB. 4303.)

THIBAUDIA *cordifolia*; ramulis glabratis teretibus, foliis breviter petiolatis oblongis obtusis integerrimis basi cordatis 5-7-plinerviis, petiolo pubescente, floribus subcapitatis, capitulis terminalibus nutantibus bracteis amplis oblongis concavis subsericeis involuocratis, floribus breviter pedicellatis, calycis tubo depresso, limbo breviter 5-dentato, corolla tubuloso-ventricosa extus pubescente, ore contracto 4-6-dentato, filamentis brevibus latis, antheris lineari-oblongis in tubum sulcatum elongatum apice 2-rimosum productis.

THIBAUDIA *cordifolia*. *H. B. and Kunth, Nov. Gen. et Sp. v. 3. p. 271. t. 255. De Cand. Prodr. v. 7. p. 563.*

PROCLISIA *cordifolia*. *Klotzsch in Linnæa, v. 24. p. 32.*

The beautiful plant here figured was exhibited by Mr. Bateman at the Horticultural Society, in December last, under the name of *Thibaudia Ocanensis*; it is clearly however the *T. cordifolia* of Kunth, a native of the alpine regions of the Andes of Bogotá, Merida, Caraccas, Loja, and other provinces of New Granada and Ecuador. According to an observation of Dr. Triana in our Herbarium, it is called "Uva de Anis" in the Bogotá Andes.

DESCR. A branched shrub, nearly glabrous, except on the tips of the branches, petioles, and inflorescence; *branches* terete, pubescent with spreading hairs towards the tips. *Leaves* one and a half to three inches long, coriaceous, ovate-oblong, obtuse, quite entire, margins slightly recurved, glabrous above, also below, or there covered with minute scattered glandular dots, five- to seven-nerved at the base; *petioles* very short, pubescent, as are the nerves slightly beneath. *Racemes* reduced to a crowded head of flowers, which is clothed at the

base with oblong, concave, imbricating, rather silky bracts. *Flowers* on short, pubescent peduncles and pedicels, nearly one inch long, bright-red, white at the mouth of the corolla. *Calyx-tube* sub-globose, but depressed, and almost truncate at the base; *teeth* five, short. *Corolla* tubular, but ventricose, between cylindric and oblong, much contracted at the mouth, with five short, spreading lobes. *Stamens* with very short broad filaments, and long, oblong anthers, their cells terminating in a long, straight, double tube, which opens by two anticus, subterminal slits. The flowers are occasionally tetramerous or hexamerous. *J. D. H.*

Fig. 1. Flower. 2. Calyx, ovary, and style. 3 and 4. Anthers :—*all magnified.*

BAUHINIA TOMENTOSA; var. *glabra*.

Downy Bauhinia; glabrous var.

Nat. Ord. LEGUMINOSÆ.—DIADELPHIA DECANDRIA.

Gen. Char. Calycis tubus brevis v. elongatus, limbus ante anthesin apice clausus v. contractus, per anthesin varie fissus. Petala 5, parum inæqualia, imbricata, summo intimo. Stamina 10 v. pauciora, libera v. breviter connata; antheræ versatiles, longitudinaliter dehiscentes. Ovarium sæpissime stipitatum; stylus brevis v. elongatus. Legumen oblongum v. lineare, rectum v. obliquum, indehiscens v. 2-valve, intus continuum v. septatum. Semina compressa, albuminosa; cotyledones planæ; radícula brevis.—Arbores v. frutices erectæ v. scandentes, interdum cirrhiferæ. Folia simplicia, 2-loba v. 2-foliolata. Flores racemosi, corymbosi v. paniculati.

BAUHINIA *tomentosa*; fruticosa, inermis, pubescenti-tomentosa v. glabrata, foliis basi cordatis rotundatis v. truncatis ad medium 2-lobis, lobis obtusis 3-nerviis, pedunculis 1-2-floris, calyce spathaceo tubo brevi, petalis flavis obovatis v. obcordatis, staminibus 10, fertilibus fere liberis, ovario stipitato, legumine tenui plano lineari basin versus sensim angustato venoso acuto.

BAUHINIA *tomentosa*. Linn. *Sp. Pl.* p. 536. De Cand. *Prod.* v. 2. p. 514. *Burm. Zeyl.* p. 44. t. 18. *Harv. et Sond. Fl. Cap.* v. 2. p. 275.

Var. *glabrata*; tota tenuiter pubescens v. glabrata.

This handsome shrub was introduced to the Royal Gardens, Kew, by M. Monteiro, who sent seeds in 1860 from Bembe, in Benguela, the plants from which flowered in our stoves in November of last year. The species itself (of which this is rather a glabrous form) is a native of Ceylon, Malabar, and other parts of India; it is also commonly cultivated in the tropics of both the old and new worlds. In Africa, it is also found in Natal; by Kirk at Senna, during Livingstone's late expedition; and in the interior of Dammara Land, by Baines and Chapman.

DESCR. A slender shrub in our stoves, four to five feet high, with long, rather pendulous branches, the branchlets, petioles, under surface of the leaves, and inflorescence glabrous

or pubescent. *Leaves* nearly orbicular in circumscription, one to two and a half inches in diameter, two-lobed to the middle, rounded cordate or truncate at the base; *lobes* obtuse, each three- to four-nerved; *petioles* slender; *stipules* subulate. *Racemes* small, few-flowered, terminal. *Flowers* pale golden-yellow, with a deep-purple blotch at the base of the upper petal. *Calyx* spathaceous, rather short. *Petals* obovate or obcordate, concave, connivent. *Stamens* ten, all fertile, nearly free. *Legume* flat, linear, but gradually narrowed downwards, acute, glabrous or puberulous.—*J. D. H.*

Fig. 1. Calyx and stamen. 2. Ovary and base of calyx with the stamens removed:—*both magnified.*

EULOPHIA EUGLOSSA.

Pretty-lipped Eulophia.

Nat. Ord. ORCHIDÆ.—GYNANDRIA MONANDRIA.

Gen. Char. Perianthium explanatum, sepalis petalisque ascendentibus, subæqualibus, aut omnino liberis, aut cum ungue magis minusve producto columnæ connatis. Labellum cornutum, aut brevius calcaratum, sessile, venis cristatis, barbatis vel omnino brevibus, sæpius trilobum, nunc indivisum. Columna semiteres, marginata. Anthera 1-2-locularis. Pollinia 2, postice biloba vel cava, caudiculâ lineari brevi, glandulâ transversâ.—Herbæ terrestres, pseudobulosæ. Folia longa, membranacea, plicata vel pluries costata. Scapi radicales, multiflori. *Lindl. Gen. et Sp.*

EULOPHIA *euglossa*; pseudobulbo elongato sursum attenuato, foliis cuneato-oblongis acutis, pedunculo basi vaginato racemoso, bracteis lineari-lanceis setaceo-acuminatis flores excedentibus, mento modico, sepalis petalisque ligulatis acuminatis subæqualibus, labello trifido, laciniis lateralibus acutangulis, laciniâ mediâ semioblongâ acutâ hinc undulatâ, carinulis obscuris geminis in disco inter lacinias posticas, calcar subclavato, ovarii pedicellati dimidiam non attingente, antherâ apice tumidâ obtusâ. *Rehb. fil.*

GALEANDRA *euglossa*. *Rehb. fil. in Bot. Zeitung* (1852), v. 9. p. 35. *Lindl. West Afr. Orchids, Proceed. Linn. Soc. (May, 1862.)*

This singular plant was sent to Kew by Mr. G. Mann, from the banks of the Old Calabar river, on which—as indeed on all the streams that form the great delta of the Niger—Orchids seem to abound. Unfortunately they rarely possess sufficient beauty to recommend them to the notice of the cultivator, as is the case with our present *Eulophia* which, notwithstanding its prettily-marked lip, can by no means be considered an attractive object. Its long pseudobulbs, tapering from the base upwards, are in their shape and appearance not unlike the fossil *Calamites* that are found so plentifully in the different beds of the New Red Sandstone, and with which we are all of us familiar.

E. euglossa was so named by Prof. Reichenbach, who met with it originally among some undetermined species from the

West Coast of Africa, in Dr. Lindley's Herbarium. It seems to have been first introduced by the Messrs. Loddiges, then it was sent to Consul Schiller, and still more recently, as already noted, to the Royal Gardens at Kew, where it happened the other day to be in bloom when the great German Orchidist visited that establishment and drew up the description that I have had much pleasure in transcribing.

This *Eulophia*, like its congeners, is a terrestrial plant, and must be treated accordingly. Coming as it does from one of the sultriest regions on the earth's surface, it will of course require a good deal of heat.—*J. B.*

DESCR. *Pseudobulbs* a span or more high, cylindrical, tapering in a fusiform manner at the end. *Leaves* cuneate, oblong, acute, a foot long. *Peduncle* elongate, with scales beneath, racemose at the top. *Raceme* many-flowered, flowers distant. *Bracts* linear-lanceolate, very acuminate, longer than the flowers. *Sepals* and *petals* lanceolate, acuminate, nearly equal, spreading, green. *Lip* trifid, lateral segments semi-ovate, acute, greenish-yellow, middle segment semi-oblong, acute, somewhat crisp, white, with some radiating purple streaks on the base, and with two carinae between the posterior segments. *Spur* clavate, green, not half the length of the pedicellate ovary. *Column* clavate. *Anther* with a terminal umbo.—*Rchb. fil.*

Fig. 1. Side view of lip. 2. Front view of ditto. 3. Column. 4. Pollen-masses:—*magnified.*

TILLANDSIA XIPHIODES.

Buenos Ayres Air-plant.

Nat. Ord. BROMELIACEÆ.—HEXANDRIA MONOGYNIA.

Gen. Char. Calyc 3-partitus, laciniis subæqualibus. Petala 3 unguibus in tubum conniventibus v. convolutis, limbo patente. Stamina 6, hypogyna, filamentis linearibus alternis sæpius petalis adhærentibus. Ovarium liberum, 3-loculare; stylus filiformis, stigmatibus 3-fido, ovulis in loculorum angulo centrali 2-seriatim affixis. Capsula cartilaginea, linearis v. ovata, 3-locularis, loculicida 3-valvis, valvis endocarpio mox soluto duplicatis, explanatis v. tortis. Semina plurima, ex basi septorum erecta, stipitata, stipite pilis papillosis cincto; testa dura.—Herbæ plerumque epiphytæ lepidota. Caules foliosi. Flores spicati v. paniculati, bracteati, rarius solitarii. Endl.

TILLANDSIA xiphioides; tota argenteo-tomentosa, foliis dense rosulatis patenti-incurvis, e basi lata longe late subulatis marginibus incurvis v. involutis, scapo brevi v. elongato simplici, spica disticha lineariblonga multiflora, bracteis anguste oblongo-lanceolatis acuminatis dense imbricatis, floribus albis, sepalis anguste subulato-lanceolatis attenuato-acuminatis, petalorum ungue elongato-lineari, lamina oblongo-obovata acuminata recurva crispata, stigmatibus lobis brevibus linearibus recurvis.

TILLANDSIA xiphioides. Ker in Bot. Reg. t. 105.

A remarkably pretty and deliciously-scented plant, for which the Royal Gardens are indebted to Dr. Rayner, of Uxbridge, who sent the flowering specimen figured here in May, 1865; it is called by Ker a native of Buenos Ayres, but the only native specimens I have were gathered by the late Dr. Gillies, near Mendoza, where it is abundant on trees and stones along the bases of the Cordillera, and is much prized for its delicate fragrance.

DESCR. A small rigid herb, covered with grey silvery to-

mentum. *Leaves* crowded, rosulate, four to six inches long, half an inch broad at the base, broadly subulate with recurved margins that are involute at the tip. *Scape* long or short. *Spike* three to four inches long, distichous, compressed, of many closely imbricating, linear-oblong bracts, two inches long. *Flowers* numerous, snow-white. *Sepals* linear lanceolate, acuminate. *Petals* with a slender, linear claw, one inch long, and broadly obovate acuminate, reflexed white, crisped blade.—*J. D. H.*

Fig 1. Calyx, style, and stigma. 2 Petal and stamen. 3. Ovary:—*all magnified.*

HANDBOOK OF THE BRITISH FLORA; a Description of the Flowering Plants and Ferns indigenous to, or naturalized in, the British Isles. For the Use of Beginners and Amateurs. By GEORGE BENTHAM, F.R.S., President of the Linnean Society. Crown 8vo, 680 pp., 12s.

Distinguished for its terse and clear style of description; for the introduction of a system of Analytical Keys, which enable the student to determine the family and genus of a plant at once by the observation of its more striking characters; and for the valuable information here given for the first time of the geographical range of each species in foreign countries. "A work," says the 'Gardeners' Chronicle,' "which, for the soundness of the views which it is calculated to impress, and the facilities it offers for accurate diagnosis, we should wish to see in the hands of every student."

HANDBOOK OF THE BRITISH FLORA, ILLUSTRATED EDITION; a Description (with a Wood-Engraving, including dissections, of each species) of the Flowering Plants and Ferns indigenous to, or naturalized in, the British Isles. For the Use of Beginners and Amateurs. By GEORGE BENTHAM, F.R.S., President of the Linnean Society. Demy 8vo, 2 vols., 1154 pp., 1295 Wood-Engravings, £3. 10s.

An illustrated edition of the foregoing Work, in which every species is accompanied by an elaborate Wood-Engraving of the Plant, with dissections of its leading structural peculiarities. The Work is expanded in this edition into two volumes of 1154 pages, with 1295 Engravings, from original drawings by W. Fitch, forming by far the cheapest and most compact illustrated Encyclopædia of the British Flora that has yet appeared.

THE FIELD BOTANIST'S COMPANION; a Familiar Account, in the Fine Seasons, of the most common of the Wild Flowering Plants of the British Isles. By THOMAS MOORE, F.L.S. One volume, Demy 8vo, 424 pp. With 24 Coloured Plates, by W. FREN, 21s.

An elegantly-illustrated volume, intended for Beginners, describing the plants most readily gathered in our fields and hedge-rows, with the progress of the seasons. Descriptions of the parts of the flowers are introduced among the Figures, so that an insight may be readily obtained not only of the Species and name of each plant, but of its structure and characters of classification.

THE TOURIST'S FLORA; a Descriptive Catalogue of the Flowering Plants and Ferns of the British Islands, France, Germany, Switzerland, Italy, and the Italian Islands. By JOSEPH WOODS, F.L.S. Demy 8vo, 504 pp., 18s.

Designed to enable the lover of botany to determine the names of any wild plants he may meet with while journeying in our own country and the countries of the Continent most frequented by tourists. The author's aim has been to make the descriptions clear and distinct, and to comprise them within a volume of not inconvenient bulk.

CONTRIBUTIONS TO THE FLORA OF MENTONE. By J. TEAHERNE MOURRIER. Royal 8vo. Parts I and II, each, 25 Coloured Plates, 15s.

In this work a full page is devoted to the illustration of each Species, the drawings being made by the author from specimens collected by him on the spot, and they exhibit in vivid colours the beautiful aspect which many of our wild flowers assume south of the Alps.

A FLORA OF ULSTER, AND BOTANIST'S GUIDE TO THE NORTH OF IRELAND. By G. DICKIE, M.D., F.L.S., Professor of Botany in the University of Aberdeen. A pocket volume, pp. 176, 3s.

A small volume, not exclusively of local interest, containing, as it does, much valuable information relative to the geographical and altitudinal range of the Species.

VICTORIA REGIA; or, Illustrations of the Royal Water Lily, in a series of Figures chiefly made from Specimens flowering at Syon and at Kew, by W. FREN, with Descriptions by Sir W. J. HOOKER, F.R.S. Elephant folio, 21s.

A superb series of illustrations of this wonderful plant, with an elaborate series of dissections.

CURTIS'S BOTANICAL MAGAZINE, comprising the Plants of the Royal Gardens of Kew, and of other Botanical Establishments. By Dr. J. D. HOOKER, F.R.S., Director of the Royal Gardens, Royal Soc. Published Monthly, with 6 Plates, 3s. 6d. coloured. Price of the complete work:—First Series, 53 vols. bound in 32, £16. 16s. Second Series, 17 vols., £28. 7s. Third Series, 21 vols., £11. 2s. Vol. XXII. (being Vol. XCII. of the entire work) in course of publication.

Descriptions and Drawings, beautifully coloured by hand, of newly-discovered plants suitable for cultivation in the Garden, Hothouse, or Conservatory.

THE FLORAL MAGAZINE, containing Figures and Descriptions of New Popular Garden Flowers. By the Rev. H. HONEYWOOD DOMBRAIS, A.B. Imperial Soc. Published Monthly, with 4 Plates, 2s. 6d. coloured. Vol. I. to IV., each with 64 plates, £2. 2s.

Descriptions and Drawings, beautifully coloured by hand, of new varieties of Flowers raised by the nurserymen for cultivation in the Garden, Hothouse, or Conservatory.

THE RHODODENDRONS OF SIKKIM-HIMALAYA; being an Account, Botanical and Geographical, of the Rhododendrons recently discovered in the Mountains of Eastern Himalaya, from Drawings and Descriptions made on the spot, by Dr. J. D. Hooker, F.R.S. By Sir W. J. HOOKER, F.R.S. Folio, 30 Coloured Plates, £3. 16s.

Illustrations on a superb scale of the new Sikkim Rhododendrons, now being cultivated in England, accompanied by copious observations on their distribution and habits.

MONOGRAPH OF ODONTOGLOSSUM, a Genus of the Vandaceous Section of Orchidaceous Plants. By JAMES BATEMAN, Esq., F.R.S. Imperial folio. Parts I. to III., each with 5 Coloured Plates, and occasional Wood Engravings, 21s.

Designed for the illustration, on an unusually magnificent scale, of the new and beautiful plants of this favoured genus of *Orchidaceae*, which are being now imported from the mountain-chains of Mexico, Central America, New Granada, and Peru.

PESCATOREA. Figures of Orchidaceous Plants, chiefly from the Collection of M. PESCATORE. Edited by M. LINDEN, with the assistance of MM. G. LUDDERMAN, J. E. PLANCHON, and M. G. REICHENBACH. Folio, Parts I. to XII., each, 4 Coloured Plates, 7s.

GENERA PLANTARUM, ad Exemplaria imprimis in Herbariis Kewensibus servata delicta. By GEORGE HURTHER, F.R.S., President of the Linnean Society, and Dr. J. D. HOOKER, F.R.S., Assistant-Director of the Royal Gardens, Kew. Vol. I. Part I. pp. 454. Royal 8vo, 21s. Part II., 14s.

This important work comprehends an entire revision and reconstruction of the *Genera of Plants*. Unlike the former *Genera Plantarum* of Kuhnber, which is now out of print, it is founded on a personal study of every genus by one or both authors. The First Part contains 50 Natural Orders and 1287 Genera. The Second, now printing, will contain as many more. The whole will be completed in Four or Five Parts.

FLORA OF THE ANTARCTIC ISLANDS; being Part I. of the Botany of the Antarctic Voyages of H.M. Discovery Ships 'Erebus' and 'Terror,' in the years 1839-1843. By Dr. J. D. HOOKER, F.R.S. Royal 4to. 2 vols., 574 pp., 200 Plates, £10. 16s. coloured. Published under the authority of the Lords Commissioners of the Admiralty.

The 'Flora Antarctica' illustrates the Botany of the southern districts of South America and the various Antarctic Islands, as the Falklands, Kerguelen's Land, Lord Auckland and Campbell's Island, and 1370 species are enumerated and described. The plates, which are executed by Mr. Fitch, and beautifully coloured, illustrate 370 species, including a vast number of exquisite forms of Mosses and Seaweeds.

FLORA OF NEW ZEALAND; being Part II. of the Botany of the Antarctic Voyages of H.M. Discovery Ships 'Erebus' and 'Terror,' in the years 1839-1843. By Dr. J. D. HOOKER, F.R.S. Royal 4to. 2 vols., 733 pp., 130 Plates. (One copy only remaining, £10. 16s. coloured.) Published under the authority of the Lords Commissioners of the Admiralty.

The 'Flora of New Zealand' contains detailed descriptions of all the plants, flowering and flowerless, of that group of Islands, collected by the Author during Sir James Ross' Antarctic Expedition; including also the collections of Cook's three voyages, Vancouver's voyages, etc., and most of them previously unpublished. The species described amount to 1757; and of the Plates, which illustrate 313 species, many are devoted to the Mosses, Ferns, and Alga, in which these Islands abound.

FLORA OF TASMANIA; being Part III. of the Botany of the Antarctic Voyages of H.M. Discovery Ships 'Erebus' and 'Terror,' in the years 1839-1843. By Dr. J. D. HOOKER, F.R.S. Royal 4to. 2 vols., 972 pp., 200 Plates, £17. 10s., coloured. Published under the authority of the Lords Commissioners of the Admiralty.

The 'Flora of Tasmania' describes all the Plants, flowering and flowerless, of that Island, consisting of 2303 species, collected by the Author and others. The Plates, of which there are 200, illustrate 412 species.

HANDBOOK OF THE NEW ZEALAND FLORA; a

Systematic Description of the Native Plants of New Zealand, and the Chatham, Kermadec's, Lord Auckland's, Campbell's, and Macquarrie's Islands. By Dr. J. D. HOOKER, F.R.S. Demy 8vo, Part I., 475 pp., 16s. Published under the auspices of the Government of that colony.

A compendious account of the plants of New Zealand and outlying islands, published under the authority of the Government of that colony. The present Part contains the Flowering Plants, Ferns, and Lycopods; the Second Part, containing the remaining Orders of *Cryptogamia*, or Flowerless Plants, with Index and Catalogues of Native Names and of Naturalized Plants, will appear shortly.

FLORA AUSTRALIENSIS; a Description of the Plants of

the Australian Territory. By GEORGE BENTHAM, F.R.S., President of the Linnean Society, assisted by FERDINAND MUELLER, F.R.S., Government Botanist, Melbourne, Victoria. Demy 8vo. Vol. I. 566 pp., and vol. II. 530 pp., 20s. each. Published under the auspices of the several Governments of Australia.

Of this great undertaking, the present volumes, of more than a thousand closely-printed pages, comprise about one-fourth. The materials are derived not only from the vast collections of Australian plants brought to this country by various botanical travellers, and preserved in the herbaria of Kew and of the British Museum, including those hitherto unpublished of Banks and Solander, of Captain Cook's first Voyage, and of Brown in Flinders', but from the very extensive and more recently collected specimens preserved in the Government Herbarium of Melbourne, under the superintendence of Dr. Ferdinand Mueller. The descriptions are written in plain English, and are masterpieces of accuracy and clearness.

FLORA HONGKONGENSIS; a Description of the Flow-

ering Plants and Ferns of the Island of Hongkong. By GEORGE BENTHAM, F.R.S. With a Map of the Island. Demy 8vo, 550 pp., 16s. Published under the authority of Her Majesty's Secretary of State for the Colonies.

The Island of Hongkong, though occupying an area of scarcely thirty square miles, is characterized by an extraordinary varied Flora, partaking, however, of that of South Continental China, of which comparatively little is known. The number of Species enumerated in the present volume is 1056, derived chiefly from materials collected by Mr. Hinds, Col. Champion, Dr. Hance, Dr. Harland, Mr. Wright, and Mr. Wilford.

FLORA OF THE BRITISH WEST INDIAN ISLANDS.

By Dr. GRISEBACH, F.L.S. Demy 8vo, 806 pp., 37s. 6d. Published under the auspices of the Secretary of State for the Colonies.

Containing complete systematic descriptions of the Flowering Plants and Ferns of the British West Indian Islands, accompanied by an elaborate index of reference, and a list of Colonial names.

FLORA VITIENSIS; a Description of the Plants of the Viti or Fiji Islands, with an Account of their History, Uses, and Properties. By Dr. BERTHOLD SEEMANN, F.L.S. Royal 4to, Parts I. to III. each, 10 Coloured Plates, 15s. To be completed in 10 Parts.

This work owes its origin to the Government Mission to Viti, to which the author was attached as naturalist. In addition to the specimens collected, the author has investigated all the Polynesian collections of Plants brought to this country by various botanical explorers since the voyage of Captain Cook.

ILLUSTRATIONS OF THE NUEVA QUINOLOGIA OF PAVON, with Observations on the Barks described. By J. E. HOWARD, F.L.S. With 27 Coloured Plates by W. FITCH. Imperial folio, half-morocco, gilt edges, £6. 6s.

A superbly-coloured volume, illustrative of the most recent researches of Pavon and his associates among the Cinchona Barks of Peru, founded mainly on a manuscript and collection of specimens which were sold shortly before Pavon's death to a botanist of Madrid, from whom they passed into the hands of the author.

ILLUSTRATIONS OF SIKKIM-HIMALAYAN PLANTS, chiefly selected from Drawings made in Sikkim, under the superintendence of the late J. F. CATHCART, Esq., Bengal Civil Service. The Botanical Descriptions and Analyses by Dr. J. D. HOOKER, F.R.S. Imperial folio, 24 Coloured Plates and an Illuminated Title-page by W. FITCH, £5. 5s.

As an example of botanical drawing, colouring, and design, this work has never been surpassed. Only a few copies remain.

THE LONDON JOURNAL OF BOTANY. Original Papers by eminent Botanists, Letters from Botanical Travellers, etc. Vol. VII., completing the Series. Demy 8vo, 23 Plates, 30s.

JOURNAL OF BOTANY AND KEW MISCELLANY. Original Papers by eminent Botanists, Letters from Botanical Travellers, etc. Edited by Sir W. J. HOOKER, F.R.S. Vols. IV. to IX., Demy 8vo, 12 Plates, £1. 4s. A Complete Set of 9 vols., half-calf, *scarce*, £10. 16s.

ICONES PLANTARUM. Figures, with brief Descriptive Characters and Remarks, of New and Rare Plants, selected from the Author's Herbarium. By Sir W. J. HOOKER, F.R.S. New Series. Vol. V., Royal 8vo, 100 plates, 31s. 6d.

FERNS AND MOSSES.

THE BRITISH FERNS; or, Coloured Figures and Descriptions, with the needful Analyses of the Fructification and Venation, of the Ferns of Great Britain and Ireland, systematically arranged. By Sir W. J. HOOKER, F.R.S. Royal 8vo, 66 Plates, £2. 2s.

The British Ferns and their allies are illustrated in this work, from the pencil of Mr. FITCH. Each Species has a Plate to itself, so that there is ample room for the details, on a magnified scale, of Fructification and Venation. The whole are delicately coloured by hand. In the letterpress an interesting account is given with each species of its geographical distribution in other countries.

GARDEN FERNS; or, Coloured Figures and Descriptions, with the needful Analyses of the Fructification and Venation, of a Selection of Exotic Ferns, adapted for Cultivation in the Garden, Hothouse, and Conservatory. By Sir W. J. HOOKER, F.R.S. Royal 8vo, 64 Plates, £2. 2s.

A companion volume to the preceding, for the use of those who take an interest in the cultivation of some of the more beautiful and remarkable varieties of Exotic Ferns. Here also each Species has a Plate to itself, and the details of Fructification and Venation are given on a magnified scale, the Drawings being from the pencil of Mr. FITCH.

FILICES EXOTICÆ; or, Coloured Figures and Description of Exotic Ferns, chiefly of such as are cultivated in the Royal Gardens of Kew. By Sir W. J. HOOKER, F.R.S. Royal 4to, 100 Plates, £6. 11s.

One of the most superbly illustrated books of Foreign Ferns that has been hitherto produced. The Species are selected both on account of their beauty of form, singular structure, and their suitableness for cultivation.

FERNY COMBES; a Ramble after Ferns in the Glens and Valleys of Devonshire. By CHARLOTTE CHANTER. *Second Edition.* Fcp. 8vo, 8 coloured plates by Fitch, and a Map of the County, 5s.

HANDBOOK OF BRITISH MOSSES, containing all that are known to be Natives of the British Isles. By the Rev. M. J. BERKELEY, M.A., F.L.S. Demy 8vo, pp. 360. 24 Coloured Plates, 21s.

A very complete Manual, comprising characters of all the species, with the circumstances of habitation of each, with special chapters on development and structure, propagation, fructification, geographical distribution, uses, and modes of collecting and preserving, followed by an extensive series of coloured illustrations, in which the essential portions of the plant are repeated, in every case on a magnified scale.

SEAWEEDS.

PHYCOLOGIA BRITANNICA; or, History of British Seaweeds, containing Coloured Figures, Generic and Specific Characters, Synonyms and Descriptions of all the Species of Algæ inhabiting the Shores of the British Islands. By Dr. W. H. HARVEY, F.R.S. Royal 8vo, 4 vols., 765 pp., 360 Coloured Plates, £6. 6s. Reissue in Monthly Parts, each 2s. 6d.

This work, originally published in 1851, at the price of £7. 10s., is still the standard work on the subject of which it treats. Each Species, excepting the minute ones, has a Plate to itself, with magnified portions of structure and fructification, the whole being printed in their natural colours, finished by hand.

SYNOPSIS OF BRITISH SEAWEEDS, compiled from Dr. Harvey's 'PHYCOLOGIA BRITANNICA.' Small 8vo, 220 pp., 5s.

A Descriptive Catalogue of all the British Seaweeds, condensed from the 'Phycologia Britannica.' It comprises the characters, synonyms, habitats, and general observations, forming an extremely useful pocket volume of reference.

PHYCOLOGIA AUSTRALICA; a History of Australian Seaweeds, comprising Coloured Figures and Descriptions of the more characteristic Marine Algæ of New South Wales, Victoria, Tasmania, South Australia and Western Australia, and a Synopsis of all known Australian Algæ. By Dr. HARVEY, F.R.S. Royal 8vo, 5 vols., 300 Coloured Plates, £7. 13s.

This beautiful work, the result of an arduous personal exploration of the shores of the Australian continent, is got up in the style of the 'Phycologia Britannica' by the same author. Each Species has a Plate to itself, with ample magnified delineations of fructification and structure, embodying a variety of most curious and remarkable forms.

NEREIS AUSTRALIS; or, Algæ of the Southern Ocean, being Figures and Descriptions of Marine Plants collected on the Shores of the Cape of Good Hope, the extra-tropical Australian Colonies, Tasmania, New Zealand, and the Antarctic Regions. By Dr. HARVEY, F.R.S. Imperial 8vo, 50 Coloured Plates, £2. 2s.

A selection of Fifty Species of remarkable forms of Seaweed, not included in the 'Phycologia Australica,' collected over a wider area.

FUNGI.

OUTLINES OF BRITISH FUNGOLOGY, containing Characters of above a Thousand Species of Fungi, and a Complete List of all that have been described as Natives of the British Isles. By the Rev. M. J. BERKELEY, M.A., F.L.S. Demy 8vo, 484 pp., 24 Coloured Plates, 30s.

Although entitled simply 'Outlines,' this is a good-sized volume, of nearly 500 pages, illustrated with more than 200 Figures of British Fungi, all carefully coloured by hand. Of above a thousand Species the characters are given, and a complete list of the names of all the rest.

THE ESCULENT FUNGUSES OF ENGLAND. Containing an Account of their Classical History, Uses, Characters, Development, Structure, Nutritious Properties, Modes of Cooking and Preserving, etc. By C. D. BADHAM, M.D. Second Edition. Edited by F. CURREY, F.R.S. Demy 8vo, 152 pp., 12 Coloured Plates, 12s.

A lively classical treatise, written with considerable epigrammatic humour, with the view of showing that we have upwards of 30 Species of Fungi abounding in our woods capable of affording nutritious and savoury food, but which, from ignorance or prejudice, are left to perish ungathered. "I have indeed grieved," says the Author, "when reflecting on the straitened condition of the lower orders, to see pounds of extempore beefsteaks growing on our oaks, in the shape of *Fistulina hepatica*; Puff-balls which some have not inaptly compared to sweetbread; *Hydna*, as good as oysters; and *Agaricus deliciosus*, reminding us of tender lamb-kidney." Superior coloured Figures of the Species are given from the pencil of Mr. Fitch.

ILLUSTRATIONS OF BRITISH MYCOLOGY, comprising Figures and Descriptions of the Funguses of interest and novelty indigenous to Britain. By Mrs. T. J. HUSSEY. Royal 4to; First Series, 90 Coloured Plates, £7. 12s. 6d.; Second Series, 50 Coloured Plates, £4. 10s.

This beautifully-illustrated work is the production of a lady who, being an accomplished artist, occupied the leisure of many years in accumulating a portfolio of exquisite drawings of the more attractive forms and varieties of British Fungi. The publication was brought to an end with the 140th Plate by her sudden decease. The Figures are mostly of the natural size, carefully coloured by hand.

ILLUSTRATIONS OF THE FUNGI OF OUR FIELDS AND WOODS. Drawn from Natural Specimens, by SARAH PRICE. Royal 4to, First and Second Series, 10 Coloured Plates, 21s. each.

A selection from a portfolio of Drawings of Fungi made in the neighbourhood of Shropshire.

SHELLS AND MOLLUSKS.

ELEMENTS OF CONCHOLOGY; an Introduction to the Natural History of Shells, and of the Animals which form them. By **LOVELL REEVE, F.L.S.** Royal 8vo, 2 vols., 478 pp., 62 Coloured Plates, £2. 16s.

Intended as a guide to the collector of shells in arranging and naming his specimens, while at the same time inducing him to study them with reference to their once living existence, geographical distribution, and habits. Forty-six of the plates are devoted to the illustration of the genera of shells, and sixteen to shells with the living animal, all beautifully coloured by hand.

THE LAND AND FRESHWATER MOLLUSKS indigenous to, or naturalized in, the British Isles. By **LOVELL REEVE, F.L.S.** Crown 8vo, 295 pp., Map, and 160 Wood-Engravings, 10s. 6d.

A complete history of the British Land and Freshwater Shells, and of the Animals which form them, illustrated by Wood-Engravings of all the Species. Other features of the work are an Analytical Key, showing at a glance the natural groups of families and genera, copious Tables and a Map illustrative of geographical distribution and habits, and a chapter on the Distribution and Origin of Species.

CONCHOLOGIA ICONICA; or, Figures and Descriptions of the Shells of Mollusks, with remarks on their Affinities, Synonymy, and Geographical Distribution. By **LOVELL REEVE, F.L.S.** Demy 4to, published monthly in Parts, 8 Plates, carefully coloured by hand, 10s.

Of this work, comprising illustrations of Shells of the natural size, nearly 2000 Plates are published, but the plan of publication admits of the collector purchasing it at his option in portions, each of which is complete in itself. Each genus, as the work progresses, is issued separately, with Title and Index; and an Alphabetical List of the published genera, with the prices annexed, may be procured of the publishers on application. The system of nomenclature adopted is that of Lamarek, modified to meet the exigencies of later discoveries. With the name of each species is given a summary of its leading specific characters in Latin and English; then the authority for the name is quoted, accompanied by a reference to its original description; and next in order are its Synonyms. The habitat of the species is next given, accompanied, where possible, by particulars of soil, depth, or vegetation. Finally, a few general remarks are offered, calling attention to the most obvious distinguishing peculiarities of the species, with criticisms, where necessary, on the views of other writers. At the commencement of the genus some notice is taken of the animal, and the habitats of the species are worked up into a general summary of the geographical distribution of the genus.

CONCHOLOGIA SYSTEMATICA; or, Complete System of Conchology. By LOVELL REEVE, F.L.S. Demy 4to, 2 vols. pp. 537, 300 Plates, £8. 8s. coloured.

Of this work only a few copies remain. It is a useful companion to the collector of shells, on account of the very large number of specimens figured, as many as six plates being devoted in some instances to the illustration of a single genus.

INSECTS.

CURTIS' BRITISH ENTOMOLOGY. Illustrations and Descriptions of the Genera of Insects found in Great Britain and Ireland, containing Coloured Figures, from nature, of the most rare and beautiful species, and, in many instances, upon the plants on which they are found. Royal 8vo, 8 vols., 770 Plates, coloured, £16. 16s.

Or in separate Monographs.

A Reissue of the Orders Coleoptera, Diptera, Hymenoptera, and Lepidoptera, in Monthly Parts, each containing 5 Plates, with text, price 2s. 6d., commenced January 1st, 1863.

'Curtis' Entomology,' which Cuvier pronounced to have "reached the ultimatum of perfection," is still the standard work on the Genera of British Insects. The Figures executed by the author himself, with wonderful minuteness and accuracy, have never been surpassed, even if equalled. The price at which the work was originally published was £13. 16s.

INSECTA BRITANNICA; Vols. II. and III., Diptera. By FRANCIS WALKER, F.L.S. 8vo, each, with 10 plates, 25s.

TRAVELS.

THREE CITIES IN RUSSIA. By Professor C. PIAZZI SMYTH, F.R.S. Post 8vo, 2 Vols., 1016 pp. Maps and Wood-Engravings, 26s.

The narrative of a tour made in the summer of 1859 by the Astronomer Royal of Scotland, to the cities of St. Petersburg, Moscow, and Novgorod.

THE GATE OF THE PACIFIC. By Commander BEDFORD PIM, R.N. Demy 8vo, 430 pp., with 7 Maps and 8 Tinted Chromo-Lithographs, 18s.

A spirited narrative of Commander Pim's explorations in Central America, made with the view of establishing a new overland route from the Atlantic to the Pacific Oceans, through English enterprise, by way of Nicaragua.

TRAVELS ON THE AMAZON AND RIO NEGRO; with an Account of the Native Tribes, and Observations on the Climate, Geology, and Natural History of the Amazon Valley. By ALFRED R. WALLACE. Demy 8vo, 541 pp., with Map and Tinted Frontispiece, 18s.

A lively narrative of travels in one of the most interesting districts of the Southern Hemisphere, accompanied by Remarks on the Vocabularies of the Languages, by Dr. R. G. LATHAM.

WESTERN HIMALAYA AND TIBET; a Narrative of a Journey through the Mountains of Northern India, during the Years 1847-1848. By Dr. THOMSON, F.R.S. Demy 8vo, 500 pp., with Map and Tinted Frontispiece, 15s.

A summary of the physical features, chiefly botanical and geological, of the country travelled over in a mission undertaken for the Indian Government, from Simla across the Himalayan Mountains into Tibet, and to the summit of the Karakoram Mountains; including also an excellent description of Kashmir.

TRAVELS IN THE INTERIOR OF BRAZIL, principally through the Northern Provinces and the Gold and Diamond Districts, during the years 1836-1841. By Dr. GEORGE GARDNER, F.L.S. Second Edition. Demy 8vo, 428 pp., with Map and Tinted Frontispiece, 12s.

The narrative of an arduous journey, undertaken by an enthusiastic naturalist, through Brazil Proper, Bahia, Maranhão, and Pernambuco, written in a lively style, with glowing descriptions of the grandeur of the vegetation.

ANTIQUARIAN.

MAN'S AGE IN THE WORLD ACCORDING TO HOLY SCRIPTURE AND SCIENCE. By an Essex Rector. Demy 8vo, 264 pp., 8s. 6d.

THE ANTIQUITY OF MAN. An Examination of Sir Charles Lyell's recent Work. By S. R. PATTERSON, F.G.S. Second Edition. 8vo, 1s.

HORÆ FERÆLES: or, Studies in the Archaeology of the Northern Nations. By the late JOHN M. KEMBLE, M.A. Edited by Dr. R. G. LATHAM, F.R.S., and A. W. FRANKS, M.A. Royal 4to, 263 pp., 34 Plates, many coloured, £3. 3s.

The principal material left by the late Mr. Kemble for this work was an extensive and interesting series of drawings, and the thirty-four Plates consist of a selection from these, with some important additions, described and figured under the superintendance of the Director of the Society of Antiquaries. The objects delineated comprise Stone Implements and Weapons, Axes and Hammers, Bronze Implements, Arrow-Heads, Spears, Daggers, Swords, Shields, Helmets and Trumpets, Iron Daggers and Swords, Iron-headed Horse-Trappings, Bronze Horse-Trappings, Fibulae, Armlets, Diadems, Collars and Personal Ornaments, Teutonic Swords, Weapons and Brooches, and a variety of Urns and other sepulchral objects.

A MANUAL OF BRITISH ARCHÆOLOGY. By CHARLES BOUTELL, M.A. Royal 16mo, 398 pp., 20 coloured plates, 10s. 6d.

A treatise on general subjects of antiquity, written especially for the student of archæology, as a preparation for more elaborate works. Architecture, Sepulchral Monuments, Heraldry, Seals, Coins, Illuminated Manuscripts and Inscriptions, Arms and Armour, Costume and Personal Ornaments, Pottery, Porcelain and Glass, Clocks, Locks, Carvings, Mosaics, Embroidery, etc., are treated of in succession, the whole being illustrated by 20 attractive Plates of Coloured Figures of the various objects.

SHAKESPEARE'S SONNETS, Facsimile, by Photo-Zinco-graphy, of the First Printed edition of 1609. From the Copy in the Library of Bridgewater House, by permission of the Right Hon. the Earl of Ellesmere. 10s. 6d.

MISCELLANEOUS.

MANUAL OF CHEMICAL ANALYSIS, Qualitative and Quantitative: for the Use of Students. By Dr. HENRY M. NOAD, F.R.S. Crown 8vo, pp. 663, 109 Wood Engravings, 16s. Or, separately, Part I., 'QUALITATIVE,' 6s.; Part II., 'QUANTITATIVE,' 10s. 6d.

A Copiously-illustrated, Useful, Practical Manual of Chemical Analysis, prepared for the Use of Students by the Lecturer on Chemistry at St. George's Hospital. The illustrations consist of a series of highly-finished Wood-Engravings, chiefly of the most approved forms and varieties of apparatus.

DICTIONARY OF NATURAL HISTORY TERMS, with their Derivatives, including the various Orders, Genera, and Species. By DAVID H. M'NICOLL, M.D. Crown 8vo, 584 pp., 12s. 6d.

An attempt to furnish what has long been a desideratum in natural history,—a dictionary of technical terms, with their meanings and derivatives.

PHOSPHORESCENCE; or, the Emission of Light by Minerals, Plants, and Animals. By Dr. T. L. PURSON, F.C.S. Small 8vo, 225 pp., 30 Wood Engravings and Coloured Frontispiece, 5s.

An interesting summary of the various phosphoric phenomena that have been observed in nature,—in the mineral, in the vegetable, and in the animal world.

A SURVEY OF THE EARLY GEOGRAPHY OF WESTERN EUROPE, as connected with the First Inhabitants of Britain, their Origin, Language, Religious Rites, and Edifices. By HENRY LAWES LONG, Esq. 8vo, 6s.

THE ZOOLOGY OF THE VOYAGE OF H.M.S. SAMARANG, under the command of Captain Sir Edward Belcher, C.B., during the Years 1843-46. By Professor OWEN, Dr. J. E. GRAY, Sir J. RICHARDSON, A. ADAMS, L. REEVE, and A. WHITE. Edited by ARTHUR ADAMS, F.L.S. Royal 4to, 257 pp., 55 Plates, mostly coloured. £3. 10s.

In this work, illustrative of the new species of animals collected during the surveying expedition of H.M.S. Samarang in the Eastern Seas in the years 1843-1846, there are 7 Plates of Quadrupeds, 1 of Reptiles, 10 of Fishes, 24 of Mollusca and Shells, and 13 of Crustacea. The Mollusca, which are particularly interesting, include the anatomy of *Spirula* by Professor Owen, and a number of beautiful Figures of the living animals by Mr. Arthur Adams.

THE GEOLOGIST. A Magazine of Geology, Palaeontology, and Mineralogy. Illustrated with highly finished Wood-Engravings. Edited by S. J. MACNIE, F.G.S., F.S.A. Vols. V. and VI., each, with numerous Wood-Engravings, 18s. Vol. VII., 9s.

OUTLINES OF ELEMENTARY BOTANY, as Introductory to Local Floras. By GEORGE BENTHAM, F.R.S., President of the Linnean Society. Demy 8vo, pp. 45, 2s. 6d.

ON THE FLORA OF AUSTRALIA, its Origin, Affinities, and Distribution, being an Introductory Essay to the 'Flora of Tasmania.' By Dr. J. D. HOOKER, F.R.S. 128 pp., quarto, 10s.

CRYPTOGAMIA ANTARCTICA; or, Cryptogamic Plants of the Antarctic Islands. Issued separately. In One Volume, quarto, £4. 4s. coloured; £2. 17s. plain.

GUIDE TO COOL-ORCHID GROWING. By JAMES BATEMAN, Esq., F.R.S., Author of 'The Orchidaceae of Mexico and Guatemala.' Woodcuts, 1s.

A TREATISE ON THE GROWTH AND FUTURE TREATMENT OF TIMBER TREES. By G. W. NEWTON, of Ollersett, J.P. Half-bound calf, 10s. 6d.

PARKS AND PLEASURE GROUNDS; or, Practical Notes on Country Residences, Villas, Public Parks, and Gardens. By CHARLES H. J. SMITH, Landscape Gardener. Crown 8vo, 6s.

LITERARY PAPERS ON SCIENTIFIC SUBJECTS. By the late Professor EDWARD FORBES, F.R.S., selected from his Writings in the 'Literary Gazette.' With a Portrait and Memoir. Small 8vo, 6s.

THE PLANETARY AND STELLAR UNIVERSE. A Series of Lectures. With Illustrations. By R. J. MANN. 12mo, 5s.

THE STEREOSCOPIIC MAGAZINE. A Gallery for the Stereoscope of Landscape Scenery, Architecture, Antiquities, Natural History, Rustic Character, etc. With Descriptions. 5 vols., each complete in itself and containing 50 Stereographs, £2. 2s.

THE CONWAY. Narrative of a Walking Tour in North Wales; accompanied by Descriptive and Historical Notes. By J. B. DAVIDSON, Esq., M.A. Extra gilt, 20 stereographs of Welsh Scenery, 21s.

THE ARTIFICIAL PRODUCTION OF FISH. By PISCARIUS. Third Edition. 1s.

WORKS IN PREPARATION.

A SECOND CENTURY OF ORCHIDACEOUS PLANTS, selected from the subjects published in Curtis' 'Botanical Magazine' since the issue of the 'First Century.' Edited by JAMES BATEMAN, Esq., F.R.S. [*Part I. just ready.*]

During the fifteen years that have elapsed since the publication of the 'Century of Orchidaceous Plants,' now out of print, the 'Botanical Magazine' has been the means of introducing to the public nearly two hundred of this favourite tribe of plants not hitherto described and figured, or very imperfectly so. It is intended from these to select "a Second Century," and the descriptions, written at the time of publication by Sir W. J. Hooker, will be edited, agreeably with the present more advanced state of our knowledge and experience in the cultivation of Orchidaceous plants, by Mr. Bateman, the acknowledged successor of Dr. Lindley as the leading authority in this department of botany and horticulture. The size of the work will be a handsome royal quarto, and it is proposed to issue the hundred plates in ten quarterly Parts, each containing ten plates, carefully coloured by hand, price 10s. 6d.

THE BEWICK COLLECTOR. A Descriptive Catalogue of an Unique Collection of the Works of THOMAS and JOHN BEWICK, of Newcastle-upon-Tyne. By the Rev. THOMAS HUGO, M.A., F.S.A., the Possessor of the Collection. Demy 8vo, with a limited number, not exceeding 100, printed on large paper. [*Nearly ready.*]

This volume will comprise an elaborate Descriptive List of the most complete collection yet formed of the works of the renowned Wood-Engravers of Newcastle-upon-Tyne. It will include their books and book-illustrations, proofs of such in various states, and the engravings, with similar proofs, by Thomas Bewick, executed for private gentlemen, public companies, newspapers, exhibitions, bill-heads, broadsides, and other miscellaneous purposes, with much original matter connected with the artists and their productions.

Commencement of a New Series of Natural History
for Beginners.

BRITISH BEETLES; a Familiar Introduction to the study of our Native COLEOPTERA. By E. C. RYE. Crown 8vo, 16 Coloured Plates, and Wood-Engravings, 10s. 6d. [Just ready.]

BRITISH SPIDERS; a Familiar Introduction to the study of our Native ARACHNIDA. By E. F. STAVELEY. Crown 8vo, 16 Coloured Plates and Wood-Engravings, 10s. 6d. [Nearly ready.]

BRITISH BEES; a Familiar Introduction to the study of our Native Bees. By W. E. SCHUCKARD. Crown 8vo, 16 Coloured Plates, and Wood-Engravings, 10s. 6d. [Nearly ready.]

BRITISH BUTTERFLIES AND MOTHS; a Familiar Introduction to the study of our Native LEPIDOPTERA. By H. T. STAINTON. Crown 8vo, 16 Coloured Plates, and Wood-Engravings, 10s. 6d. [In preparation.]

BRITISH FERNS: a Familiar Introduction to the Study of our Native Ferns and their Allies. By MARGARET PLUES. Crown 8vo, 16 Coloured Plates, and Wood-Engravings, 10s. 6d. [In the Press.]

BRITISH SEAWEEDS; a Familiar Introduction to the study of our Native Marine ALGÆ. By S. O. GRAY. Crown 8vo, 16 Coloured Plates, and Wood-Engravings, 10s. 6d. [In preparation.]

* * * A good introductory series of books on British Natural History for the use of students and amateurs is still a *desideratum*. Those at present in use have been too much compiled from antiquated sources: while the figures, copied in many instances from sources equally antiquated, are far from accurate, the colouring of them having become degenerated through the adoption, for the sake of cheapness, of mechanical processes.

The present series will be entirely the result of original research carried to its most advanced point; and the figures, which will be chiefly engraved on steel, by the artist most highly renowned in each department for his technical knowledge of the subjects, will in all cases be drawn from actual specimens, and coloured separately by hand.

LONDON:

LOVELL REEVE & CO., 5, HENRIETTA STREET, COVENT GARDEN.

Third Series.

No. 255.

VOL. XXII. MARCH.

[Price 3s. 6d. col^d. 2s. 6d. plain.]

OR No. 950 OF THE ENTIRE WORK.

CURTIS'S
BOTANICAL MAGAZINE,

COMPRISING

THE PLANTS OF THE ROYAL GARDENS OF KEW,
AND OF OTHER BOTANICAL ESTABLISHMENTS IN GREAT BRITAIN,
WITH SUITABLE DESCRIPTIONS;

BY

JOSEPH DALTON HOOKER, M.D., F.R.S. L.S. & G.S.,

Director of the Royal Botanic Gardens of Kew.

~~~~~  
Nature and Art to adorn the page combine,  
And flowers exotic grace our northern clime.  
~~~~~

LONDON:

LOVELL REEVE & CO., 5, HENRIETTA STREET, COVENT GARDEN.

1866.

THE HYDROPULT,

AN INVENTION FOR THROWING WATER BY HAND-POWER.

(SECURED BY ROYAL LETTERS PATENT.)

Weighs but 8 lbs.

Will throw 7 or 8 Gallons of Water per minute 50 feet, when worked by the power of one Man.

PRICE LIST.

Complete with Brass Cylinders and Japanned Stirrup, £1. 12s. 6d.

Complete with Brass Cylinders and Copper Stirrup, £2. 2s.

The price, "complete" as above, includes 2½ feet Suction, and 3 feet Delivery Hose, Galvanized Wire Strainer, Rose, and Small Jet.

THE HYDROPULT

Is invaluable for use in the Garden for

WATERING BEDS,
SPRINKLING PLANTS,
DROWNING OUT INSECTS,
CLEANSING TREES FROM SMUTS,
DRESSING WITH LIQUID MANURE, ETC. ETC.

THE HYDROPULT

Is desirable in every Household for

WASHING WINDOWS.
WETTING SIDE WALKS,
SPRINKLING STREETS,
WASHING CARRIAGES,
EMPTYING CISTERNS,
FILLING BARRELS
A SPRAY BATH, ETC. ETC.

ORDERED BY THE WAR DEPARTMENT AS FIRE ENGINES.

ROBERT HOGG, LL.D. & F.L.S., REV. H. DOMBRAIN, A.B., SHIRLEY HIBBERD, ESQ., F.R.H.S., THOMAS RIVERS, ESQ. (the eminent Florist), and other well-known gentlemen, recommend the Hydropult as an Invaluable Garden Implement.

The Hydropult will draw water horizontally, if necessary, through Two Hundred Feet Suction Hose, and force it through Delivery Hose to an altitude of One Hundred Feet.

THE GREENHOUSE AND CONSERVATORY HYDROPULT.

A NEW AND BEAUTIFUL IMPLEMENT,

Weighing scarcely 5 lbs.

And specially adapted for use in the Greenhouse and Conservatory.

Price 35s.

Complete, with Brass Cylinders and Copper Stirrup, 2½ feet Suction and 3 feet Delivery Hose, Strainer, Rose Jet, and Fan.

This New Implement must necessarily supersede Syringes and other devices of the kind, for it will be found much more effective in its operation.

A LADY CAN WORK IT FOR HOURS WITHOUT FATIGUE.

CAUTION.—Important to the Public.—The extensive sale of the Hydropult has excited the cupidity of so-called respectable, but in reality unprincipled Manufacturers, who are now palming on the Public worthless imitations of the Hydropult, and through their connections are enabled to place said devices on exhibition, and for sale, in many of the principal Ironmongery and Seed Establishments throughout the City and provinces. These devices resemble in many respects the Hydropult in appearance, and are calculated to deceive the unsuspecting. The Proprietor, therefore, issues this Caution, and respectfully intimates that parties wishing to purchase the Hydropult should examine the machine offered for sale, and see if it has attached thereto a label, with the following words:—"The Hydropult, Vose's Patent, manufactured only by GRIFFITHS & BROWITT, Birmingham. CHARLES POMEROY BUTTON, Proprietor, & and 143, Cheapside, London." Unless this label is attached, the machine is not the Hydropult.

PROSPECTUSES, WITH TESTIMONIALS, ON APPLICATION.

HYDROPULT SHOW-ROOM, 142 & 143, CHEAPSIDE, LONDON.

CHARLES POMEROY BUTTON, PROPRIETOR.

BOTANICAL MAGAZINE ADVERTISER.

SHANKS' PATENT LAWN MOWERS FOR 1866.

Patronized on Five separate occasions, during the Season of 1864, by

HER MAJESTY THE QUEEN,

AND ONCE BY HIS MAJESTY THE KING OF SAXONY;

AGAIN ON FOUR SEPARATE OCCASIONS DURING THE SEASON OF 1865 BY HER MAJESTY THE QUEEN;

ONCE BY HIS MAJESTY THE KING OF HOLLAND;

AND ONCE BY HIS MAJESTY THE KING OF PRUSSIA.

HORSE MACHINE.

PONY MACHINE.

HAND MACHINE.

ALEXANDER SHANKS & SON, in presenting their LAWN MOWERS for the approaching Season, are gratified to be able to state that the demand for their celebrated Machines is rapidly increasing.

A. S. & SON, in introducing Improvements into their Machines, have been careful that no Improvement be introduced which has merely novelty to recommend it, but that the advantages in point of durability and simplicity of construction, which have always been a peculiarity of their Machines, should still remain.

A. S. & SON can confidently assure their numerous Friends and Customers and the Public generally that their endeavour will always be to supply a Machine, first-class in every way, one which cannot be surpassed if even equalled, whether for simplicity of construction, ease in working, or durability. None but the best materials and skilled workmen are employed in the manufacture of their Machines.

PRICES—Including Carriage to most of the principal Railway Stations and Shipping Ports in the Kingdom.

SHANKS' NEW PATENT HAND MACHINE FOR 1866.

		" 48 "	30 0 0		

The 26, 28, and 30 inches can easily be worked by a donkey, or by two men, on an even lawn, the 30 and 36 inches by a pony, and 42 and 48 inches by a carriage horse; and, as the Machines make no noise in working, the most spirited animal can be employed without fear of its running away, or in any way damaging the Machine.

Both the Horse, Pony, Donkey, and Hand Machines possess (over all other Makers) the advantages of self-sharpening: the cutters being steel on each side, when they become dull or blunt by running one way round the cylinder, can be reversed again and again, bringing the opposite edge of the cutter against the bottom blade, when the Machine will cut equal to new. Arrangements are made that the cylinder can be reversed, by any unexperienced person, in two or three minutes.

The above Machines are made from the best materials, and of superior workmanship; are delivered Carriage Free to all the principal Railway Stations and Shipping Ports in England.

SPECIAL NOTICE.

B. S. WILLIAMS

Respectfully informs his Customers and the Public generally, that on and after the 1st of January, 1866, his Counting-house, Seed Shop, Orchid-houses, Stoves, Greenhouses, and other Plant-houses, will be removed to the VICTORIA NURSERY, Upper Holloway, near the Highgate Archway, and immediately at the foot of Highgate Hill; in which Nursery, in addition to the houses removed, he has just completed the erection of a large Show Conservatory and several new Plant-houses, forming a most complete Establishment; he will then make this his principal place of business, instead of Paradise Nursery as heretofore. The VICTORIA NURSERY is easy of access from all parts of London; the direct carriage-route from the West End is through Albany Street, Regent's Park, Park Street, Camden Town, Kentish Town Road, and the Junction Road. The 'Favorite' Omnibuses from the Bank and London Bridge Railways, Victoria Station, Charing Cross, and Westminster, Regent Street, Piccadilly, and Brompton, arrive at and start from the entrance of the Nursery every seven minutes.

In connection with the above announcement, B. S. W. invites inspection of his most extensive and valuable collection of rare Exotic and other Plants. Throughout the Winter, Spring, and early Summer months, a continuous show of flowering and ornamental plants will be maintained in the large Conservatory, sufficiently interesting to repay a visit at any time.

Victoria and Paradise Nurseries, Holloway, London, N.

THE ONLY PRIZE MEDAL FOR
SEEDS,
INTERNATIONAL EXHIBITION
1862.

JAMES CARTER & CO.
GENUINE GARDEN SEEDS.

CARTER'S HALF-GUINEA BOX OF SEEDS will produce choice Vegetables all the year round.

CARTER'S GUINEA BOX OF SEEDS will produce choice Vegetables all the year round.

CARTER'S TWO-GUINEA BOX OF SEEDS will produce choice Vegetables all the year round.

THE ABOVE are suitable for Small, Medium, or Large Kitchen Gardens, and will be forwarded on receipt of Post Office Order.

CARTER'S GENUINE GARDEN SEEDS.—Price Lists gratis and post-free.

CARTER'S ILLUSTRATED GARDENERS' AND FARMERS' VADE MECUM, containing a most extensive List of Flower, Vegetable, and Farm Seeds; also a Calendar of Operations for Flower and Kitchen Gardens, together with copious remarks on Farm Management.

THE "OLD" CHESHUNT NURSERIES, N.

**E. G. HENDERSON AND SON'S
CATALOGUE FOR JANUARY, 1866,**

Is published, containing descriptive notes and other information of all the best *novelties* of this season, a copy of which will be forwarded, post-free, on application.

WELLINGTON NURSERY, ST. JOHN'S WOOD, LONDON, N.W.

WILLIAM CUTBUSH & SON

HAVE the gratification of announcing that their GRAND EXHIBITION of HYACINTHS and other Spring Flowers will be held at their

NURSERIES, HIGHGATE,

from TUESDAY, the 20th, to SATURDAY, the 31st MARCH, 1866, both days inclusive. *Admission free*, from 10 A.M. till dusk.

The Nurseries are easy of access by Omnibus from London Bridge Station, the Bank, Holborn, Tottenham Court Road, Islington, and Charing Cross, to the foot of the Hill, from thence a distance of about ten minutes' walk. The Kentish Town Station, on the North London Railway, is one mile from the Nurseries.

SUTTON'S SPRING CATALOGUE

AND

AMATEUR'S GUIDE FOR 1866,

(ILLUSTRATED.) In 4 PARTS.

PRICE SIXPENCE. GRATIS TO CUSTOMERS.

CONTENTS.

PART 1.—A comprehensive List of all the best kinds of Vegetables, with Instructions on Cultivation.

PART 2.—A comprehensive List of the most popular kinds of Flower Seeds, with Instructions on Cultivation, including an Illustrated List of Continental Novelties recently imported by Messrs. SUTTON.

PART 3.—A detailed List of Bulbous Flower Roots (for Spring planting), Stove, Greenhouse, and other Plants, Hardy Ferns, etc. etc.

PART 4.—A descriptive List of the most desirable kinds of Grass and other Agricultural Seeds, and Remarks on the New Forage Plant, BROMUS SCHRÆDERI.

ALSO

A Useful and Concise Calendar of Operations in the Kitchen Garden,

For the whole Year, written expressly for this Work.

ORIGINAL ARTICLES on the POTATO DISEASE, USE OF FROZEN MANGELS, etc.

AND A VALUABLE COLOURED RAILWAY MAP OF ENGLAND,

Containing important information.

SUTTON'S SHORT SELECT SEED LIST

Is also ready, and will be sent Gratis and Post Free on application.

FERNS AND MOSSES.**THE BRITISH FERNS;** or, Coloured Figures and Descriptions, with the needful Analyses of the Fructification and Venation, of the Ferns of Great Britain and Ireland, systematically arranged. By Sir W. J. HOOKER, F.R.S. Royal 8vo, 66 Plates, £2. 2s.

The British Ferns and their allies are illustrated in this work, from the pencil of Mr. FITCH. Each Species has a Plate to itself, so that there is ample room for the details, on a magnified scale, of Fructification and Venation. The whole are delicately coloured by hand. In the letterpress an interesting account is given with each species of its geographical distribution in other countries.

GARDEN FERNS; or, Coloured Figures and Descriptions, with the needful Analyses of the Fructification and Venation, of a Selection of Exotic Ferns, adapted for Cultivation in the Garden, Hothouse, and Conservatory. By Sir W. J. HOOKER, F.R.S. Royal 8vo, 64 Plates, £2. 2s.

A companion volume to the preceding, for the use of those who take an interest in the cultivation of some of the more beautiful and remarkable varieties of Exotic Ferns. Here also each Species has a plate to itself, and the details of Fructification and Venation are given on a magnified scale, the Drawings being from the pencil of Mr. FITCH.

FERNY COMBES; a Ramble after Ferns in the Glens and Valleys of Devonshire. By CHARLOTTE CHANTER. *Second Edition.* Fcp. 8vo, 8 coloured plates by Fitch, and a Map of the County, 5s.**HANDBOOK OF BRITISH MOSSES,** containing all that are known to be Natives of the British Isles. By the Rev. M. J. BERKELEY, M.A., F.L.S. Demy 8vo, pp. 360, 24 Coloured Plates, 21s.

A very complete Manual, comprising characters of all the species, with the circumstances of habitation of each; with special chapters on development and structure, propagation, fructification, geographical distribution, uses, and modes of collecting and preserving, followed by an extensive series of coloured illustrations, in which the essential portions of the plant are repeated, in every case on a magnified scale.

LOVELL REEVE & CO., 5, HENRIETTA STREET, COVENT GARDEN.

STANDARD WORKS ON BRITISH FUNGI.

Just published, New and Cheaper Edition, with 12 Coloured Plates, price 12s.,

THE ESCULENT FUNGUSES OF ENGLAND.

AN ACCOUNT OF THEIR CLASSICAL HISTORY, USES, CHARACTERS,
DEVELOPMENT, STRUCTURE, NUTRITIOUS PROPERTIES, MODES
OF COOKING AND PRESERVING, ETC.

By C. D. BADHAM, M.D.

NEW EDITION, Edited by F. CURREY, M.A., F.R.S., F.L.S.

Just published, in broad octavo, 480 pages, with 24 Coloured Plates, cloth, 30s.,

OUTLINES OF BRITISH FUNGOLOGY;

CONTAINING CHARACTERS OF ABOVE A THOUSAND SPECIES OF FUNGI,
AND A COMPLETE LIST OF ALL THAT HAVE BEEN DESCRIBED
AS NATIVES OF THE BRITISH ISLES.

BY THE REV. M. J. BERKELEY, M.A., F.L.S.

The object of this volume is to give a Popular Account of Fungi in general, and to present such information as will enable students, without the aid of anything more than a pocket-lens, to determine the larger species. For this purpose it contains full Specific Characters of the greater part of those Fungi which do not require a microscope for their investigation, amounting to more than a Thousand Species, together with original Coloured Figures by FITCH of above a Hundred and Fifty Species, with Dissections, followed by a Glossary, explanatory of unusual terms; and to meet the wishes of scientific friends, a complete list of the more minute species is appended.

"The kind of philosophy we wish to get out of funguses is more general, and more generally interesting; and for this Mr. Berkeley is as informing a companion as any plain man who would use plain English in place of barbaric Latin and Greek. . . . Fungologists will find a to be a valuable text-book."—ATHENÆUM.

"The 'Outlines of British Fungology,' by the Rev. Mr. Berkeley, now supplies the student with all necessary means of understanding the subject. It has an excellent Introduction of 88 pages; a Systematic Description of all the species of frequent occurrence, written in English, with as little use of technical language as the subject will admit of; and moreover Twenty-four Plates from the skilful hand of Fitch, crowded with Coloured Figures."—Dr. LINDLEY, *in the GARDENERS' CHRONICLE*.

In 2 vols., royal 4to, price £12. 2s. 6d., with 130 Coloured Plates,

ILLUSTRATIONS OF BRITISH MYCOLOGY;

CONTAINING FIGURES AND DESCRIPTIONS OF THE FUNGUSES OF
INTEREST AND NOVELTY INDIGENOUS TO BRITAIN.

By Mrs. T. J. HUSSEY.

"This is an elegant and interesting book. A great deal of new and valuable matter accompanies the plates, which are not fancy sketches, but so individualized and lifelike, that to mistake any species seems impossible. Mycology has great charms. If any doubt, let them study Mrs. Hussey's book."—MORNING POST.

"The figures are so faithful, that there can be no difficulty in at once determining with certainty the objects they are intended to represent; and the observations, especially those of the culinary department, will be found of much interest to the general reader, and we doubt not that our tables will in consequence receive many a welcome addition; while, from the accuracy of the figures, there will be no danger, with ordinary attention, of making any serious blunder."—GARDENERS' CHRONICLE.

LOVELL REEVE & CO., 5, HENRIETTA ST., COVENT GARDEN.

Early in March will be published, Price Five Shillings,

A PRACTICAL TREATISE ON THE CULTURE OF THE PINE-APPLE.

By DAVID THOMSON, Archerfield Gardens, N.B.

BARR AND SUGDEN'S
 DESCRIPTIVE PRICED LIST
 OF
CHOICE SEEDS
 FOR
FLOWER AND KITCHEN GARDENS,
 BEING THE COMPENDIUM OF THEIR
 ILLUSTRATED GUIDES TO THE FLOWER AND KITCHEN GARDENS.

BARR & SUGDEN,
 12, KING STREET, COVENT GARDEN, LONDON, W.C.

INTERNATIONAL BOTANICAL AND HORTICULTURAL CONGRESS.

Those who intend to Exhibit Plants at the above grand gathering should use **STANDEN'S GARDENER'S** and **AMATEUR'S FRIEND MANURE**; it promotes a healthy vigorous growth in Plants, increases the size, and enriches the colour of the Flowers, and greatly improves the foliage. Price given above. This manure should be laid on the surface dry and watered in, thus saving much labour. Sample Canisters 1s. and 2s. 6d., Bags, 5s. 6d., 10s. 6d., and 21s.

The above valuable Manure can be procured from any respectable Nurseryman or Seedsman.

THE FOLLOWING ARE A FEW OF THE AGENTS:—

For London:—
 Messrs. E. G. Henderson & Son,
 St. John's Wood.
 Messrs. Hugh Low & Co., Upper
 Clapton.
 Messrs. James Carter & Co.,
 High Holborn.
 Messrs. Downie, Laird, & Laing,
 Forest Hill and Edinburgh.
 Mr. Green, Covent Garden.

For London:—
 Messrs. Hooper & Co., Covent
 Garden.
 Mr. B. S. Williams, Paradise
 Nursery, Holloway.
 Mr. Kennedy, Covent Garden.
 Mr. Gaines, Covent Garden.
 Mr. Buck, Covent Garden.
 Mr. William Cutbush, Barnet.
 Mr. Macintosh, Hammersmith.

For the Provinces:—
 Mr. Charles Turner, Slough.
 Mr. W. Dean, Bradford.
 Mr. C. Felton, Birmingham.
 Mr. S. May, Leeds.
 Mr. F. G. Godwin, Sheffield.
 Mr. W. Dillistone, Hedingham,
 Essex.
 Mr. T. Hobbs, Landport.

* * Additional names of Agents will be given from time to time.

BARR & SUGDEN, SEED, PLANT, AND BULB MERCHANTS, 12, KING STREET, COVENT GARDEN

HABRANTHUS FULGENS.

Brilliant-flowered Habranthus.

Nat. Ord. AMARYLLIDÆ.—HEXANDRIA MONOGYNIA.

Gen. Char. Perianthium campanulatum, tubo brevi ad faucem incrassato, squamuloso, limbi laciniis subæqualibus. Stamina fauci inserta, libera, fasciculata, valde inæqualia. Stylus declinatus, sursum curvatus, stigmatē 3-fido. Capsula 3-sulca. Semina loculis 2-seriata, horizontalia, compressa; testa crustacea, alia.—Herbæ Americæ tropicæ et extratropicæ australis indigenæ; radice bulbosa. Folia angusta, 2-faria, linearia, flaccida. Scapus cavus, multiflorus. Spatha apice 2-fida.—Herbert.

HABRANTHUS *fulgens*; elata, robusta, foliis glaucescentibus 10–12-pollicaribus linearibus obtusis recurvis dorso convexis, scapo tereti glauco basi purpurascente, spatha lacera, floribus 6–8 pedicellatis amplis 4–5 poll. diametro, perianthii tubo brevi extus flavo, lobis lineari-oblongis patentibus miniatis basi aureis, squamis 2-cruribus, filamentis flavis, stigmatē minute 3-lobo.

A truly magnificent plant, sent by Messrs. Backhouse, of York, with whom it flowered in April of last year.

As a species, it approaches nearest to *H. phycelloides*, Bot. Reg. t. 1417, but the whole plant is more than twice as large, and as far as can be judged from the indifferent figure given of that plant, this further differs in the brighter colour, yellow filaments, larger broader perianth-lobes which spread widely, and in the character of the corona at the base of the lobes, which in *H. phycelloides* forms an annular bearded membrane, but in this consists of bifid fleshy scales.

DESCR. *Bulb* not seen. *Leaves* glaucescent, ten to twelve inches long, half to three-quarters of an inch broad, linear, recurved, obtuse, convex, and scarcely keeled at the beak. *Scape* one to one and a half foot high, as thick as the little finger, glaucous green above, purple below. *Flowers* seven in this specimen, four to five inches across, bright scarlet;

MARCH 1ST, 1866.

tube yellow externally; *lobes* linear-oblong, acute, golden-yellow at the base, the yellow forming a defined triangular mark; *scales* at the base of the tube of corolla six, forked. *Stamens* with yellow filaments. *Stigma* minutely three-lobed.—*J. D. H.*

Fig. 1. Flower, with the perianth-segments removed. 2. Base of perianth-tube and scales. 3. Transverse section of ovary:—*all magnified.*

W. Fisher del et lith

Vincent Brooks, sculp

DENDROBIUM DIXANTHUM.

Double-tinted yellow Dendrobium.

Nat. Ord. ORCHIDÆ.—GYNANDRIA MONANDRIA.

DENDROBIUM *dixanthum*; caule erecto teretiusculo basi valde tenui stipitato sesquipedali, racemis brevibus lateralibus 2–5-floris ex caulibus vetustis, mento parvo obtusangulo, sepalis lanceolatis acutis, petalis oblongis acutis sublongioribus margine minute denticulatis, labello ab ungue lato hastato subquadrato obtusangulo antrorsum dilatato, medio antice minute emarginato, toto margine minute serrulato denticulato, carinulâ transversâ per unguis basin, nervis fere omnibus lincis cristularum obtectis.

DENDROBIUM *dixanthum*. *Rehb. fil. in Gard. Chron.* (1865) 'New Plants,' n. 301.

Moulmein, that inexhaustible mine of new *Dendrobia*, is the native country of this pretty plant which was discovered in 1864 by the Rev. C. P. S. Parish and sent to Messrs. H. Low and Co. of Clapton. It grows rapidly and flowers freely (in the early summer) under ordinary treatment. Unfortunately the leaves fall off the stems—old and young alike—before the flowers have had time to expand, a circumstance that detracts materially from their effect.

In Professor Reichenbach's otherwise accurate description of the plant in the 'Gardeners' Chronicle' he speaks of the flowers as appearing singly on the side of the old stems, a mistake which the examination of additional examples—produced at Knypersley and elsewhere—has enabled me to correct. The name is in allusion to the two tints of yellow which are found in its blossoms.

In the form of its leaves—which are grassy and very sharp-pointed—this species resembles *D. aduncum*, from which however it is otherwise entirely distinct.

DESCR. *Stems* upright or nearly so, smooth, somewhat club-shaped, about half a yard high. *Leaves* grassy, three or four inches long, very sharp-pointed, falling off before any flowers

MARCH 1ST, 1866.

appear. *Racemes* short, two- to five-flowered. *Sepals* (which like the petals are a pale yellow) lanceolate, sharp-pointed, forming at their base a short mentum or chin. *Petals* oblong, acute, less than an inch long, a little wider than the sepals, faintly toothed at the margin; *lip* spreading out in front from a broad hastate nearly square blunt-angled claw, a little serrated along the whole extent of its margin, traversed by a bar across its base, of the same colour as the petals, excepting a deep orange tint on its disk.—*J. B.*

Fig. 1. Column and claw of labellum. 2. Lip:—*magnified.*

GLADIOLUS PAPILIO.

Butterfly-flowered Gladiolus.

Nat. Ord. IRIDÆ.—HEXANDRIA MONOGYNIA.

Gen. Char. (Vide supra, TAB. 5427.)

GLADIOLUS *Papilio*; elatus, glaberrimus, foliis 2-3-pedalibus lineari-ensiformibus striatis, spica pedali laxiflora, floribus distantibus, spathis cymbiformibus tubum perianthii superantibus, perianthio campanulato ringente, lobis subæqualibus omnibus late obovatis 3 exterioribus et interiorum supremo pallide purpureis basi flavis, interiorum 2-lateralibus medio sanguineo-purpureis et plaga semilunari aurea pictis, stigmate breviter trifido.

The Cape Colony abounds in species of *Gladiolus*, amongst which that now figured appears the most beautiful, though not the most gorgeous, that has hitherto been made known; nothing can well exceed the delicacy of the pale purple of the upper petals, or the vividness of the deep purple and golden-yellow markings of the lower ones. It was received at Kew, in 1861, from D. Arnot, Esq., of Colesberg, to whom the Royal Gardens are indebted for many excellent plants; it was also found by Mr. W. Wilson Saunders's collector, Cooper, from whom roots, kindly communicated by Mr. Saunders, flowered here two years later.

DESCR. *Plant* three feet high and upwards, quite glabrous, rather stout. *Leaves* narrow ensiform, gradually attenuated to the long acuminate apex, two to three feet long, one inch broad or upwards, striated, bright green. *Spike* a foot long and more, slender, slightly inclined, many-flowered. *Flowers* one to two inches apart. *Bracts* one to one and a half inch long, cymbiform, acute, longer than the perianth-tube, green, purplish on the back. *Flowers* horizontal, one and a half inch expanse, subcampanulate, with incurved lobes. *Perianth-*

tube purple, exserted beyond the bract; *lobes* nearly equal in size, all broadly obovate, obtuse; two upper outer segments very pale purple with a faint dash of yellow down the middle; lower outer lobe with a strong purple central mark from the base to the middle, and beyond that a yellow spot; upper inner lobe coloured like the outer lateral; two lower inner lobes with a broad very deep purple central band extending from the base to the middle, beyond which is a broad semilunar golden areole, encircling the end of the purple. *Anthers* linear. *Stigma* shortly three-cleft.—*J. D. H.*

Fig. 1. Ovary, tube of perianth, stamens, style, and stigma:—*magnified.*

Vincent Brooks, Imp.

PERISTROPHE LANCEOLARIA.

Lance-leaved Peristrophe.

Nat. Ord. ACANTHACEÆ.—DIANDRIA MONOGYNIA.

Gen. Char. Calyx æqualis, 5-fidus v. 5-partitus, 2-bracteolatus. Corolla resupinata, 2-labiata, labiis planiusculis v. inferiore concavo, superiore apice 3-fido, inferiore integro v. 2-dentato. Stamina 2. Antheræ angustæ, 2-loculares, loculis recte v. oblique uno pone v. supra altero positis, muticis. Capsula 2-valvis, 2-locularis, basi elongata, compressa, sterilis, commissura valvarum plana, sursum compressa, loculis 2-spermis; dissepimentum adnatum, persistens. Semina discoidea, retinaculis uncinatis.—Herbæ Indicæ, floribus speciosis. Flores speciosi, sæpissime in capitula 2-bracteata inclusi, capitulis paniculatis.

PERISTROPHE lanceolaria; herbacea, erecta, 2–4-pedalis, caule teretiusculo, ramulis et inflorescentia minute glanduloso-pubescentibus, foliis petiolatis lanceolatis oblongo-lanceolatisve glaberrimis membranaceis, 3–5-poll. longis, paniculis terminalibus dichotome ramosis erectis, capitulis sub-3-floris angustis, bracteolis elongato-subulatis $\frac{3}{4}$ poll. longis, calycis lobis subulatis excedentibus, corolla pallide purpurea, tubo gracili exserto 1–2 poll. longo, limbi labio superiore oblongo pollicari, inferiore multo brevioris cymbiformi acuto, antheris rectis loculis superpositis.

PERISTROPHE lanceolaria. Nees in Wall. Pl. As. Rar. pp. 111–114, et in De Cand. Prod. v. 11. p. 496.

JUSTICIA lanceolaria. Roxb. Fl. Ind. v. 1. p. 121.

Though many species of *Acanthaceæ* are in cultivation, there is perhaps no order of plants which promises so many future valuable additions to our stoves. A large proportion of the species are very beautiful plants, they are most easily propagated, they come into flower in the dead of winter, when our houses are often denuded of other ornaments but of the commonest sorts, and continue in flower for many weeks in succession. Such is the case with the present beautiful plant, of which the Rev. Mr. Parish sent us seeds from Moulmein, a year ago, and whose offspring have continued in flower for six weeks in the palm-house shelves. The species, which

was first described by Roxburgh in the Calcutta Gardens, is confined to the far-eastern districts of India; it was found in the Sylhet jungles by Dr. Thomson and myself in 1850, but our plants are from Mr. Parish's seeds.

DESCR. A herbaceous plant, shrubby at the base and much branched, branches and inflorescence viscid-pubescent. *Leaves* three to five inches long, lanceolate or oblong-lanceolate, long-acuminate, attenuated into the petiole, glabrous on both surfaces. *Panicles* terminal, much branched, branches erect, patent, with long, rigid, subulate bracts at the axils, terminated by three-flowered, narrow heads. *Calyx-lobes* subulate, shorter than the similar bracteoles. *Corolla* pale purple, with a long, slender tube, that is compressed, and slightly twisted at the apex; *upper lip* one inch long, oblong, three-toothed, pale purple-white, and speckled at the throat, lower very concave, much shorter, entire at the apex. *Anthers* straight.—*J. D. H.*

Fig. 1. Bracteoles, calyx, and pistils. 2. Stamens. 3. Ovary :—all magnified.

Vincent Brooks, col.

BATEMANNIA GRANDIFLORA.

Large-flowered Batemannia.

Nat. Ord. ORCHIDÆ.—GYNANDRIA MONANDRIA.

Gen. Char. Flores ringentes. *Sepala* patentia, lateralia unguiculata, basi æqualia. *Petala* sepalis latiora, basi obliqua, pedi producto columnæ adnata. *Labellum* cum columnâ articulatam, trilobum, cucullatum. *Columna* semiteres, basi elongata, clinandrio marginato. *Anthera* parva, bilocularis, membranacea. *Pollinia* 2, postice biloba, glandulâ triangulari, caudiculâ nullâ. *Lindl. Bot. Reg. v. 20. (1835) p. 1714.*

BATEMANNIA *grandiflora*; pseudobulbis ovatis lucidis diphyllis, foliis valde coriaceis lanceolatis acutissimis racemis basilaribus 2-5-floris 3-plo longioribus, sepalis exterioribus liberis lanceolatis acutissimis patentibus æqualibus, internis paulo minoribus subcarnosis basi latis, labello brevissimè unguiculato, basi gynostemii productæ articulo subconcavo trilobo, lobo medio majori fimbriato, apice longe acuminato. Columna arcuata, margine membranaceo, alis truncatis denticulatis. Anthera operculiformis 2-ocularis. Stigma concavum, rostello acuto, glandulâ ovali antice attenuatâ. Pollinia 4 per paria superposita compressa. *Rehb. fil. Bonpl. 1856. v. 4. p. 323, et in Walpers' Annales.*

GALEOTIA *grandiflora*; *Rich. et Gal. l. c. et tab. 27.*

The genus *Batemannia* was so named by Prof. Lindley, upwards of thirty years ago, after the writer of these remarks. The original species, *B. Colleyi*, came from Demerara, and a second, *B. Beaumonti*, from Bahia, and with these Prof. Reichenbach has now associated two species of the supposed genus *Galeottia* (*G. fimbriata* and *G. grandiflora*), which agree well with *Batemannia*, except that the number of pollen-masses is four instead of two. A fifth species has been added under the name of *B. meleagris* (the *Huntleya meleagris* of Lindley), which, though I quite think my friend is right in removing it from *Huntleya*, I am convinced he is wrong in placing under *Batemannia*, with which its habit—more like that of an Eastern *Vanda*—does not at all accord.

The present species is a very handsome plant, introduced

MARCH 1ST, 1866.

many years since by Linden from New Granada, but still extremely rare. The figure was taken from specimens produced in the spring of 1865, in Mr. Rucker's far-famed collection. Being found at a lower elevation (4000 ft.) than the majority of its tribe in New Granada, it requires rather more warmth than most of what are now denominated "cool" Orchids.

DESCR. *Pseudobulbs* ovate, deeply furrowed, shining, two or three inches long, bearing two large, broadly-lanceolate, very sharp-pointed, leathery leaves. *Flower-scapes* much shorter than the leaves, three- to five-flowered. *Sepals* free, lanceolate, very sharp-pointed, fully expanded, all of the same size, olive striped with reddish-brown. *Petals* rather smaller, slightly fleshy, broad at the base. *Lip* with a short claw, jointed with the extended base of column, rather hollow, three-lobed, its middle lobe largest, fringed, and very acuminate, white with purple streaks, and orange-coloured calli at the base. *Column* arched, with membranous edges, and truncate, toothleted wings. *Anther* two-celled. *Stigma* hollow, with sharp beak and oval gland narrowing to a point in front. *Pollen-masses* four.—*J. B.*

Fig. 1. Pollen-masses:—*magnified.*

J. B. BROWN & CO.'S NEW PATENT B B LAWN MOWER.

Manufactured
by
J. B. Brown & Co.,
148,
Upper Thames
Street,
London.

Guaranteed to
give perfect
satisfaction, and
if not approved of
may be at once
returned.

J. B. BROWN and Co., having so very successfully introduced, at the recent Meeting of the Bath and West of England Society at Hereford, in June 1865, the NEW PATENT B B LAWN MOWER, of their own manufacture, beg to mention that having supplied the large number of MACHINES ordered on that occasion, and up to the present time, with most unqualified satisfaction to every one, so far as they are aware, they are now actively preparing to execute further orders for the approaching season; and, owing to the large number of such orders already received, they would very respectfully solicit all intending orders to be sent with as little delay as possible,—say to be executed at any time during the opening of the spring, or in the course of the summer, as may be desired.

PRICES—including Carriage to any Railway Station or Shipping Port in England.

J. B. BROWN & CO.: OFFICES, 18, CANNON STEET, CITY, LONDON, E.C.

(Nearly opposite St. Swithin's Lane and "London Stone," and near London Bridge.)

WAREHOUSE (where Stock is kept), 148, UPPER THAMES STREET E.C.

(Opposite the City of London Brewery, and close to the London Bridge Steamboat Piers.)

HEATING BY HOT WATER

It is now generally admitted that Buildings of any kind can be more effect warmed by Hot Water than by any other means; but as so much depends on way in which the Apparatus is fixed, it is of the greatest importance that it be by experienced men.

J. JONES & SONS are prepared to estimate for Warming, to any extent—

GREENHOUSES.	CHURCHES.	FACTORIES.
CONSERVATORIES.	CHAPELS.	OFFICES.
VINERIES.	SCHOOLS.	WORKSHOPS.
HOTHOUSES.	READING ROOMS.	WAREHOUSES.
FORCING PITS.	LECTURE ROOMS.	DRYING ROOMS.
PEACH HOUSES.	BILLIARD ROOMS.	CELLARS.
PINE STOVES.	HALLS AND PASSAGES.	COACH-HOUSES.
ORCHARD HOUSES.	BATHS.	HARNESS ROOMS.

J. JONES & SONS' Apparatus is simple in construction, moderate in cost, economical in working.

It is equally available for the Amateur's Greenhouse, or the longest rang Forcing Houses; for the smallest Chapel or the largest Church; for Private Off or those of Public Companies.

It is admirably adapted for Dwelling Houses, as coils of pipes can be pl in any part, for warming the various rooms. One or more Baths may be he from the same boiler, and a constant supply of hot water obtained in any par the house.

For Warehouses and Workshops this system of heating is unsurpassed, as i not only the means of keeping goods dry, but it also adds to the comfort of workpeople, and thereby effects a saving in labour.

J. JONES & SONS recommend boilers of all kinds being set in brickwork possible; but portable boilers can be supplied, if required.

MATERIALS.—All Materials supplied will be of the best quality.

DELIVERY.—Boilers of various kinds, and pipes and connections, being alw in stock, can, at a very short notice, be sent to any part.

FIXING.—The Fixing will be done by experienced men, fully capable of finish properly any work they may undertake; and J. JONES & SONS are prepared guarantee the effectual working of any apparatus fixed by their own men.

ESTIMATES.—Plans and Estimates will be sent on application.

CURTIS'S
BOTANICAL MAGAZINE,

COMPRISING

THE PLANTS OF THE ROYAL GARDENS OF KEW,
AND OF OTHER BOTANICAL ESTABLISHMENTS IN GREAT BRITAIN,
WITH SUITABLE DESCRIPTIONS;

BY

JOSEPH DALTON HOOKER, M.D., F.R.S. L.S. & G.S.,
Director of the Royal Botanic Gardens of Kew.

~~~~~  
Nature and Art to adorn the page combine,  
And flowers exotic grace our northern clime.  
~~~~~

LONDON:
LOVELL REEVE & CO., 5, HENRIETTA STREET, COVENT GARDEN.

1866.

THE HYDROPULT,

AN INVENTION FOR THROWING WATER BY HAND-POWER.

(SECURED BY ROYAL LETTERS PATENT.)

Weights but 8 lbs.

Will throw 7 or 8 Gallons of Water per minute 50 feet, when worked by power of one Man.

PRICE LIST.

Complete with Brass Cylinders and Japanned Stirrup, £1. 12s. 6d

Complete with Brass Cylinders and Copper Stirrup, £2. 2s.

The price, "complete" as above, includes 2½ feet Suction, and 3 feet Delivery Hose, Galvanized Wire Strainer, Rose, and Small Jet.

THE HYDROPULT

Is invaluable for use in the Garden for

WATERING BEDS,
SPRINKLING PLANTS,
DROWNING OUT INSECTS,
CLEANSING TREES FROM SMUTS,
DRESSING WITH LIQUID MANURE, ETC. ETC.

THE HYDROPULT

Is desirable in every Household for

WASHING WINDOWS.
WETTING SIDE WALKS,
SPRINKLING STREETS,
WASHING CARRIAGES,
EMPTYING CISTERNS,
FILLING BARRELS,
A SPRAY BATH, ETC. ETC.

ORDERED BY THE WAR DEPARTMENT AS FIRE ENGINES.

ROBERT HOGG, LL.D. & F.L.S., REV. H. DOMBRAIN, A.B., SHIRLEY HIBBERT, ESQ., F.R.H.S., THOMAS RIVERS, ESQ. (the eminent Florist), and other well-known gentlemen, recommend the Hydropult as an Invaluable Garden Implement.

The Hydropult will draw water horizontally, if necessary, through Two Hundred Feet Suction Hose, and force it through Delivery Hose to an altitude of One Hundred Feet.

THE GREENHOUSE AND CONSERVATORY HYDROPULT

A NEW AND BEAUTIFUL IMPLEMENT,

Weighing scarcely 5 lbs.

And specially adapted for use in the Greenhouse and Conservatory.

Price 35s.

Complete, with Brass Cylinders and Copper Stirrup, 2½ feet Suction and 3 feet Delivery Hose, Strainer, and Fan.

This New Implement must necessarily supersede Syringes and other devices of the kind, for it will be found more effective in its operation.

A LADY CAN WORK IT FOR HOURS WITHOUT FATIGUE.

CAUTION.—Important to the Public.—The extensive sale of the Hydropult has excited the cupidity of some respectable, but in reality unprincipled Manufacturers, who are now palming on the Public worthless imitations of the Hydropult, and through their connections are enabled to place said devices on exhibition, and for sale in many respects the Hydropult in appearance, and are calculated to deceive the unsuspecting. The Proprietor, therefore, issues this Caution, and respectfully intimates that parties wishing to purchase the Hydropult should examine the machine offered for sale, and see if it has attached thereto a label, with the following words:—"The Hydropult, Vose's Patent, manufactured only by GRIFFITHS & BROWITT, Birmingham. CHARLES POMEROY, Proprietor, & and 143, Cheapside, London." Unless this label is attached, the machine is not the Hydropult.

PROSPECTUSES, WITH TESTIMONIALS, ON APPLICATION.

HYDROPULT SHOW-ROOM, 142 & 143, CHEAPSIDE, LONDON.

CHARLES POMEROY BUTTON, PROPRIETOR.

BOTANICAL MAGAZINE ADVERTISER.

SHANKS' PATENT LAWN MOWERS FOR 1866.

Patronized on Five separate occasions, during the Season of 1864, by

HER MAJESTY THE QUEEN,

AND ONCE BY HIS MAJESTY THE KING OF SAXONY;

AGAIN ON FOUR SEPARATE OCCASIONS DURING THE SEASON OF 1865 BY HER MAJESTY THE QUEEN;

ONCE BY HIS MAJESTY THE KING OF HOLLAND;

AND ONCE BY HIS MAJESTY THE KING OF PRUSSIA.

HORSE MACHINE.

PONY MACHINE.

HAND MACHINE.

ALEXANDER SHANKS & SON, in presenting their LAWN MOWERS for the approaching Season, are gratified to be able to state that the demand for their celebrated Machines is rapidly increasing.

A. S. & SON, in introducing Improvements into their Machines, have been careful that no Improvement be introduced which has merely novelty to recommend it, but that the advantages in point of durability and simplicity of construction, which have always been a peculiarity of their Machines, should still remain.

A. S. & SON can confidently assure their numerous Friends and Customers and the Public generally that their endeavour will always be to supply a Machine, first-class in every way, one which cannot be surpassed if even equalled, whether for simplicity of construction, ease in working, or durability. None but the best materials and skilled workmen are employed in the manufacture of their Machines.

PRICES—Including Carriage to most of the principal Railway Stations and Shipping Ports in the Kingdom.

SHANKS' NEW PATENT HAND MACHINE FOR 1866.

10-inch Machine.....	£3 10 0	} Easily worked by a Lady. Do. by a Boy. Do. by a Man.	19-inch Machine.....	£7 12 6	{ Do. by a Man and a Boy. Do. by Two Men.

Silent Movement, 20s. extra; Boots for Horse's Feet, 24s. per Set.

SHANKS' PATENT LAWN MOWERS cut the Grass on uneven as well as on level Lawns; and it is quite immaterial whether the Grass be *wet or dry*.

Every Machine warranted to give ample satisfaction, and if not approved of, can be at once returned.

ALEXANDER SHANKS & SON,

27, LEADENHALL STREET, LONDON.

MANUFACTORY, DENS IRONWORKS, ARBROATH.

A. S. and SON keep a Stock of Lawn Mowers at 27, Leadenhall Street, London, from which Orders can be at once executed. They also have at their London Warehouse a staff of experienced Workmen thoroughly acquainted with all the details of these Machines, so that they are enabled to repair Lawn Mowers in London as well as at the Manufactory.

GREEN'S PATENT SILENS MESSOR

OR

NOISELESS LAWN MOWING, ROLLING AND COLLECTING MACHINES.
 FITTED WITH PATENT SELF-SHARPENING CYLINDER CUTTERS.

By Special Appointment
 Sole Manufacturer.

To Her Most Gracious
 Majesty the Queen.

Every Machine is warranted to give entire satisfaction, and if not approved of can be returned unconditionally.

Green's Patent Lawn Mowers have proved to be the best, and have carried off every prize that has been given in all cases of competition.

PRICES OF HAND MACHINES.

To cut 10 inches ... £3 10 0 ... Suitable for a Lady	To cut 18 inches ... £7 10 0 Suitable for one person

" 14 " ... 5 10 0 ... Suitable for one person	" 22 " ... 8 10 0 " "
" 16 " ... 6 10 0 ... " "	" 24 " ... 9 0 0 " "

Prices of Horse, Pony, and Donkey Machines, including patent self-delivery box; cross stay complete; suitable for attaching to ordinary chaise-traces or gig harness.

To cut 26 inches ... £13 0 0 ... } Leather Boots for	To cut 30 inches ... £21 0 0 } Leather Boots for
" 28 " ... 15 0 0 ... } Donkey, 18s.	" 36 " ... 24 0 0 } Pony, 22s.
" 30 " ... 17 0 0 ... }	" 42 " ... 27 0 0 } Leather Boots for
	" 48 " ... 30 0 0 } Horse, 26s.

The 26, 28, and 30 inches can easily be worked by a donkey, or by two men, on an even lawn, the 30 and 42 inches by a pony, and 42 and 48 inches by a carriage horse; and, as the Machines make no noise in working, most spirited animal can be employed without fear of its running away, or in any way damaging the Machine.

Both the Horse, Pony, Donkey, and Hand Machines possess (over all other Makers) the advantages of sharpening: the cutters being steel on each side, when they become dull or blunt by running one way round cylinder, can be reversed again and again, bringing the opposite edge of the cutter against the bottom blade, when Machine will cut equal to new. Arrangements are made that the cylinder can be reversed, by any unexperienced person, in two or three minutes.

The above Machines are made from the best materials, and of superior workmanship; are delivered Carriage Free to all the principal Railway Stations and Shipping Ports in England.

Thomas Green & Son, Smithfield Iron Works, Leeds; 44 & 45, Blackfriars Road
 London, S.; and 19, Eden Quay, Dublin.

NEW ZONALE PELARGONIUM, WILTSHIRE LASS.

DOWNIE, LAIRD, & LAING

Have much pleasure in introducing this splendid Novelty, which was pronounced by the Members of the Floral Committee of the Royal Horticultural Society, and also by the Judges of the Royal Botanic Gardens, Regent's Park, as the finest PINK PELARGONIUM ever exhibited, and was awarded a First-class Certificate on each occasion.

The following description is from the Journal of the Royal Horticultural Society of London:—"One of the finest of the pink-flowered Bedding varieties yet seen, remarkable, not so much for size of flower as for size and completeness of truss; the leaves were marked with a pale zone; the flowers were rosy-pink; the base of the upper petals white, and the trusses are remarkably large and dense, having the valuable property of retaining their blossoms for a long time in the truss."

The following NURSEYMEN have already ordered it, and will be able to supply it on and after the 17th of May next, at 5s. each:—

Messrs. Backhouse & Son, York	Messrs. Ivery & Son, Dorking	Mr. J. Fraser, Leyton, Essex, N.E.
" Barr & Sugden, Covent Garden, W.C.	" J. & C. Lee, Hammersmith, W.	" W. Ivery, Rye Lane, Peckham, S.
" Carter & Co., High Holborn	" Hugh Low & Co., Clapton, N.E.	" J. Keynes, Salisbury
" Cutbush & Son, Highgate, N.	" Osborn & Sons, Fulham, S.W.	" J. M'Ronald, Chichester
" F. & A. Dickson & Son, Chester.	" F. & A. Smith, Dulwich, S.	" W. Masters, Canterbury

		" B. S. Williams, Holloway, N.

As our stock is limited, early Orders are respectfully solicited, which will be executed in strict rotation as received.

PRIMULA, CALCEOLARIA, ETC.

WM. CUTBUSH AND SON are now sending out Seed of their superb PRIMULA SINENSIS FIMBRIATA, which has for many years given great satisfaction.

The 'Gardeners' Chronicle' of the 6th of January, in Notices to Correspondents, says:—"The blooms sent are remarkably fine, richly coloured, full, and densely fringed; they are evidently the produce of a capital strain."

The 'Journal of Horticulture' of the 23rd of January, says that "The finest and richest coloured Chinese Primulas we have yet seen are those raised by Messrs. Cutbush and Son."

Sealed packets, 2s. 6d. and 3s. 6d. each.

CALCEOLARIA (JAMES'S).—This is the finest herbaceous variety extant. Per packet, 2s. 6d. and 3s. 6d. each.

CINERARIA, from finest named varieties. Per packet 2s. 6d. and 3s. 6d. each.

HIGHGATE NURSERIES, LONDON, N.

GEORGE SMITH'S New Catalogue is now ready, with a splendid woodcut of Nosegay Geranium LE GRAND, which is the finest of all Geraniums for effect; together with descriptions of New Seedling Zonale Geraniums, CHIEFTIAN, CHRISTABEL, EXHIBITOR, GLADIATEUR, GREAT EASTERN, SIR R. PEEL, and PINK PERFECTION, which for their general fine qualities have received First-class Certificates at the Royal Botanic Gardens, and Royal Horticultural Gardens, South Kensington, and all of which G. S. can with the greatest of confidence recommend for description: see Catalogue, which also contains select sets of Show FRENCH FANCY ZONALE AND VARIEGATED GERANIUMS, FUCHSIAS, VERBENAS, PETUNIAS, DAHLIAS, CHRYSANTHEMUMS, BEDDING PLANTS, etc., and will be sent in exchange for one postage stamp.

NEW PLANTS FOR 1866.

B. S. WILLIAMS,

VICTORIA AND PARADISE NURSERIES, HOLLOWAY, LONDON, N.

Has great pleasure in offering, for the first time, the undermentioned Splendid Plants. Every care has been used in the selection of the several kinds, therefore he trusts they will give the highest satisfaction.

AZALEAS.

The two following beautiful varieties will be found great acquisitions, and B. S. W. feels confident that they must take first rank as exhibition plants, PRINCESS ALEXANDRA being raised from the same parents as *Elegantissima*, which has proved to be one of the best. The present variety will be found superior in quality, with much larger flowers, of a substance never before met with—the most important feature for prolonging the flowering season. PRINCESS HELENA is recommended for its general usefulness, being a free bloomer and quite distinct in habit.

PRINCESS ALEXANDRA.—A beautiful form of *Elegantissima*, with flowers $3\frac{1}{2}$ inches across; petals round and smooth, of great substance, slightly striped with deep crimson; a profuse bloomer. 3s. 6d.

PRINCESS HELENA.—Deep rosy pink, upper petals spotted with lake. The transparency of the flowers causes it to be distinct from all other kinds; habit good and free. 2s.

RHODODENDRONS.

These two elegant varieties are the Seedling productions of Mr. Bousie, late of Stoke Park, and were exhibited by him a few seasons since at the Royal Horticultural Meetings, and received Certificates of Merit as valuable additions for greenhouse decoration, being of free-flowering habit, a feature much wanted in a greenhouse Rhododendron.

DENISONII.—A Seedling from *Dalhousianum*, crossed with *Edgeworthii* and *Gibsonii*; a very fine variety, with splendid habit, well furnished with clean-looking flattish elliptic leaves and large campanulated flowers, pure white, with a lemon stain towards the base, very elegant (to be figured in the 'Floral Magazine' for May). 2s.

MENABBI.—From *ciliatum*, crossed with *Edgeworthii*; a very handsome plant, dwarfish in habit, with smooth elliptic leaves, and beautiful large blush-white flowers. 2s.

ACHIMENES.

Six beautiful varieties raised by Mr. Parsons, of Welwyn, and far in advance of any yet sent out. PINK PERFECTION the same size as Mauve Queen, and equal in substance, while GRANDIS gives the deepest violet shade; all the others will be found equally distinct in their separate colours. Received Certificates of Merit from the Floral Committee.

ADVANCE.—Flowers deep reddish purple, with a light spotted eye, shaded towards the margin, quite distinct. 7s. 6d.

ARGUS.—Colour rich plum, large deep orange eye, spotted with carmine, upper lobes of the flowers beautifully rayed towards the margin. 7s. 6d.

AURORA.—Flowers 2 inches across; colour rich heavy scarlet, with light yellow eye, very effective. 7s. 6d.

GRANDIS.—Flowers deep violet colour, with a deep orange eye, finely spotted and shaded with carmine. 7s. 6d.

PINK PERFECTION.—Flowers very large, colour magenta rose; the upper part of the eye rich carmine, the under lobes beautifully rayed with violet, very fine. 7s. 6d.

STELLA.—Flowers $2\frac{1}{2}$ inches across, clear magenta, orange eye, spotted with carmine, nicely serrated, distinct and beautiful. 7s. 6d.

The above set for 40s.

SWAINSONIA MAGNIFICA.

Figured in the 'Floral Magazine.'

A free-growing and free-flowering greenhouse climber; native of Australia; habit and character partakes of both the *Clianthus* and *Swainsonia*; while it has the robust and graceful-growing habit of the former, it produces more prominently the long pendent racemes of delicate bright coloured pink flowers of the latter, with a pure white centre in the upper petal or lobe. It is well adapted for a cool greenhouse, treated as a pot plant or planted out in a border for pillars or trellis-work. 10s. 6d.

THUNBERGIA FRAGRANS.

B. S. W. believes this to be the most useful plant he has ever had the pleasure of offering, the whole character being quite distinct to any other *Thunbergia*, and whether grown as a pot plant or planted in the border for covering pillars and trellis-work, it will be invaluable, being free in growth, with ample foliage of a dark green, with great substance. It continues flowering throughout the year, but its principal period is during the winter months, a time when white flowers are scarce. Although grown in a warm stove, it has never shown the least sign of red spider, a most important feature in this class of plants. 10s. 6d.

PELARGONIUMS, BEDDING.

The following six Zonale Geraniums were raised by Shirley Hibberd, Esq., the eminent Horticulturist. It is well known that this gentleman has for some years given his close attention to this class of Bedding Plants, planting in his own experimental garden every kind that has been raised, and carefully testing or proving their worth as regards habit and novelty by comparison, etc. He has already raised several valuable kinds, but prior to this season none have been sent out under his name. B. S. W. has prevailed upon Mr. Hibberd to allow him to use his name. This will convince all that they are each varieties of more than ordinary merit, and real novelties.

ANDREW MARVEL.—Leaves bright green, with broad brownish zone flowers, large, and of remarkable substance and smoothness; colour vermilion-red; a fine variety. 7s. 6d.

EVANGELINE.—Leaves rich green, with dark zone; smooth circular flowers, colour French white, shading to delicate rose blush, large globular trusses, very distinct and beautiful. 7s. 6d.

H. W. LONGFELLOW.—Flowers finely formed, colour deep salmon flesh with red centre, with trusses large and globular; leaves dark green, with brown zone; a very fine variety. 7s. 6d.

KATE ANDERSON.—Flowers average size and form, trusses globular, colour the most brilliant shade of true scarlet; blooming profusely, likely to prove the most effective scarlet known; leaves deeply zoned. 7s. 6d.

MAGNA CHARTA.—Flowers very large and smooth, top petals the same size as the bottom ones, colour deep red; leaves pale green, with obscure zone. 7s. 6d.

The above set for 40s.

PELARGONIUM ROSALIE (HOLLAND).

The peculiar good qualities of this variety consist of free and compact habit of growth, with a moderate supply of rich salmon-red flowers of great substance and excellent form; large trusses, well furnished with flower-buds, mounted on stout stalks, well above the foliage. For Winter Decoration it will be found invaluable. Received Certificates during the past season for its general usefulness. 7s. 6d.

A NEW GENERAL PLANT CATALOGUE in preparation, and, when ready, will be forwarded to all previous Customers and Applicants.

Victoria and Paradise Nurseries, Holloway, London, N.

SOWERBY'S ENGLISH BOTANY.

Nos. 1 to 39, Price Five Shillings each, now ready, contain

SCIENTIFIC AND POPULAR DESCRIPTIONS, WITH HAND-PAINTED FIGURES, OF NINE HUNDRED AND ONE PLANTS.

Subscribers to this great national undertaking may commence at any time, without buying the back numbers all at once. Prospectuses and Specimens gratis.

SOWERBY'S ENGLISH BOTANY, VOL. V.,

Just published, contains all the

THISTLES.	WORMWOODS.	LEOPARD'S-BANES.	BUTTER-BURS.	DANDELIONS.
BURDOCKS.	CUDWEEDS.	BUR MARYGOLDS.	CAT'S-EARS.	LETTUCES.
KNAPWEEDS.	GROUNDSELS.	FLEA-BANES.	HAWK-BITS.	SOW-THISTLES.
CHAMOMILES.	RAGWORTS.	GOLDEN-RODS.	OX-TONGUES.	HAWK'S-BEARDS.
YARROWS.	FLEAWORTS.	COLTSFOOTS.	GOAT'S-BEARDS.	HAWKWEEDS; etc.

Eight Parts at 5s.; complete in cloth, 43s.; in half morocco, 47s.; whole morocco, 53s. 6d.

LONDON: ROBERT HARDWICKE, 192, Piccadilly.

At all the Libraries, in 2 vols. demy 8vo, cloth,

RESEARCHES INTO THE HISTORY OF THE BRITISH DOG,

FROM ANCIENT LAWS, CHARTERS, AND HISTORICAL RECORDS.

WITH ORIGINAL ANECDOTES, AND ILLUSTRATIONS OF THE NATURE AND ATTRIBUTES OF THE DOG,

From the Poets and Prose Writers of Ancient, Mediæval, and Modern Times.

BY GEORGE R. JESSE.

With Twenty Whole-Page Engravings, and Thirteen Tail-Pieces, designed and etched by the Author.

"The few meagre scraps hitherto published on the History of the British Dog, and the Ancient Hunting Establishments of England, have been so frequently copied by one writer from another, and inserted over and over again in periodicals, that the probabilities are strong in favour of original and genuine research being received with interest by the public."—*Extract from Preface.*

BARR & SUGDEN.

THE METROPOLITAN.

SEED BULB & PLANT WAREHOUSE

12, KING STREET, COVENT GARDEN, W.C.

Orders amounting to 21s. sent Carriage Paid.

For SPECIALITIES in VEGETABLE SEEDS, see our large Advertisement, No. 40.

For improving our Native Flora, enriching Woodland Walks, Wildernesses, Shrubberies, Railway Embankments, Rockeries, Carriage Drives beside Rivulets, etc. Cheap Mixed Flower- Seeds for the above purposes, 3s. 6d. to 5s. 6d. per lb. 7 lbs. to 10 lbs. per acre.

For Park Scenery, Islands, Select Plantations, Small Orchards, Extensive Lawns, Mounds, Sub-Tropical Gardens, and Raised Flower Beds; also Verandahs, Rustic Arches; likewise Sloping Banks, etc.

Splendid named GLADIOLI for exhibition, etc., per dozen, 3s. 6d., 5s. 6d., 7s. 6d., 10s. 6d., 12s., 15s., 18s., 21s., and 30s. Per 100, 25s. to 100s.

MIXED GLADIOLI, for large effective masses, per 100, 10s. 6d., 15s., and 21s. Per dozen, 2s. 6d. and 3s. 6d.

Permanent Pasture Grass Seeds and Clovers mixed for all soils.

Fine Lawn Grass Seeds for all Soils.

COMPLETE COLLECTIONS of VEGETABLE SEEDS, for one year's supply, 10s. 6d., 15s. 6d., 20s., 30s., 42s., 63s., 84s., and 105s.

COLLECTION of FLOWER-SEEDS, post-paid, 2s. 6d., 3s. 6d., 5s. 6d., 7s. 6d., 10s. 6d., 15s., 21s., 30s., 42s. to 105s.

ORNAMENTAL GOURDS ARE EXTREMELY ATTRACTIVE BOTH FOR THEIR FOLIAGE AND FRUIT.

When Ripe, the Fruit forms a unique Hall and Drawing-Room Ornament.

The GOURD SEEDS, in warm localities, can be sown early in May where intended to grow.

NATHANIEL HAWTHORNE ON THE GOURD.—“Speaking of Gourds, I must say a word of their beautiful and varied forms. They presented an endless diversity of urns and vases, shallow or deep, scalloped or plain, moulded in patterns which a sculptor would do well to copy, since art has never invented anything more graceful. A hundred Gourds in the garden were worthy—in my eyes, at least,—of being rendered indestructible in marble. If ever Providence (but I know it never will) should assign me a superfluity of gold, part of it shall be expended for a service of plate, or most delicate porcelain, to be wrought into the shape of Gourds, gathered from vines which I will plant with my own hands. As dishes for containing vegetables they would be peculiarly appropriate.”

SELECTIONS of ORNAMENTAL GOURDS, including the Miniature, Medium, and Mammoth varieties, or either separate, 10 varieties, 2s. 6d.; 15 do., 3s. 6d.; 20 do., 5s. 6d.; 30 do., 7s. 6d.; 40 do., 10s. 6d.; 50 do., 12s. 6d.; 100 do., 21s.; 200 do., 42s.

INTERNATIONAL BOTANICAL AND HORTICULTURAL CONGRESS.

Those who intend to Exhibit Plants at the above grand gathering should use STANDEN'S GARDENER'S and AMATEUR'S FRIEND MANURE, a compound of the richest fertilizing phosphates known; it promotes a healthy vigorous growth in Plants, increases the size, and enriches the colour of the Flowers, and greatly improves the foliage. In all cases it should be laid on the surface dry and watered in, thus gradually and continuously nourishing the plant, and effecting, in its application, a considerable saving in labour.

No. 1 quality, for Hard-wooded Stove and Greenhouse Plants, Fruit Trees, Roses, Vegetables, and Lawns. Sample Canisters, 1s. and 2s. 6d. and Bags, 5s. 6d., 10s. 6d., and 21s.

No. 2 quality, for Soft-wooded Plants and Bulbs. Sample Canisters, 1s. and 2s. 6d.; and Bags, 5s. 6d., 10s. 6d., and 21s.

The above valuable Manure can be procured from any respectable Nurseryman or Seedsman.

THE FOLLOWING ARE A FEW OF THE AGENTS:—

For London:—
Messrs. E. G. Henderson & Son, St. John's Wood.
Messrs. Hugh Low & Co., Upper Clapton.
Messrs. James Carter & Co., High Holborn.
Messrs. Downie, Laird, & Laing, Forest Hill and Edinburgh.
Messrs. Hooper & Co., Covent Garden.
Mr. B. S. Williams, Paradise Nursery, Holloway.
Mr. Green, Covent Garden.
Mr. Kennedy, Covent Garden.
Mr. Gaines, Covent Garden.

For London:—
Mr. Buck, Covent Garden.
Mr. William Cutbush, Barnet.
Mr. Macintosh, Hambersmith.
Mr. Ansell, Camden Town.
Mr. W. Barnes, Camberwell,
For the Provinces:—
Mr. Charles Turner, Slough.
Mr. W. Dean, Bradford.
Mr. C. Felton, Erdington, Birmingham.
Mr. S. May, Leeds.
Mr. F. G. Godwin, Sheffield.
Mr. W. Dillstone, Heddingham, Essex.

For the Provinces:—
Mr. T. Hobbs, Landport.
Mr. J. Scott, Yeovil, Somerset.
Mr. Charles H. Dickson, Manchester.
Messrs. Smith & Son, Aberdeen.
Messrs. Jackson & Son, Kingston-on-Thames.
Messrs. John Kearsley & Son, Leeds.
Messrs. J. & J. Chater, Cambridge.
Messrs. Dickson & Brown, Manchester.
Messrs. J. & W. Shaw, Swansea.

** Additional names of Agents will be given from time to time.

LOVELL REEVE & CO., 5, HENRIETTA STREET, COVENT GARDEN.

PEPEROMIA MARMORATA.

Marble-leaved Peperomia.

Nat. Ord. PIPERACEÆ.—DIANDRIA MONOGYNIA.

Gen. Char. Amentum floribus dense v. remote tectum. Bracteæ peltatæ. Stamina 2, lateralia, filamentis teretibus v. subulatis. Antheræ 2-loculares, loculis oppositis nunc effœtis sursum confluentibus hinc subunilocularibus. Ovarium sessile, rectum v. obliquum, stigmatē sessili deciduo penicillato v. fimbriato. Baccæ sessilis, fere exsuccæ, pericarpio tenui. Semen conforme, testa membranacea v. coriacea.—Herbæ carnosæ, ramosæ. Folia opposita, alterna v. verticillata, exstipulatis. Amenta axillaria terminalia v. oppositifolia.

PEPEROMIA *marmorata*; herbacea, robusta, glaberrima, caule tereti ramoso, foliis oppositis confertis carnosis-coriaceis ovatis obtusis basi profunde cordato-2-lobis lobis incumbentibus integerrimis supra fusco-viridibus albo-marmoratis, subtus pallidioribus, 5-nerviis, amentis subterminalibus 4-6 poll. longis gracilibus pedunculatis teretibus, floribus spiraliter dispositis, bracteis peltatis, apice dilatato orbiculari, pedicello crasso obconico, ovario obovoideo obliquo glanduloso, stigmatē subterminali sessili disciformi fimbriato.

The genus *Peperomia*, though generally consigned to the "Botanic Garden" by horticulturists, contains a considerable number of species extremely well worth cultivation, and, amongst others, the subject of the Plate. For, unlike most other variegated-leaved favourites, this retains more or less of its beauty throughout the year. It is a native of South Brazil, where it was discovered by Mr. Weir, collector for the Horticultural Society. It was received at Kew, first from Mr. Veitch, and afterwards from Mr. Wilson Saunders, F.R.S.,—in both cases with the name of *P. arifolia* (a very different plant, with peltate leaves). I find it nowhere described.

DESCR. A robust, branching, short, suberect plant, glabrous throughout, surface papillose with minute, translucent cells. Stems terete, branched, almost as thick as the little finger. Leaves petioled, opposite, three to five inches long, ovate-cor-

date, deeply two-lobed at the base, the lobes rounded and overlapping, quite entire, succulent, five-nerved, upper surface opaque, dull green, marbled with white, under pale green. *Spikes* single or two to three together, erect, slender, four to six inches long, on stout, erect peduncles, about one-sixth of an inch diameter. *Flowers* in rather close spirals, but not crowded. *Bracts* peltate, summit orbicular, pedicel clavate. *Stamens* short; *anther* two-celled. *Ovary* papillose, broadly obovoid, oblique; *stigma* nearly terminal, discoid, with fimbriate edges.—*J. D. H.*

Fig. 1. Portion of amentum, with flower. 2 and 3. Side and front view of scale, stamens, and ovary :—*all magnified.*

ERICINELLA MANNII.

Cameroons Mountain Heath.

Nat. Ord. ERICACEÆ.—TETRANDRIA MONOGYNIA.

Gen. Char. Calyx 4-partitus, lacinia infima majore. Corolla campanulata, limbo 4-fido suberecto. Stamina 4, rarius 5, libera v. subconnata. Stigma peltatum. Ovarium 3-6-loculare, loculis pluri-ovulatis. Capsula 3-6-locularis, 3-6-valvis.—Fruticuli tenues, ericoidei, Africæ tropicæ et australis et Madagascariæ incolæ. Folia 3-4-natim verticillata, anguste linearia. Flores terminales, pedicellati, parvi. Bractearum 0.

ERICINELLA *Mannii*; frutex ramosissimus, 5-12-pedalis, ramis ramulisque pubescenti-tomentosis puberulisve, foliis 4-nis patulis v. appressis glabris nitidis, pedicellis folia superantibus, sepalis minoribus corolla dimidio brevioribus, antheris muticis inclusis, stylo breviter exserto.

ERICINELLA *Mannii*. *Hook. f. in Journ. Linn. Soc.* vi. 16 et vii. 205.

Till the expedition of Gustav Mann, late collector for the Royal Gardens of Kew, to the West Coast of Africa, the flora of the tropical mountains of that continent was totally unknown; now, thanks to his intrepidity and prudence, we have excellent dried collections and many living plants from the loftiest regions of that district hitherto visited by white men,—viz. Fernando Po and the Cameroons Mountains. From this curious country *Helichrysum Mannii* has already been figured (*ante*, Tab. 5431), and other curious things will hereafter appear. Meanwhile we here figure a type of vegetation equally familiar in Europe and South Africa, but which had not previously been known to inhabit the intermediate region. M. Mann found it at an elevation of 10,000 feet on Fernando Po, and between 4000 and 11,000 feet on the Cameroons Mountains, where it forms a shrub, sometimes twelve feet high. The other species of the genus, which is very closely allied to *Erica* itself, are found, one in Madagas-

ear and another in South Africa. Our specimens were raised from seed, and flowered in the Heath-house in July, 1863.

DESCR. A slender, bushy, erect shrub, four to ten feet high, with close-set, fastigiate, pubescent or tomentose branchlets. *Leaves* quaternate, close-set, whorled in fours, one-eighth of an inch long, linear, with revolute margins, glabrous. *Flowers* numerous, three or four together at the tips of all the branchlets, on short, curved pedicels, nearly globose, one-tenth of an inch long, dull-red. *Calyx-lobes* unequal, three of them ovate-oblong, half as long as the corolla, fourth linear-oblong, as long as the corolla, all ciliate at the base. *Corolla* subglobose, with four short, obtuse, ciliate lobes. *Stamens* included. *Anthers* four or five, broad, obcordate-oblong, slightly cohering. *Ovary* pubescent, six-celled. *Style* exerted; *stigma* broad, dilated, cup-shaped, dark-red.—*J. D. H.*

Fig. 1. Branch and leaves. 2. Leaf. 3. Apex of branch with flowers. 4. Flower. 5 and 6. Stamens. 7. Germen and transverse section of ovary:—*all magnified.*

POLYCHILLOS CORNU-CERVI.

Stag's-horn Polychilos.

Nat. Ord. ORCHIDÆ.—GYNANDRIA MONANDRIA.

Gen. Char. Sepala explanata, carnosâ, angustâ, libera; lateralibus sub-falcatis, leviter incurvis. Petala conformia, minora. Labellum posticum, unguiculatum, in disco foveatum, cum columnâ continuum, carnosum, complicatum, tripartitum, laciniis lateralibus runcinatis terminali lunato apiculato. Appendix circa foveam membranaceus, semicyathiformis, 5-
aristatus, dentibus duobus auctus: altero minore a latere columnæ, altero antico cultrato. Columna erecta, elongata, semiteres, basi bituberculata, clinandrio proclivi, rostello elongato decurvo. Stigma oblongum, excavatum. Pollina 2, cereacea, postice fissa, caudiculâ elongatâ, obovatâ, glandulâ ovali. *Lindl. Fol. Orch.*

POLYCHILLOS *cornu-cervi*; foliis distichis coriaceis cuneatis oblongis, pedunculis lateralibus erectis sursum clavatis multifloris subæqualibus, rachi alatâ.

POLYCHILLOS *cornu-cervi*. *Kuhl van Hass. Orch. tab. 1.*

PHALÆNOPSIS *cornu-cervi*. *Rehb. fil. Xen. Orch.*

Although long since discovered in Moulmein by Lobb, this curious plant had never reached England in a living state before the year 1864, when, through the kindness of the Rev. C. S. P. Parish, a few specimens of it were safely transmitted to Messrs. Low, some of which have already flowered.

Dr. Lindley had doubts as to whether *Polychilos* was, as a genus, really distinct from *Phalænopsis*, while Professor Reichenbach is decidedly of opinion that the two genera ought to be combined. Certainly the two species lately figured in this work (*Phalænopsis Luddemanniana* and *P. Sumatrana*) and which are nearly intermediate between the older kinds of *Phalænopsis* and the present *Polychilos*, go far to strengthen the views of the German Professor, but on the whole I have thought it better to retain for the present Dr. Lindley's name, as so much fresh light is now being thrown

upon the subject by the constant discovery of new species, and we shall therefore ere long be in a far better position to deal with the question in all its bearings.

P. cornu-cervi flowers freely in the summer months, and is readily grown among other Indian Orchids. Not more than four or five flowers on the same scape are ever open at the same time.

DESCR. An *epiphyte* with the habit of *Phalaenopsis*. *Leaves* nearly a span long, distichous, leathery, cuneate, oblong, about equal to the *peduncles*, which are nearly erect, clavate, and forming a broad *rachis*, on which from six to a dozen or more flowers open in succession. *Sepals* expanded, fleshy, narrow, acute, the lateral ones partially falcate. *Petals* similar to the sepals but rather smaller, of a yellowish-green barred with reddish-brown. *Lip* whitish, unguiculate, hollowed on the disk, continuous with the column, fleshy, folded inwards, tripartite, the lateral divisions being inclined from the apex and the centre one crescent-shaped and apiculate. By the hollow of the disk is a somewhat cup-shaped membranaceous appendage, usually furnished with five *aristæ* (awns) and two teeth, one in front the other in the rear. *Column* erect, elongated, half-rounded, with two tubercles at its base; the *clinandrium* lying low and flat, with an extended decurved beak.—*J. B.*

Fig. 1. Lip and column (*magnified*) seen in front. 2. Ditto, ditto, seen sideways.

1845

TACSONIA VAN-VOLXEMII.

Van Volxem's Passion-flower.

Nat. Ord. PASSIFLOREÆ.—PENTANDRIA TRIGYNIA.

Gen. Char. Calycis tubus elongatus, cylindricus; lobi 5, lineari-oblongi v. lanceolati, colorati. Petala 5 v. 0, calycis lobis concolora et uniformia. Corona faucis duplex v. simplex, brevis v. elongatus. Stamina 5, filamentis cum gynophoro longe connatis, apice liberis; antheræ versatiles, lineari-oblongæ. Ovarium longe stipitatum, 1-loculare; styli 3, stigmatibus capitatis; ovula placentis 3 affixa, plurima. Bacca intus pulposa, polysperma. Semina compressa, arillata, testa serobiculata.—Frutices scandentes, cirrhiferi. Folia alterna, lobata. Pedunculi sæpius solitarii, 1-flori, 3-bracteati. Flores sæpissime speciosi.

TACSONIA *Van-Volxemii*; ramis gracilibus foliisque subtus puberulis, foliis breviter petiolatis cordatis profunde 3-lobis, lobis anguste lanceolatis, petiolis glandulosis, acuminatis serrulatis, cirrhis elongatis, pedunculis solitariis longissimis capillaribus infra florem 3-bracteatis, bracteis parvis oblongis serrulatis, floribus amplis speciosis pendulis, calycis tubo basi globoso, lobis anguste lineari-oblongis dorso infra apicem apiculatis intus kernesinis, petalis consimilibus obtusis ima basi plaga pallida notatis, corona brevissima simplici denticulata violacea.

TACSONIA (§? PSILANTHUS) *Van-Volxemii*. *Funk*, in *Journ. of Hort.* v. 5. Feb. 1861. *Lemaire, Jard. Fleuriste.* t. 381.

One of the most striking and beautiful plants hitherto introduced into Europe, easy of cultivation, and continuing a considerable time in flower. It promises to rival the *Lapageria*, and even to eclipse it. The genus to which it belongs inhabits South America, principally the valleys of the Andes; and it is stated in Lemaire's 'Jardin Fleuriste' that this species is a native of the temperate region of the province of Antioquia, in New Granada, where it is cultivated by the natives. It was introduced into Belgium, in 1858, by a zealous amateur, M. Van Volxem, who found it in a garden at Bogotá; and I have native specimens collected by Goudot in

the Quindiu Andes, in the same country. For the specimen here figured, as well as for a fine young plant presented to the Royal Gardens, I am indebted to Messrs. Lucombe and Price, of Exeter. It succeeds well in a warm greenhouse, and according to its discoverer it resists a temperature of the freezing-point in its own country.

DESCR. *Stems* slender, slightly pubescent, as are the under surface of the leaves, petals, and peduncles. *Leaves* three to five inches long, cordate at the base, deeply three-lobed; *lobes* membranous, lanceolate, acuminate, serrulate. *Cirrhii* slender. *Peduncles* exceedingly long and slender, almost capillary, ten to twenty inches long, one-flowered, tri-bracteate. *Bracts* placed a little below the flower, small, oblong, serrulate. *Flowers* five to seven inches in diameter, bright-red. *Calyx-tube* green, globose at the base, three-quarters of an inch long; *lobes* oblong or oblong-lanceolate, keeled; *keel* and *base* externally green. *Petals* similar to the calyx-lobes, yellowish at the very base. *Corona* inconspicuous, toothed, violet. *Gynophore* two inches long.—*J. D. H.*

Fig. 1. Portion of corona :—*magnified.*

MILTONIA ANCEPS.

Two-edged-stemmed Miltonia.

Nat. Ord. ORCHIDÆ.—GYNANDRIA MONANDRIA.

Gen. Char. (Vide supra, TAB. 4109.)

MILTONIA *anceps*; pseudobulbis compressis versus apicem attenuatis, foliis binis oblongis, racemo ancipiti unifloro foliis longiore articulato, sepalis petalisque lanceolato-oblongis patenti-recurvis, labello rhomboideo-lyrato apice recurvo basi pubescente bilamellato dente intermedio brevioris adjecto, clinandrio circulari carnosio dentato. *Lindl. Fol. Orch.*

MILTONIA *anceps*. *Rchb. Xen. Orch. tab. xxi.*

ODONTOGLOSSUM *anceps*. *Klotzsch, in Allgem. Gart. Aug. 9, 1851.*

This singular *Miltonia* was originally introduced from Brazil, by the Messrs. Loddiges with whom it flowered, but no figure of it has appeared in any English work and the plant itself seems to have disappeared for many years from our gardens. Fortunately a few plants of it were met with by Mr. Blunt, and sent to his employers Messrs. H. Low & Co. of Clapton, and from one of these, which flowered at Knypersley in the spring of 1865, Mr. Fitch obtained his drawing.

The species is cultivated as easily and requires the same treatment as the other *Miltonias*.

DESCR. *Pseudo-bulbs* two-leaved, two or three inches long, adjoining each other, of the pale-yellowish tint usual in the genus. *Leaves* two on each pseudo-bulb, narrow-oblong, tapering at their extremity, shorter than the *flower-scapes*, which are two-edged and partially concealed by long sheathing pointed bracts. *Flowers* one on each scape, two inches in diameter. *Sepals* and *petals* oblong-lanceolate, spreading, recurved, olive-coloured. *Lip* white with a few purple streaks and dots, somewhat lyre-shaped, slightly recurved at the apex, same length as the petals, along its pubescent base are two lamellæ, with a third (sometimes in the form of a tooth) raised between them. *Clinandrium* round, and toothed.—*J. B.*

MUSSÆNDA LUTEOLA.

Captain Grant's Mussænda.

Nat. Ord. RUBIACEÆ.—PENTANDRIA MONOGYNIA.

Gen. Char. Calycis tubus oblongus v. turbinatus; lobi 5, decidui, uno sæpissime in folium amplum coloratum petiolatum producto. Corolla infundibuliformis, tubo elongato, fauce villosa, limbo 5-partito. Antheræ 5, sessiles, inclusæ, lineares. Ovarium 2-loculare; stylus gracilis, stigmatibus linearibus; ovula ∞ . placentis stipitatis revolutis 2-lobis affixa. Bacca apice cicatricata, polysperma. Semina parva.—Frutices, arbores et suffrutices tropici. Folia petiolata, ovata; stipulæ 2, liberæ v. connatæ. Flores in corymbos terminales dispositi, bracteolati, sæpissime albi v. flavi.

MUSSÆNDA *luteola*; suffrutex gracilis, ramis striatis teretibus et foliis subtus inflorescentia pubescenti-tomentosis, foliis 1–2 poll. longis breviter petiolatis ovato-oblongis lanceolatisve acuminatis membranaceis, stipulis parvis ovato-subulatis, corymbis paucifloris, calycis lobis setaceis uno foliaceo petiolato oblongo albo v. pallide flavo, corollæ tubo $\frac{1}{2}$ –1 poll. longo, lobis late ovatis longe abrupte acuminatis luteolis, bacca parva sicca.

MUSSÆNDA *luteola*. *Delil. in Caill. Pl. Afriq. 65. t. 1. f. 1. DC. Prodr. v. 4. p. 371.*

A very pretty plant and one of unusual interest, as being first introduced into Europe by Captain Grant, the companion of the lamented Speke in his daring exploration of the headwaters of the Nile. During that memorable voyage Captain Grant made a very valuable collection of plants, that have been published by Dr. Thomson in the appendix to Speke's Narrative, and he further brought to Kew the seeds from which the specimen here figured was produced, and which flowered in our stove in August, 1863. It was found by Cailliaud, during his voyage to Meroe, on the Nile, in about lat. 10° N. Captain Grant collected it in the rocky ravines of Gani and Madi, and it was again found in the White Nile country, during Consul Petherick's expedition.

Delile refers the *M. lanceolata*, Spreng. (*Ophiorhiza lanceolata*, Forskahl, *Manettia lanceolata*, Vahl, *Mussænda Ægypt-*

tact, Lamk.), of Arabia, to this, but as it does not at all agree with Forskahl's description, I refrain from quoting these synonyms.

DESCR. A small, erect, slender, twiggy shrub, pubescent on the branchlets, leaves below, and inflorescence. *Leaves* one and a half to two inches long, shortly petioled, ovate- or oblong-lanceolate, acuminate, membranous. *Stipules* ovate-subulate. *Corymbs* few-flowered; *flowers* in threes, usually shortly pedicelled. *Calyx-teeth* filiform or subulate, except one, that forms a white or yellowish, oblong or ovate-cordate, membranous leaf, half to three-quarters of an inch long. *Calyx-tube* an inch long and under; *lobes* broadly ovate, with long acuminate points, pale-yellow.—*J. D. H.*

Fig. 1. Flower with foliaceous calyx-lobe removed. 2. Germen. 3. Interior of throat of corolla, with anthers:—*all magnified.*

NEW COLONIAL FLORAS.

HANDBOOK OF THE NEW ZEALAND FLORA; a

Systematic Description of the Native Plants of New Zealand, and the Chatham, Kermadec's, Lord Auckland's, Campbell's, and Macquarrie's Islands. By Dr. J. D. HOOKER, F.R.S. Demy 8vo. Part I., 475 pp., 16s. Published under the auspices of the Government of that colony.

A compendious account of the plants of New Zealand and outlying islands, published under the authority of the Government of that colony. The present Part contains the Flowering Plants, Ferns, and Lycopods; the Second Part, containing the remaining Orders of *Cryptogamia*, or Flowerless Plants, with Index and Catalogues of Native Names and of Naturalized Plants, will appear shortly.

FLORA AUSTRALIENSIS; a Description of the Plants of

the Australian Territory. By GEORGE BENTHAM, F.R.S., President of the Linnean Society, assisted by FERDINAND MUELLER, F.R.S., Government Botanist, Melbourne, Victoria. Demy 8vo. Vol. I. 566 pp., and Vol. II. 530 pp., 20s. each. Published under the auspices of the several Governments of Australia. Vol. III. in the press.

Of this great undertaking, the present volumes, of more than a thousand closely-printed pages, comprise about one-fourth. The materials are derived not only from the vast collections of Australian plants brought to this country by various botanical travellers, and preserved in the herbaria of Kew and of the British Museum, including those hitherto unpublished of Banks and Solander, of Captain Cook's first Voyage, and of Brown in Flinders', but from the very extensive and more recently collected specimens preserved in the Government Herbarium of Melbourne, under the superintendence of Dr. Ferdinand Mueller. The descriptions are written in plain English, and are masterpieces of accuracy and clearness.

FLORA HONGKONGENSIS; a Description of the Flow-

ering Plants and Ferns of the Island of Hongkong. By GEORGE BENTHAM, P.L.S. With a Map of the Island. Demy 8vo, 550 pp., 16s. Published under the authority of Her Majesty's Secretary of State for the Colonies.

The Island of Hongkong, though occupying an area of scarcely thirty square miles, is characterized by an extraordinarily varied Flora, partaking, however, of that of South Continental China, of which comparatively little is known. The number of Species enumerated in the present volume is 1056, derived chiefly from materials collected by Mr. Hinds, Col. Champion, Dr. Hance, Dr. Harland, Mr. Wright, and Mr. Wilford.

FLORA OF THE BRITISH WEST INDIAN ISLANDS.

By Dr. GRISEBACH, F.L.S. Demy 8vo, 806 pp., 37s. 6d. Published under the auspices of the Secretary of State for the Colonies.

Containing complete systematic descriptions of the Flowering Plants and Ferns of the British West Indian Islands, accompanied by an elaborate index of reference, and a list of Colonial names.

FERNS AND MOSSES.

THE BRITISH FERNS; or, Coloured Figures and Descriptions, with the needful Analyses of the Fructification and Venation, of the Ferns of Great Britain and Ireland, systematically arranged. By Sir W. J. HOOKER, F.R.S. Royal 8vo, 66 Plates, £2. 2s.

The British Ferns and their allies are illustrated in this work, from the pencil of Mr. FITCH. Each Species has a Plate to itself, so that there is ample room for the details, on a magnified scale, of Fructification and Venation. The whole are delicately coloured by hand. In the letterpress an interesting account is given with each species of its geographical distribution in other countries.

GARDEN FERNS; or, Coloured Figures and Descriptions, with the needful Analyses of the Fructification and Venation, of a Selection of Exotic Ferns, adapted for Cultivation in the Garden, Hothouse, and Conservatory. By Sir W. J. HOOKER, F.R.S. Royal 8vo, 64 Plates, £2. 2s.

A companion volume to the preceding, for the use of those who take an interest in the cultivation of some of the more beautiful and remarkable varieties of Exotic Ferns. Here also each Species has a Plate to itself, and the details of Fructification and Venation are given on a magnified scale, the Drawings being from the pencil of Mr. FITCH.

FILICES EXOTICÆ; or, Coloured Figures and Description of Exotic Ferns, chiefly of such as are cultivated in the Royal Gardens of Kew. By Sir W. J. HOOKER, F.R.S. Royal 4to, 100 Plates, £6. 11s.

One of the most superbly illustrated books of Foreign Ferns that has been hitherto produced. The Species are selected both on account of their beauty of form, singular structure, and their suitableness on cultivation.

FERNY COMBES; a Ramble after Ferns in the Glens and Valleys of Devonshire. By CHARLOTTE CHANTER. *Second Edition.* Fep. 8vo, 8 coloured plates by Fitch, and a Map of the County, 5s.

HANDBOOK OF BRITISH MOSSES, containing all that are known to be Natives of the British Isles. By the Rev. M. J. BERKELEY, M.A., F.L.S. Demy 8vo, pp. 360, 24 Coloured Plates, 21s.

A very complete Manual, comprising characters of all the species, with the circumstances of habitation of each; with special chapters on development and structure, propagation, fructification, geographical distribution, uses, and modes of collecting and preserving, followed by an extensive series of coloured illustrations, in which the essential portions of the plant are repeated, in every case on a magnified scale.

LOVELL REEVE & CO., 5, HENRIETTA STREET, COVENT GARDEN.

J. B. BROWN & CO.'S NEW PATENT B B LAWN MOWER.

Manufactured
by
J. B. Brown & Co.,
148,
Upper Thames
Street,
London.

Guaranteed to
give perfect
satisfaction, and
if not approved of
may be at once
returned.

J. B. BROWN and Co., having so very successfully introduced, at the recent Meeting of the Bath and West of England Society at Hereford, in June 1865, the NEW PATENT B B LAWN MOWER, of their own manufacture, beg to mention that having supplied the large number of MACHINES ordered on that occasion, and up to the present time, with most unqualified satisfaction to every one, so far as they are aware, they are now actively preparing to execute further orders for the approaching season; and, owing to the large number of such orders already received, they would very respectfully solicit all intending orders to be sent with as little delay as possible,—say to be executed at any time during the opening of the spring, or in the course of the summer, as may be desired.

PRICES—including Carriage to any Railway Station or Shipping Port in England.

J. B. BROWN & CO.: OFFICES, 18, CANNON STEET, CITY, LONDON, E.C.
(Nearly opposite St. Swithin's Lane and "London Stone," and near London Bridge.)
WAREHOUSE (where Stock is kept), 148, UPPER THAMES STREET E.C.
(Opposite the City of London Brewery, and close to the London Bridge Steamboat Piers.)

HEATING BY HOT WATER.

It is now generally admitted that Buildings of any kind can be more effectually warmed by Hot Water than by any other means; but as so much depends on the way in which the Apparatus is fixed, it is of the greatest importance that it be done by experienced men.

J. JONES & SONS are prepared to estimate for Warming, to any extent—

GREENHOUSES.	CHURCHES.	FACTORIES.
CONSERVATORIES.	CHAPELS.	OFFICES.
VINERIES.	SCHOOLS.	WORKSHOPS.
HOTHOUSES.	READING ROOMS.	WAREHOUSES.
FORCING PITS.	LECTURE ROOMS.	DRYING ROOMS.
PEACH HOUSES.	BILLIARD ROOMS.	CELLARS.
PINE STOVES.	HALLS AND PASSAGES.	COACH-HOUSES.
ORCHARD HOUSES.	BATHS.	HARNES ROOMS.

J. JONES & SONS' Apparatus is simple in construction, moderate in cost, and economical in working.

It is equally available for the Amateur's Greenhouse, or the longest range of Forcing Houses; for the smallest Chapel or the largest Church; for Private Offices, or those of Public Companies.

It is admirably adapted for Dwelling Houses, as coils of pipes can be placed in any part, for warming the various rooms. One or more Baths may be heated from the same boiler, and a constant supply of hot water obtained in any part of the house.

For Warehouses and Workshops this system of heating is unsurpassed, as it is not only the means of keeping goods dry, but it also adds to the comfort of the workpeople, and thereby effects a saving in labour.

J. JONES & SONS recommend boilers of all kinds being set in brickwork, if possible; but portable boilers can be supplied, if required.

MATERIALS.—All Materials supplied will be of the best quality.

DELIVERY.—Boilers of various kinds, and pipes and connections, being always in stock, can, at a very short notice, be sent to any part.

FIXING.—The Fixing will be done by experienced men, fully capable of finishing properly any work they may undertake; and J. JONES & SONS are prepared to guarantee the effectual working of any apparatus fixed by their own men.

ESTIMATES.—Plans and Estimates will be sent on application.

J. JONES & SONS,
IRON MERCHANTS AND HORTICULTURAL ENGINEERS,

CURTIS'S
BOTANICAL MAGAZINE,

COMPRISING

THE PLANTS OF THE ROYAL GARDENS OF KEW,
AND OF OTHER BOTANICAL ESTABLISHMENTS IN GREAT BRITAIN,
WITH SUITABLE DESCRIPTIONS;

BY

JOSEPH DALTON HOOKER, M.D., F.R.S. L.S. & G.S.,

Director of the Royal Botanic Gardens of Kew.

Nature and Art to adorn the page combine,
And flowers exotic grace our northern clime.

LONDON:

LOVELL REEVE & CO., 5, HENRIETTA STREET, COVENT GARDEN.

1866.

THE HYDROPULT,

AN INVENTION FOR THROWING WATER BY HAND-POWER.

(SECURED BY ROYAL LETTERS PATENT.)

Weights but 8 lbs.

Will throw 7 or 8 Gallons of Water per minute 50 feet, when worked by the power of one Man.

PRICE LIST.

Complete with Brass Cylinders and Japanned Stirrup, £1. 12s. 6d.

Complete with Brass Cylinders and Copper Stirrup, £2. 2s.

The price, "complete" as above, includes 2½ feet Suction, and 3 feet Delivery Hose, Galvanized Wire Strainer, Rose, and Small Jet.

THE HYDROPULT

Is invaluable for use in the Garden for

WATERING BEDS,
SPRINKLING PLANTS,
DROWNING OUT INSECTS,
CLEANSING TREES FROM SMUTS,
DRESSING WITH LIQUID MANURE, ETC. ETC.

THE HYDROPULT

Is desirable in every Household for

WASHING WINDOWS.
WETTING SIDE WALKS,
SPRINKLING STREETS,
WASHING CARRIAGES,
EMPTYING CISTERNS,
FILLING BARRELS,
A SPRAY BATH, ETC. ETC.

ORDERED BY THE WAR DEPARTMENT AS FIRE ENGINES.

ROBERT HOGG, LL.D. & F.L.S., REV. H. DOMBRAIN, A.B., SHIRLEY HIBBERD, ESQ., F.R.H.S., THOMAS RIVERS, ESQ. (the eminent Florist), and other well-known gentlemen, recommend the Hydropult as an Invaluable Garden Implement.

The Hydropult will draw water horizontally, if necessary, through Two Hundred Feet Suction Hose, and force it through Delivery Hose to an altitude of One Hundred Feet.

THE GREENHOUSE AND CONSERVATORY HYDROPULT.

A NEW AND BEAUTIFUL IMPLEMENT,

Weighing scarcely 5 lbs.

And specially adapted for use in the Greenhouse and Conservatory.

Price 35s.

Complete, with Brass Cylinders and Copper Stirrup, 2½ feet Suction and 3 feet Delivery Hose, Strainer, Rose Jet, and Fan.

This New Implement must necessarily supersede Syringes and other devices of the kind, for it will be found much more effective in its operation.

A LADY CAN WORK IT FOR HOURS WITHOUT FATIGUE.

CAUTION.—Important to the Public.—The extensive sale of the Hydropult has excited the cupidity of so-called respectable, but in reality unprincipled Manufacturers, who are now palming on the Public worthless imitations of the Hydropult, and through their connections are enabled to place said devices on exhibition, and for sale, in many of the principal Ironmongery and Seed Establishments throughout the City and provinces. These devices resemble in many respects the Hydropult in appearance, and are calculated to deceive the unsuspecting. The Proprietor, therefore, issues this Caution, and respectfully intimates that parties wishing to purchase the Hydropult should examine the machine offered for sale, and see if it has attached thereto a label, with the following words:—"The Hydropult, Vose's Patent, manufactured only by GRIFFITHS & BROWITT, Birmingham. CHARLES POMEROY BUTTON, Proprietor, & and 143, Cheapside, London." Unless this label is attached, the machine is not the Hydropult.

PROSPECTUSES, WITH TESTIMONIALS, ON APPLICATION.

HYDROPULT SHOW-ROOM, 142 & 143, CHEAPSIDE, LONDON.

CHARLES POMEROY BUTTON, PROPRIETOR.

BOTANICAL MAGAZINE ADVERTISER.

SHANKS' PATENT LAWN MOWERS FOR 1866.

Patronized on Five separate occasions, during the Season of 1864, by

HER MAJESTY THE QUEEN,

AND ONCE BY HIS MAJESTY THE KING OF SAXONY;

AGAIN ON FOUR SEPARATE OCCASIONS DURING THE SEASON OF 1865 BY HER MAJESTY THE QUEEN;

ONCE BY HIS MAJESTY THE KING OF HOLLAND;

AND ONCE BY HIS MAJESTY THE KING OF PRUSSIA.

HORSE MACHINE.

PONY MACHINE.

HAND MACHINE.

ALEXANDER SHANKS & SON, in presenting their LAWN MOWERS for the approaching season, are gratified to be able to state that the demand for their celebrated Machines is rapidly increasing.

A. S. & SON, in introducing Improvements into their Machines, have been careful that no Improvement be introduced which has merely novelty to recommend it, but that the advantages in point of durability and simplicity of construction, which have always been a peculiarity of their Machines, should still remain.

A. S. & SON can confidently assure their numerous Friends and Customers and the Public generally that their endeavour will always be to supply a Machine, first-class in every way, one which cannot be surpassed if even equalled, whether for simplicity of construction, ease in working, or durability. None but the best materials and skilled workmen are employed in the manufacture of their Machines.

PRICES—Including Carriage to most of the principal Railway Stations and Shipping Ports in the Kingdom.

SHANKS' NEW PATENT HAND MACHINE FOR 1866.

Silent Movement, 20s. extra; Boots for Horse's Feet, 24s. per Set.

SHANKS' PATENT LAWN MOWERS cut the Grass on uneven as well as on level Lawns; and it is quite immaterial whether the Grass be *wet or dry*.

Every Machine warranted to give ample satisfaction, and if not approved of, can be at once returned.

ALEXANDER SHANKS & SON,
27, LEADENHALL STREET, LONDON.
MANUFACTORY, DENS IRONWORKS, ARBROATH.

A. S. and SON keep a Stock of Lawn Mowers at 27, Leadenhall Street, London, from which Orders can be at once executed. They also have at their London Warehouse a staff of experienced Workmen thoroughly acquainted with all the details of these Machines, so that they are enabled to repair Lawn Mowers in London as well as at the Manufactory.

GREEN'S PATENT SILENS MESSOR,

OR

NOISELESS LAWN MOWING, ROLLING AND COLLECTING MACHINES.
 FITTED WITH PATENT SELF-SHARPENING CYLINDER CUTTERS.

By Special Appointment
 Sole Manufacturer

To Her Most Gracious
 Majesty the Queen.

Every Machine is warranted to give entire satisfaction, and if not approved of can be returned unconditionally.

Green's Patent Lawn Mowers have proved to be the best, and have carried off every prize that has been given in all cases of competition.

PRICES OF HAND MACHINES.

" 12 "	4 10 0	" "	" 20 "	8 0 0	Suitable for two persons
" 14 "	5 10 0	Suitable for one person	" 22 "	8 10 0	" "
" 16 "	6 10 0	" "	" 24 "	9 0 0	" "

Prices of Horse, Pony, and Donkey Machines, including patent self-delivery box; cross stay complete; suitable for attaching to ordinary chaise-traces or gig harness.

To cut 26 inches ...	£13 0 0	Leather Boots for Donkey, 18s.	To cut 30 inches ...	£21 0 0	Leather Boots for Pony, 22s.
" 28 "	15 0 0		" 36 "	24 0 0	
" 30 "	17 0 0		" 42 "	27 0 0	
		" 48 "	30 0 0		

The 26, 28, and 30 inches can easily be worked by a donkey, or by two men, on an even lawn, the 30 and 36 inches by a pony, and 42 and 48 inches by a carriage horse; and, as the Machines make no noise in working, the most spirited animal can be employed without fear of its running away, or in any way damaging the Machine.

Both the Horse, Pony, Donkey, and Hand Machines possess (over all other Makers) the advantages of self-sharpening: the cutters being steel on each side, when they become dull or blunt by running one way round the cylinder, can be reversed again and again, bringing the opposite edge of the cutter against the bottom blade, when the Machine will cut equal to new. Arrangements are made that the cylinder can be reversed, by any unexperienced person, in two or three minutes.

The above Machines are made from the best materials, and of superior workmanship; are delivered Carriage Free to all the principal Railway Stations and Shipping Ports in England.

GREEN'S IMPROVED NEW PATENT ROLLER,

NEW ZONALE PELARGONIUM, WILTSHIRE LASS.**DOWNIE, LAIRD, & LAING**

Have much pleasure in introducing this splendid Novelty, which was pronounced by the Members of the Floral Committee of the Royal Horticultural Society, and also by the Judges of the Royal Botanic Gardens, Regent's Park, as the finest PINK PELARGONIUM ever exhibited, and was awarded a First-class Certificate on each occasion.

The following description is from the Journal of the Royal Horticultural Society of London:—"One of the finest of the pink-flowered Bedding varieties yet seen, remarkable, not so much for size of flower as for size and completeness of truss; the leaves were marked with a pale zone; the flowers were rosy-pink; the base of the upper petals white, and the trusses are remarkably large and dense, having the valuable property of retaining their blossoms for a long time in the truss."

PRIMULA, CALCEOLARIA, ETC.

WM. CUTBUSH AND SON are now sending out Seed of their superb **PRIMULA SINENSIS FIMBRIATA**, which has for many years given great satisfaction.

The 'Gardeners' Chronicle' of the 6th of January, in Notices to Correspondents, says:—"The blooms sent are remarkably fine, richly coloured, full, and densely fringed; they are evidently the produce of a capital strain."

The 'Journal of Horticulture' of the 23rd of January, says that "The finest and richest coloured Chinese Primulas we have yet seen are those raised by Messrs. Cutbush and Son."

Sealed packets, *2s. 6d.* and *3s. 6d.* each.

CALCEOLARIA (JAMES'S).—This is the finest herbaceous variety extant. Per packet, *2s. 6d.* and *3s. 6d.* each.

CINERARIA, from finest named varieties. Per packet *2s. 6d.* and *3s. 6d.* each.

HIGHGATE NURSERIES, LONDON, N.

GEORGE SMITH'S New Catalogue is now ready, with a splendid woodcut of Nosegay Geranium **LE GRAND**, which is the finest of all Geraniums for effect; together with descriptions of New Seedling Zonale Geraniums, **CHIEFTIAN**, **CHRISTABEL**, **EXHIBITOR**, **GLADIATEUR**, **GREAT EASTERN**, **SIR R. PEEL**, and **PINK PERFECTION**, which for their general fine qualities have received First-class Certificates at the Royal Botanic Gardens, and Royal Horticultural Gardens, South Kensington, and all of which G. S. can with the greatest of confidence recommend for description: see Catalogue, which also contains select lists of Show **FRENCH FANCY ZONALE AND VARIEGATED GERANIUMS**, **FUCHSIAS**, **VERBENAS**, **PETUNIAS**, **DAILLIAS**, **CHRYSANTHEMUMS**, **BEDDING PLANTS**, etc., and will be sent in exchange for one postage stamp.

TOLLINGTON NURSERY, HORNSEY ROAD, LONDON, N.

BENJAMIN EDGINGTON,

MARQUEE, TENT, RICK CLOTH, AND FLAG MANUFACTURER,

BY SPECIAL APPOINTMENT TO HER MAJESTY.

Marquees and Tents for Horticultural Shows, for Sale or Hire.

Netting for Fruit Trees, New and Second-hand; Scrims for Greenhouse Blinds, Frigid Domo, Garden Mats, etc.

Be particular to address—

BENJAMIN EDGINGTON (only),

2, DUKE STREET, LONDON BRIDGE, S. E.

No other Establishment.

NEW CHRYSANTHEMUMS.

JOHN SALTER'S Descriptive Catalogue for 1866 is now ready, and will be sent on receipt of two postage-stamps.

VERSAILLES NURSERY, WILLIAM STREET, VALE PLACE, HAMMERSMITH, W.

EDGINGTON'S GARDEN NETTING, the cheapest and most durable, $1\frac{1}{2}d.$ per square yard, or in quantities of 250, 500, or 1000 yards, carriage free.

EDGINGTON'S MARQUEES and GARDEN TENTS are the prettiest.

EDGINGTON'S MARQUEES, for hire, are the most handsome and capacious.

EDGINGTON'S RICK CLOTHS for sixty-one years have maintained their celebrity as the best.

HAYTHORN and BRITAIN'S NETTINGS. Sample of material free on application.

Be particular—Frederick Edgington & Co., Thomas Street, Old Kent Road, London, S.E.

A liberal Discount to the Trade!!!

International Exhibition, 1862, Class XIX.—Honourable Mention.

PLAGUES OF THE GARDEN. SIMPLE AND SAFE REMEDY.

By using the "APHIS WASH," these pests of the Garden, together with SCALE, CATERPILLARS, SLUGS, EARWIGS, etc., are immediately destroyed. Leaves no stain, but strengthens the Trees or Plants.

See 'GARDENERS' CHRONICLE,' August 19th, 1865.

'GARDENERS' MAGAZINE,' July 1st, 1865.

Sold by Chemists and others, in 1s. Bottles and 2s. 6d. a Gallon, with full Directions for Use.

NEW PLANTS FOR 1866.

B. S. WILLIAMS,

VICTORIA AND PARADISE NURSERIES, HOLLOWAY, LONDON, N.

Has great pleasure in offering, for the first time, the undermentioned **Splendid Plants**. Every care has been used in the selection of the several kinds, therefore he trusts they will give the highest satisfaction.

AZALEAS.

The two following beautiful varieties will be found great acquisitions, and B. S. W. feels confident that they must take first rank as exhibition plants, **PRINCESS ALEXANDRA** being raised from the same parents as *Elegantissima*, which has proved to be one of the best. The present variety will be found superior in quality, with much larger flowers, of a substance never before met with—the most important feature for prolonging the flowering season. **PRINCESS HELENA** is recommended for its general usefulness, being a free bloomer and quite distinct in habit.

PRINCESS ALEXANDRA.—A beautiful form of *Elegantissima*, with flowers $3\frac{1}{2}$ inches across; petals round and smooth, of great substance, slightly striped with deep crimson; a profuse bloomer. 31s. 6d.

PRINCESS HELENA.—Deep rosy pink, upper petals spotted with lake. The transparency of the flowers causes it to be distinct from all other kinds; habit good and free. 21s.

RHODODENDRONS.

These two elegant varieties are the Seedling productions of Mr. Bousie, late of Stoke Park, and were exhibited by him a few seasons since at the Royal Horticultural Meetings, and received Certificates of Merit as valuable additions for greenhouse decoration, being of free-flowering habit, a feature much wanted in a greenhouse Rhododendron.

DENISONII.—A Seedling from *Dalhousianum*, crossed with *Edgeworthii* and *Gibsonii*; a very fine variety, with splendid habit, well furnished with clean-looking flattish elliptic leaves and large campanulated flowers, pure white, with a lemon stain towards the base, very elegant (to be figured in the 'Floral Magazine' for May). 21s.

McNABBII.—From *ciliatum*, crossed with *Edgeworthii*; a very handsome plant, dwarfish in habit, with smooth elliptic leaves, and beautiful large blush-white flowers. 21s.

ACHIMENES.

Six beautiful varieties raised by Mr. Parsons, of Welwyn, and far in advance of any yet sent out. **PINK PERFECTION** the same size as *Mauve Queen*, and equal in substance, while **GRANDIS** gives the deepest violet shade; all the others will be found equally distinct in their separate colours. Received Certificates of Merit from the Floral Committee.

ADVANCE.—Flowers deep reddish purple, with a light spotted eye, shaded towards the margin, quite distinct. 7s. 6d.

ARGUS.—Colour rich plum, large deep orange eye, spotted with carmine, upper lobes of the flowers beautifully rayed towards the margin. 7s. 6d.

AURORA.—Flowers 2 inches across; colour rich heavy scarlet, with light yellow eye, very effective. 7s. 6d.

GRANDIS.—Flowers deep violet colour, with a deep orange eye, finely spotted and shaded with carmine. 7s. 6d.

PINK PERFECTION.—Flowers very large, colour magenta rose; the upper part of the eye rich carmine, the under lobes beautifully rayed with violet, very fine. 7s. 6d.

STELLA.—Flowers $2\frac{1}{2}$ inches across, clear magenta, orange eye, spotted with carmine, nicely serrated, distinct and beautiful. 7s. 6d.

The above set for 40s.

SWAINSONIA MAGNIFICA.

Figured in the 'Floral Magazine.'

A free-growing and free-flowering greenhouse climber; native of Australia; habit and character partakes of both the *Clianthus* and *Swainsonia*; while it has the robust and graceful-growing habit of the former, it produces more prominently the long pendent racemes of delicate bright-coloured pink flowers of the latter, with a pure white centre in the upper petal or lobe. It is well adapted for a cool greenhouse, treated as a pot plant or planted out in a border for pillars or trellis-work. 10s. 6d.

THUNBERGIA FRAGRANS.

B. S. W. believes this to be the most useful plant he has ever had the pleasure of offering, the whole character being quite distinct to any other *Thunbergia*, and whether grown as a pot plant or planted in the border for covering pillars and trellis-work, it will be invaluable, being free in growth, with ample foliage of a dark green, with great substance. It continues flowering throughout the year, but its principal period is during the winter months, a time when white flowers are scarce. Although grown in a warm stove, it has never shown the least sign of red spider, a most important feature in this class of plants. 10s. 6d.

PELARGONIUMS, BEDDING.

The following six Zonale Geraniums were raised by Shirley Hibberd, Esq., the eminent Horticulturist. It is well known that this gentleman has for some years given his close attention to this class of Bedding Plants, planting in his own experimental garden every kind that has been raised, and carefully testing or proving their worth as regards habit and novelty by comparison, etc. He has already raised several valuable kinds, but prior to this season none have been sent out under his name. B. S. W. has prevailed upon Mr. Hibberd to allow him to use his name. This will convince all that they are each varieties of more than ordinary merit, and real novelties.

ANDREW MARVEL.—Leaves bright green, with broad brownish zone flowers, large, and of remarkable substance and smoothness; colour vermilion-red; a fine variety. 7s. 6d.

EVANGELINE.—Leaves rich green, with dark zone; smooth circular flowers, colour French white, shading to delicate rose blush, large globular trusses, very distinct and beautiful. 7s. 6d.

H. W. LONGFELLOW.—Flowers finely formed, colour deep salmon flesh with red centre, with trusses large and globular; leaves dark green, with brown zone; a very fine variety. 7s. 6d.

KATE ANDERSON.—Flowers average size and form, trusses globular, colour the most brilliant shade of true scarlet; blooming profusely, likely to prove the most effective scarlet known; leaves deeply zoned. 7s. 6d.

MAGNA CHARTA.—Flowers very large and smooth, top petals the same size as the bottom ones, colour deep red; leaves pale green, with obscure zone. 7s. 6d.

The above set for 40s.

PELARGONIUM ROSALIE (HOLLAND).

The peculiar good qualities of this variety consist of free and compact habit of growth, with a moderate supply of rich salmon-red flowers of great substance and excellent form; large trusses, well furnished with flower-buds, mounted on stout stalks, well above the foliage. For Winter Decoration it will be found invaluable. Received Certificates during the past season for its general usefulness. 7s. 6d.

A NEW GENERAL PLANT CATALOGUE in preparation, and, when ready, will be forwarded to all previous Customers and Applicants.

EUGÉNIE DE GUÉRIN.

I.

Shortly will be published,

THE LETTERS OF EUGENIE DE GUERIN.

Crown 8vo, Price 7s. 6d.

MATTHEW ARNOLD, in his recently published Essays, says,—“At least one good book has appeared in 1865—THE LETTERS OF EUGÉNIE DE GUÉRIN.”

II.

Now ready, a Second Edition,

THE JOURNAL OF EUGENIE DE GUERIN.

Crown 8vo, Price 7s. 6d.

The Edinburgh Review.—“We have never read a more touching record of devoted piety, sisterly affection, and ‘love strong as death.’ Eugénie de Guérin is an Antigone of France sublimed and ennobled by the Christian faith. Her Journal is the outpouring of one of the purest and most saintly minds that ever existed upon earth.”

The British Quarterly Review.—“Perhaps no Journal was ever written so perfectly spontaneous and natural, so unconsciously recording the temper and thought of a just and beautiful life. Rarely is literature enriched or human life elevated by a book so genuine, so pure, and so stimulating.”

The Princeton Review (in noticing the American edition).—“We know of nothing in modern literature more cheering in its simplicity and tender grace than this record of the daily life within and about this old château in Languedoc, and this unconscious picture of the noble and devout maiden which it enshrines.”

CYMBIDIUM HOOKERIANUM.

Dr. Hooker's Cymbidium.

Nat. Ord. ORCHIDÆ.—GYNANDRIA MONANDRIA.

Gen. Char. (Vide supra, TAB. 4884.)

CYMBIDIUM *Hookerianum*; foliis lineari-ligulatis acutis (bipedalibus), vaginis energice striatis, pedunculo porrecto racemoso grandifloro, floribus illos Cymbidii eburnei æquantibus, sepalis petalisque stellatis, oblongis obtuse acutis, petalis paulo angustioribus, labello trifido, laciniis lateralibus basi subsemicordatis, seu æqualibus, antice angulatis, lacinia antica subcordata ovata transversa lobulosa, lineis geminis velutinis a basi disci in basin laciniaë anticæ, labello ceterum hinc illinc subvelutino.—Sepala et petala viridia. Labellum et columna albo-flavida, guttis atropurpureis. *Rchb. fil. in 'Gardeners' Chronicle,' Jan. 6, 1866.*

CYMBIDIUM *Hookerianum*. *Gard. Chron. l. c.*

I have copied from the 'Gardeners' Chronicle' for January 6 of the current year, Professor Reichenbach's account of this very remarkable plant, which was by him gracefully dedicated to Dr. Hooker, "with his best wishes and as a gratulation for the first New Year's Day of his Kew directorship." Mr. Fitch's drawing was taken from a plant that flowered this spring in the establishment of Messrs. Veitch, to whom it was sent many years ago by Mr. Lobb. According to Dr. Hooker, it grows wild in the Sikkim Himalaya, having been gathered there by himself in a district where he happened to meet with Lobb, who no doubt obtained his specimens from the same quarter. These flowered at Exeter not long after their arrival, but—owing probably to their having been kept too warm—many years elapsed before they flowered a second time. This, however, they have at length done, thanks no doubt to their having been placed by Mr. Dominy under cooler treatment. The species is epiphytical and should be grown in a large pot, in which, if properly managed, it presents a very striking appearance.

Dr. Hooker, who, it has been already mentioned, saw the

MAY 1ST, 1866.

plant in its native habitat, is of opinion that it should be regarded rather as a very fine and large variety of *C. giganteum* than as a distinct species. Some such notion had also suggested itself to my own mind, but the question had perhaps better be left in abeyance until we shall have had the opportunity of examining additional specimens. Under any circumstances—*i. e.* whether it be merely a striking variety or a truly distinct species—it will always be worthily associated with Dr. Hooker's name.

DESCR.* *Leaves* one and a half to two feet long, acute, strap-shaped, tough and leathery, dilated at the base, where they are exceedingly striated or streaked with two shades of green, much more so than in the ordinary form of *C. giganteum*. *Scape* about the length of the leaves, erect in its lower portion (where it is covered with loose imbricated scales), but nodding from the point where the flowers are placed. *Flowers* from six to twelve, very large (four to five inches across), of a uniform green, the lip only excepted. *Ovaries* an inch and a half long. *Sepals* and *petals* stellate, oblong, obtusely-acute, the petals slightly narrower than the sepals. *Lip* three-lobed, the lateral lobes long, entire, flat, somewhat falcate and very sharp-pointed in front, bordered with fine hairs, the middle lobe crisp and fringed at the margin; on the disk are two upright ciliated lamellæ, parallel or slightly converging, more than half an inch in length; the whole of the lip is of yellowish-white, changed into deeper yellow at the edges, where it is velvety and decorated with rich reddish-purple spots. *Column* clavate, edged, smooth, green, with a few reddish dots.—*J. B.*

* The following description is mainly drawn up from a flower furnished by Messrs. Veitch, and varies in some respects from that of Professor Reichenbach.

THIBAUDIA CORONARIA.

Small-leaved Thibaudia.

Nat. Ord. VACCINIACEÆ.—DECANDRIA MONOGYNIA.

Gen. Char. (Vide supra, TAB. 4303.)

THIBAUDIA *coronaria*; pubescenti-pilosa, foliis parvis breviter petiolatis ovatis obtusis integerrimis crasse coriaceis enerviis utrinque sparse pilosis, floribus axillaribus solitariis v. binis, pedicellis gracilibus foliis æquilongis, calycis laxè lanuginosi tubo brevi acute 5-gono basi dilatato 5-lobo, lobis 5 triangulari-ovatis acutis, corolla urceolata obtusa 5-gona, lobis brevibus patenti-recurvis late triangularibus, filamentis brevibus dilatatis ciliatis æquilongis, antheris æquilongis loculis brevibus oblongis in tubum duplicem angustum erectum apice 2-porosum attenuatis ecalcaratis.

CERATOSTEMMA *coronaria*. Hort. Lind.

This is another importation of my friend Mr. J. Bateman, whose energy in introducing this beautiful class of plants into Britain has been rewarded by signal success in rearing and flowering them. For a warm greenhouse no plants can be more desirable, the bright green leaves—rarely, if ever, infested by insects—are always beautiful, and the flowers, which are produced in profusion, remain in beauty longer than those of any other ornamental plants of the same nature. How little known these Andean Vacciniaceous plants are may be gathered from the fact that this is the third figured in this magazine within five months, all new to cultivation and two likewise to science.

T. coronaria has been cultivated by Mr. Bateman under the name of *Ceratostemma*, by which it was sold by M. Linden, of Brussels, but I have no other information regarding it beyond that it flowered with Mr. Bateman in January of the present year. It is probably a native of New Granada or Venezuela. It differs generically from *Ceratostemma* in the filaments not being connate into a tube, and is perhaps referable to

Klotzsch's genus *Themistoclesia* (Linnaea, xxiv. 41), which, however, has a half-globose calyx. As many of that author's genera will certainly fall into *Thibaudia* on a revision of the Order, it appears to me safe to regard the present plant as a *Thibaudia* too.

DESCR. A small, much-branched, rigid shrub. *Branches* stout, pale-green, and—as well as the leaves, peduncles, and calyces—covered with distant, lax, soft, spreading hairs. *Leaves* numerous, spreading and deflexed, half an inch long, ovate, obtuse, quite entire, often glabrescent above, which is deep shining-green, beneath pale; *midrib* and *nerve* none on either surface; *petiole* very short. *Pedicels* axillary, solitary or two together, as long as the leaves, woolly. *Flowers* nodding or drooping, nearly an inch long. *Calyx* short, almost square in outline, pale-green, the base dilated and five-lobed, sides acutely five-angled or rather with five deep depressions; *lobes* broadly triangular, acute. *Corolla* narrow-urceolate or tubular and inflated below, obscurely five-angled, with five short spreading and recurved lobes, dark-red and shining, quite glabrous. *Filaments* very short, free, oblong, margins ciliated. *Anthers* oblong, incurved, a little longer than the filaments, with a very long, straight, slender, double tube, opening by two oblong pores. *Style* slender, exserted; *stigma* minute. *Ovary* five-celled, many-ovuled. *J. D. II.*

Fig. 1. Flower. 2. Calyx. 3 and 4. Stamens :—*all magnified.*

MICROCACHRYS TETRAGONA.

Strawberry-fruited Cypress.

Nat. Ord. CONIFERÆ.—DICECIA MONANDRIA.

Gen. Char. Dioicum. *Ament. masc.* terminalia, solitaria, sessilia, ovoidea. *Antheræ* imbricatæ, 2-loculares, loculis globosis; *pollen* 3-gonum. *Ament. fem.* terminalia, solitaria, sessilia, subglobosa. *Squamæ* patentés, arcte imbricatæ, carnosæ, rubræ, late ovato-rhomboidæ, concavæ, incurvæ. *Ovulum* solitarium, deorsum spectans, integumento exteriori abbreviato. *Strobilus* decurvus, ovoideus. *Semina* immatura dorso compressa, integumento exteriori basi cincta.—*Frutex prostratus, ramosus*; ramis 4-gonis. *Folia triangulari-ovata, arcte imbricata, obtusa, ciliolata.* *Amenta parva.*

MICROCACHRYS *tetragona*.

MICROCACHRYS *tetragona*. *Hook. f. in Lond. Journ. Bot. v. 4. p. 150, et in Flor. Tasman. v. 1. p. 358. t. C. B.*

ARTHROTAXIS (?) *tetragona*. *Hook. Ic. Pl. t. 560.*

This is surely one of the most remarkable of Conifers, and is in other respects one of the most interesting, being extremely rare in its native country, and presenting the unique character in the Order of bearing a fleshy brilliantly-coloured cone. It is true that we have in the Yew, and in various species of *Podocarpus*, etc., fleshy highly-coloured fruits, but a Conifer with the scales themselves of the young cones assuming a pulpy texture, semitransparent consistence, and bright colour, is, as far as I know, unique in the Order; whether these characters persist in the ripe fruit I am unable to say.

Microcachrys tetragona inhabits the tops of a very few mountains of Tasmania, viz. the Western range and Mount Lapeyrouse, where it forms low straggling bushes. The plant here figured was brought to Kew by my friend W. Archer, Esq., F.L.S., of Cheshunt, on whose property it grew, and was by him presented to the Royal Gardens, where it produced its female cones abundantly in 1862; but having no male plant wherewith to fertilize it, no seeds were obtained.

DESCR. A low, rambling bush, with tough, straggling, four-angled branches and branchlets, clothed with evergreen, appressed imbricate leaves. *Leaves* one-tenth to one-sixth of an inch long, ovato-rhomboid, obtuse, ciliolate, convex at the back, obscurely keeled when dry. *Male cones* terminal, small, oblong or ovoid, one-eighth of an inch long, of twenty to thirty anthers, each consisting of a triangular scarious scale, having at its base two cells, opening by transverse slits. *Female cones* also terminal, ovoid or globular, one-fourth to one-third of an inch long, bright red, translucent. *Scales* thick and fleshy, with one naked ovule at their base. *J. D. H.*

Fig. 1. Leaf. 2. Young female cone. 3. Scale and ovule of ditto. 4. Ripe female cone. 5. Scale and ovule of ditto. 6. Branch of male cones. 7. Male cone. 8. Anther:—*all but fig. 6 magnified.*

Nat. Ord. IRIDEÆ.—TRIANDRIA TRIGYNIA.

Gen. Char. (Vide supra, TAB. 5298.)

IRIS *reticulata*; foliis angustis strictis erectis linearibus acutis obtuse 4-gonis cavis glaucis, perianthii segmentis exterioribus angustis cuneiformi-oblongis patentibus imberbibus, interioribus longioribus æquilongisve erectis elongatis lanceolatis anguste spathulatis, ovario obtuse 3-gono, stigmatibus oblongis, labio superiore 2-lobo recurvo serrato, inferiore brevissimo.

IRIS *reticulata*. Bieberstein, *Fl. Taur. Cauc. v. 1. p. 34.* *Cent. Plant. Rar. Ross. v. 1. t. 11.* Sweet, *British Fl. Garden, ser. 2. v. 2. t. 189.* *Journ. Hort. Soc. v. 3. p. 166.*

Though far from the largest or most gorgeous, this is really one of the most beautiful species of *Iris* in cultivation; nothing can exceed the deep rich violet of its perianth-lobes and stigmata, or the delicious fragrance of violet it exhales, whilst the leaves are of a less coarse appearance and texture than is usual in the genus. The Royal Gardens are indebted for the plants here figured to Colonel Scott, R.E., who procured them through his friend Captain Smith, R.E., a gentleman employed in the telegraph department in Persia; they flowered in a cool greenhouse in March of the present year. The plant is a native of Georgia, Asia Minor, Kurdistan, Syria, and Persia, and is extremely well deserving of cultivation as a spring flower of easy culture.

DESCR. *Root* a solitary tuber, coated with a firm network of fibres. *Leaves* one foot high, striate, erect, glaucous, obtusely four-angled, slightly twisted, with a sharp apex; *Sheaths* with white scarious edges, closely appressed to the bases of the leaves and flower-stems. *Flowers* three to four inches in diameter, solitary, erect, deep-violet in hue and fragrance. *Perianth* with the tube one inch long, slender:

outer segments spreading, oblong-cuneiform, with a stout green midrib, *blade* dark-purple, with deeper veins and brilliant orange blotches towards the base; *inner* suberect, narrow spatulate, as long as the outer, obtuse, slightly waved, all purple. *Ovary* obtusely trigonous. *Stigma* pale-purple; *upper segment* reflexed, serrate, two-lobed; *lower* almost obsolete. *J. D. H.*

CEROPEGIA SORORIA.

Kaffrarian Ceropogia.

Nat. Ord. ASCLEPIADEÆ.—PENTANDRIA MONOGYNIA.

Gen. Char. (Vide supra, TAB. 5306.)

CEROPEGIA *sororia*; volubilis, glabra, caule tenui, foliis anguste linearibus utrinque acutis internodiis longioribus, pedunculis axillaribus unifloris elongatis, sepalis lineari-subulatis, corollæ tubo glabro elongato, parte inferiore inflata elongata oblonga, parte superiore inferiore æquilonga cylindrica, lobis partem superiorem tubi æquantibus pendulis lineari-oblongis acutis ciliatis, coronæ stamineæ lobis exterioribus subulatis longe ciliatis, interioribus elongatis glabris.

CEROPEGIA *sororia*. *Harvey, mss.*

In the eighty-ninth volume of this work a very remarkable South African species of this genus is figured,—*C. Bowkeri*, Tab. 5407,—partaking very much of the character of this in the singular pendulous lobes of the corolla, which move with the faintest breeze, and probably are intimately connected with the function of impregnation, though how does not appear. Like many South African plants, it has large tuberous roots, though I cannot say whether, like its above-named congener, it is erect in its native country and becomes a twiner in our damper climate, having no indigenous specimen at hand to judge from. The specimen here figured was flowered by Dr. Moore, of Glasnevin, in May, 1865, from seeds sent by Mrs. F. W. Barber, from Kaffraria, and named by Dr. Harvey, who is engaged in working up the *Asclepiadææ* for the Cape Flora. Its name, *sororia* (*sisterly*), alludes to its kinship with *C. Bowkeri*, Miss Bowker (now Mrs. Barber) having sent both species to Dr. Harvey. It has also been found by Zeyher in the Albany district.

DESCR. A slender, glabrous, rather glaucous, branching climber, with almost filiform stems and branches and long internodes. *Leaves* four to seven inches long, very narrow,

linear-lanceolate, not half an inch broad, dark-green above, glaucous beneath. *Peduncles* axillary, solitary, about as long as the internodes, one-flowered. *Flowers* an inch and a half to two inches long, pale-green, the reflexed lobes of the corolla darker green, with a double row of transverse purple bars above, pink beneath. *Calyx-lobes* linear-subulate, not half the length of the swollen base of the corolla; *tube of the corolla* consisting of a narrow inflated lower and cylindrical upper portion of equal length, glabrous; *lobes* as long as the upper portion, linear-oblong, acute, villous and ciliated, keeled down the middle with reflexed sides. *J. D. II.*

Fig. 1. Calyx and crown of anthers, etc. 2. Pollen-masses:—*both magnified.*

J. B. BROWN & CO.'S NEW PATENT B B LAWN MOWER.

Manufactured
by
J. B. Brown & Co.,
148,
Upper Thames
Street,
London.

Guaranteed to
give perfect
satisfaction, and
if not approved of
may be at once
returned.

J. B. BROWN and Co., having so very successfully introduced, at the recent Meeting of the Bath and West of England Society at Hereford, in June 1865, the NEW PATENT B B LAWN MOWER, of their own manufacture, beg to mention that having supplied the large number of MACHINES ordered on that occasion, and up to the present time, with most unqualified satisfaction to every one, so far as they are aware, they are now actively preparing to execute further orders for the approaching season; and, owing to the large number of such orders already received, they would very respectfully solicit all intending orders to be sent with as little delay as possible,—say to be executed at any time during the opening of the spring, or in the course of the summer, as may be desired.

PRICES—including Carriage to any Railway Station or Shipping Port in England.

J. B. BROWN & CO.: OFFICES, 18, CANNON STEET, CITY, LONDON, E.C.

(Nearly opposite St. Swithin's Lane and "London Stone," and near London Bridge.)

WAREHOUSE (where Stock is kept), 148, UPPER THAMES STREET, E.C.

(Opposite the City of London Brewery, and close to the London Bridge Steamboat Piers.)

HEATING BY HOT WATER.

It is now generally admitted that Buildings of any kind can be more effectually warmed by Hot Water than by any other means; but as so much depends on the way in which the Apparatus is fixed, it is of the greatest importance that it be done by experienced men.

J. JONES & SONS are prepared to estimate for Warming, to any extent—

GREENHOUSES.
CONSERVATORIES.
VINERIES.
HOTHOUSES.
FORCING PITS.
PEACH HOUSES.
PINE STOVES.
ORCHARD HOUSES.

CHURCHES.
CHAPELS.
SCHOOLS.
READING ROOMS.
LECTURE ROOMS.
BILLIARD ROOMS.
HALLS AND PASSAGES.
BATHS.

FACTORIES.
OFFICES.
WORKSHOPS.
WAREHOUSES.
DRYING ROOMS.
CELLARS.
COACH-HOUSES.
HARNESS ROOMS.

J. JONES & SONS' Apparatus is simple in construction, moderate in cost, and economical in working.

It is equally available for the Amateur's Greenhouse, or the longest range Forcing Houses; for the smallest Chapel or the largest Church; for Private Offices or those of Public Companies.

It is admirably adapted for Dwelling Houses, as coils of pipes can be placed in any part, for warming the various rooms. One or more Baths may be heated from the same boiler, and a constant supply of hot water obtained in any part of the house.

For Warehouses and Workshops this system of heating is unsurpassed, as not only the means of keeping goods dry, but it also adds to the comfort of workpeople, and thereby effects a saving in labour.

J. JONES & SONS recommend boilers of all kinds being set in brickwork, if possible; but portable boilers can be supplied, if required.

MATERIALS.—All Materials supplied will be of the best quality.

DELIVERY.—Boilers of various kinds, and pipes and connections, being always in stock, can, at a very short notice, be sent to any part.

FIXING.—The Fixing will be done by experienced men, fully capable of finishing properly any work they may undertake; and J. JONES & SONS are prepared to guarantee the effectual working of any apparatus fixed by their own men.

ESTIMATES.—Plans and Estimates will be sent on application.

CURTIS'S
BOTANICAL MAGAZINE,

COMPRISING

THE PLANTS OF THE ROYAL GARDENS OF KEW,
AND OF OTHER BOTANICAL ESTABLISHMENTS IN GREAT BRITAIN,
WITH SUITABLE DESCRIPTIONS;

BY

JOSEPH DALTON HOOKER, M.D., F.R.S. L.S. & G.S.,

Director of the Royal Botanic Gardens of Kew.

~~~~~  
Nature and Art to adorn the page combine,  
And flowers exotic grace our northern clime.  
~~~~~

LONDON:

LOVELL REEVE & CO., 5, HENRIETTA STREET, COVENT GARDEN.

1866.

THE HYDROPULT,

AN INVENTION FOR THROWING WATER BY HAND-POWER.

(SECURED BY ROYAL LETTERS PATENT.)

Weights but 8 lbs.

Will throw 7 or 8 Gallons of Water per minute 50 feet, when worked by the power of one Man.

PRICE LIST.

Complete with Brass Cylinders and Japanned Stirrup, £1. 12s. 6d.

Complete with Brass Cylinders and Copper Stirrup, £2. 2s.

The price, "complete" as above, includes 2½ feet Suction, and 3 feet Delivery Hose, Galvanized Wire Strainer, Rose, and Small Jet.

THE HYDROPULT

Is invaluable for use in the Garden for

WATERING BEDS,
SPRINKLING PLANTS,
DROWNING OUT INSECTS,
CLEANSING TREES FROM SMUTS,
DRESSING WITH LIQUID MANURE, ETC. ETC.

THE HYDROPULT

Is desirable in every Household for

WASHING WINDOWS.
WETTING SIDE WALKS,
SPRINKLING STREETS,
WASHING CARRIAGES,
EMPTYING CISTERNS,
FILLING BARRELS,
A SPRAY BATH, ETC. ETC.

ORDERED BY THE WAR DEPARTMENT AS FIRE ENGINES.

ROBERT HOGG, LL.D. & F.L.S., REV. H. DOMBRAIN, A.B., SHIRLEY HIBBERT ESQ., F.R.H.S., THOMAS RIVERS, ESQ. (the eminent Florist), and other well-known gentlemen, recommend the Hydropult as an Invaluable Garden Implement.

The Hydropult will draw water horizontally, if necessary, through Two Hundred Feet Suction Hose, and force it through Delivery Hose to an altitude of One Hundred Feet.

THE GREENHOUSE AND CONSERVATORY HYDROPULT.

A NEW AND BEAUTIFUL IMPLEMENT,

Weighing scarcely 5 lbs.

And specially adapted for use in the Greenhouse and Conservatory.

Price 35s.

Complete, with Brass Cylinders and Copper Stirrup, 2½ feet Suction and 3 feet Delivery Hose, Strainer, Rose and Fan.

This New Implement must necessarily supersede Syringes and other devices of the kind, for it will be found much more effective in its operation.

A LADY CAN WORK IT FOR HOURS WITHOUT FATIGUE.

CAUTION.—Important to the Public.—The extensive sale of the Hydropult has excited the cupidity of so-called respectable, but in reality unprincipled Manufacturers, who are now palming on the Public worthless imitations of the Hydropult, and through their connections are enabled to place said devices on exhibition, and for sale, in many of the principal Ironmongery and Seed Establishments throughout the City and provinces. These devices resemble in many respects the Hydropult in appearance, and are calculated to deceive the unsuspecting. The Proprietor therefore, issues this Caution, and respectfully intimates that parties wishing to purchase the Hydropult should examine the machine offered for sale, and see if it has attached thereto a label, with the following words:—"The Hydropult, Vose's Patent, manufactured only by GRIFFITHS & BROWITT, Birmingham. CHARLES POMEROY BUTTON Proprietor, & and 143, Cheapside, London." Unless this label is attached, the machine is not the Hydropult.

PROSPECTUSES, WITH TESTIMONIALS, ON APPLICATION.

HYDROPULT SHOW-ROOM, 142 & 143, CHEAPSIDE, LONDON.

CHARLES POMEROY BUTTON, PROPRIETOR.

BOTANICAL MAGAZINE ADVERTISER.

SHANKS' PATENT LAWN MOWERS FOR 1866.

Patronized on Five separate occasions, during the Season of 1864, by

HER MAJESTY THE QUEEN,

AND ONCE BY HIS MAJESTY THE KING OF SAXONY;

AGAIN ON FOUR SEPARATE OCCASIONS DURING THE SEASON OF 1865 BY HER MAJESTY THE QUEEN;

ONCE BY HIS MAJESTY THE KING OF HOLLAND;

AND ONCE BY HIS MAJESTY THE KING OF PRUSSIA.

HORSE MACHINE.

PONY MACHINE.

HAND MACHINE.

ALEXANDER SHANKS & SON, in presenting their LAWN MOWERS for the approaching Season, are gratified to be able to state that the demand for their celebrated Machines is rapidly increasing.

A. S. & SON, in introducing Improvements into their Machines, have been careful that no Improvement be introduced which has merely novelty to recommend it, but that the advantages in point of durability and simplicity of construction, which have always been a peculiarity of their Machines, should still remain.

A. S. & SON can confidently assure their numerous Friends and Customers and the Public generally that their endeavour will always be to supply a Machine, first-class in every way, one which cannot be surpassed if even equalled, whether for simplicity of construction, ease in working, or durability. None but the best materials and skilled workmen are employed in the manufacture of their Machines.

PRICES—Including Carriage to most of the principal Railway Stations and Shipping Ports in the Kingdom.

SHANKS' NEW PATENT HAND MACHINE FOR 1866.

10-inch Machine.....£3 10 0	} Easily worked by a Lady. Do. by a Boy. Do. by a Man.	19-inch Machine.....£7 12 6	} Do. by a Man and a Boy. Do. by Two Men.

48-inch Machine..... 28 0 040s. extra.

Silent Movement, 20s. extra; Boots for Horse's Feet, 24s. per Set.

SHANKS' PATENT LAWN MOWERS cut the Grass on uneven as well as on level Lawns; and it is quite immaterial whether the Grass be wet or dry.

Every Machine warranted to give ample satisfaction, and if not approved of, can be at once returned.

ALEXANDER SHANKS & SON,
27, LEADENHALL STREET, LONDON.
MANUFACTORY, DENS IRONWORKS, ARBROATH.

A. S. and SON keep a Stock of Lawn Mowers at 27, Leadenhall Street, London, from which Orders can be at once executed. They also have at their London Warehouse a staff of experienced Workmen thoroughly acquainted with all the details of these Machines, so that they are enabled to repair Lawn Mowers in London as well as at the Manufactory.

GREEN'S PATENT SILENS MESSOR

OR

NOISELESS LAWN MOWING, ROLLING AND COLLECTING MACHINES.
 FITTED WITH PATENT SELF-SHARPENING CYLINDER CUTTERS.

By Special Appointment
 Sole Manufacturer

To Her Most Gracious
 Majesty the Queen.

Every Machine is warranted to give entire satisfaction, and if not approved of can be returned unconditionally.

Green's Patent Lawn Mowers have proved to be the best, and have been carried off every year that has been given in all cases of competition.

PRICES OF HAND MACHINES.

To cut 10 inches ...	£3 10 0	Suitable for a Lady	To cut 18 inches ...	£7 10 0	Suitable for one person
" 12 "	4 10 0	" "	" 20 "	8 0 0	Suitable for two persons
" 14 "	5 10 0	Suitable for one person	" 22 "	8 10 0	" "
" 16 "	6 10 0	" "	" 24 "	9 0 0	" "

Prices of Horse, Pony, and Donkey Machines, including patent self-delivery box; cross stay complete; suitable for attaching to ordinary chaise-traces or gig harness.

To cut 26 inches ...	£13 0 0	Leather Boots for Donkey, 18s.	To cut 30 inches ...	£21 0 0	Leather Boots for Pony, 22s.
" 28 "	15 0 0		" 36 "	24 0 0	
" 30 "	17 0 0		" 42 "	27 0 0	
		" 48 "	30 0 0		

The 26, 28, and 30 inches can easily be worked by a donkey, or by two men, on an even lawn, the 30 and 42 inches by a pony, and 42 and 48 inches by a carriage horse; and, as the Machines make no noise in working, most spirited animal can be employed without fear of its running away, or in any way damaging the Machine.

Both the Horse, Pony, Donkey, and Hand Machines possess (over all other Makers) the advantages of self-sharpening: the cutters being steel on each side, when they become dull or blunt by running one way round the cylinder, can be reversed again and again, bringing the opposite edge of the cutter against the bottom blade, when the Machine will cut equal to new. Arrangements are made that the cylinder can be reversed, by any unexperienced person, in two or three minutes.

The above Machines are made from the best materials, and of superior workmanship; are delivered Carriage Free to all the principal Railway Stations and Shipping Ports in England.

PRIMULA, CALCEOLARIA, ETC.

WM. CUTBUSH AND SON are now sending out Seed of their superb PRIMULA SINENSIS FIMBRIATA, which has for many years given great satisfaction.

The 'Gardeners' Chronicle' of the 6th of January, in Notices to Correspondents, says:—
"The blooms sent are remarkably fine, richly coloured, full, and densely fringed; they are evidently the produce of a capital strain."

The 'Journal of Horticulture' of the 23rd of January, says that "The finest and richest coloured Chinese Primulas we have yet seen are those raised by Messrs. Cutbush and Son."

Sealed packets, 2s. 6d. and 3s. 6d. each.

CALCEOLARIA (JAMES'S).—This is the finest herbaceous variety extant. Per packet, 2s. 6d. and 3s. 6d. each.

CINERARIA, from finest named varieties. Per packet 2s. 6d. and 3s. 6d. each.

WHOLESALE AT THE

"CITY SOAP WORKS," MILTON STREET, LONDON, E.C.

DESTROY YOUR INSECT PESTS.

You may easily destroy all Plant Pests, Red Spider, Mealy Bug, Thrip, Green and Black Fly, American Blight, Ants, Scale, Mildew, Without injury to the most delicate Plant or Tree, by using

FOWLER'S GARDENERS' INSECTICIDE,

Pronounced by all who have used it to be far superior to any other remedy.

One trial will prove its efficacy. Testimonials forwarded on application.

Price 1s. 6d., 3s., 5s. 6d., and 10s. per Tin. Orders amounting to 18s., Carriage Paid.—AGENTS REQUIRED.

Mr. George Parsons, of the Keimer, Hassock's Gate, and Brighton Nurseries, says:—"It is certainly the most effectual remedy that has at any time come under my notice—destroys every insect for which I have applied it, without the least injury to the most delicate plant."

Mr. Spary, F.R.H.S., of the Queen's Graperies, Brighton, says:—"I have had an opportunity of proving its efficacy, it having been applied to all plants affected with Green and Black Aphis, Scale, Red Spider, Thrip, etc., under my personal superintendence; the result has been satisfactory, without injury to the plants, and proved destructive to the insects."

Messrs. Wm. Wood and Son, Woodlands Nursery and Seed Warehouse, Maresfield, near Uckfield, Sussex, say:—"We have tried it on Roses affected with Mildew, Calceolarias covered with Green Fly, and Aucubas and Oleanders infested with Scale; and we have much pleasure in stating the plants are now perfectly clean and healthy."

Mr. George Quelch, Florist, Lewes Road, Brighton, says:—"It will give perfect freedom from insects, and in many instances more healthy verdure of foliage. It will prove one of the most welcome and lasting friends."

Mr. J. Cruttenden, of the Rose Hill Nurseries, Brighton, says he is "perfectly satisfied with the result: it will not only kill the insects, but will do so without in any way injuring the plants."

THOMAS WRIGHT.
LORD WROTTESELEY.
F. W. FAIRHOLT.
RICHARD ANSDALL, A.R.A.

 *Continued in Monthly Numbers, each containing 3 Portraits, with Memoirs, 2s. 6d.*

The Number for June contains Portraits and Memoirs of CHARLES DARWIN, M.A., and Dr. BERTHOLD SEEMANN, F.L.S.

"It seems the intention of the editor to introduce a representative of Literature, Science, and Art, respectively, in each number; an excellent plan, if only for the sake of variety. The photographs as likenesses are all capital. The biographical notices are well written, sufficiently ample for the purpose, and penned in a kindly yet independent spirit; the public life of the individual is the principal point the author has desired to set before his readers in the narrative accompanying each picture. This work, if carried on to any extent, as we trust it may be, will form a valuable book of contemporary illustrated biography."—*Art Journal*.

"The biographical memoirs, so far as we have seen them, are concise and correct."—*Athenaeum*.

"The idea of combining these pictures in little of the Men of the Time with authentic biographies of them, is a very happy one, and is very successfully carried out in the work before us."—*Notes and Queries*.

London: ALFRED W. BENNETT, 5 Bishopsgate Without, E. C.

*"An Argosy doth ride our roaring Strand,
Spicing the wind, and freighted with the spoils
Of all the Orient."* OLD PLAY

THE ARGOSY

Sixpence Monthly, Illustrated.

THE *First Volume of this new Magazine, which bears somewhat the same relation to other Magazines that the pleasure yacht bears to other ships, will be ready in a few days, in neat cloth, price 4s. 6d.*

It will contain the **First Half of**

THE AERIAL CHAIR.

A wonderful application of the principle of oscillation. Entirely "*self-acting*," the operator requiring no assistance whatever.

CHARLES POMEROY BUTTON, Patentee, Nos. 142 and 143, Cheapside, London

WORKS ON BOTANY.

- BENTHAM'S ILLUSTRATED BRITISH FLORA**; a Description (with a Wood-Engraving, including dissections, of each species) of the Flowering Plants and Ferns indigenous to, or naturalized in, the British Isles. 2 vols. 8vo. 1295 Wood-Engravings, from Original Drawings by W. FITCH. £3. 10s.
- BENTHAM'S HANDBOOK of the BRITISH FLORA**; a Description of the Flowering Plants and Ferns indigenous to, or naturalized in, the British Isles. For the Use of Beginners and Amateurs. 12s.
- MOORE'S FIELD BOTANIST'S COMPANION**; a Familiar Account, in the Four Seasons, of the most common of the Wild Flowering Plants of the British Isles. 24 Coloured Plates, by W. FITCH. 21s.
- BENTHAM'S OUTLINES of ELEMENTARY BOTANY**, as Introductory to Local Floras. 2s. 6d.
- HOOKER'S FLORA of NEW ZEALAND**; a Systematic Description of the Native Plants of New Zealand, and the Chatham, Kermadec's, Lord Auckland's, Campbell's, and Macquarrie's Islands. Part I. 16s. Published under the auspices of the Government of that colony. [Part II in the Press.
- BENTHAM'S FLORA AUSTRALIENSIS**; a Description of the Plants of the Australian Territory. Vols. I. and II., 20s. each. Published under the auspices of the several Governments of Australia. [Vol. III. nearly ready.
- GRISEBACH'S FLORA of the BRITISH WEST INDIAN ISLANDS**. 37s. 6d. Published under the auspices of the Secretary of State for the Colonies.
- BENTHAM'S FLORA HONGKONGENSIS**; a Description of the Flowering Plants and Ferns of the Island of Hongkong. With a Map of the Island. 16s. Published under the authority of Her Majesty's Secretary of State for the Colonies.
- HOOKER'S FLORA of TASMANIA**; Royal 4to, 2 vols. 200 Coloured Plates. £17. 10s. Published under the authority of the Lords Commissioners of the Admiralty.
- HOOKER on the FLORA of AUSTRALIA**, its Origin, Affinities, and Distribution. 10s.
- HOOKER'S RHODODENDRONS of SIKKIM-HIMALAYA**; being an account, Botanical and Geographical, of the Rhododendrons recently discovered in the Mountains of Eastern Himalaya, from Drawings and Descriptions made on the spot, by Dr. J. D. HOOKER, F.R.S. Folio, 30 Coloured Plates. £3. 16s.
- MOGGRIDGE'S FLORA of MENTONE**. Royal 8vo. Parts I. and II., each, 25 Coloured Plates, 15s.
- WOOD'S TOURIST'S FLORA**; a Descriptive Catalogue of the Flowering Plants and Ferns of the British Islands, France, Germany, Switzerland, Italy, and the Italian Islands. 18s.
- HOOKER'S BRITISH FERNS**; Figures and Descriptions, with Analyses of the Fructification and Venation, of the Ferns of Great Britain and Ireland, systematically arranged. Royal 8vo, 66 Coloured Plates, £2. 2s.
- HOOKER'S GARDEN FERNS**; Figures and Descriptions, with Analyses of the Fructification and Venation, of a Selection of Exotic Ferns, adapted for Cultivation in the Garden, Hothouse and Conservatory. Royal 8vo, 64 Coloured Plates, £2. 2s.
- HOOKER'S FILICES EXOTICÆ**; Figures and Descriptions of Exotic Ferns, chiefly of such as are cultivated in the Royal Gardens of Kew. Royal 4to, 100 Coloured Plates, £6. 11s.
- CHANTER'S FERNY COMBES**; a Ramble after Ferns in the Glens and Valleys of Devonshire. Second Edition. 8 Coloured Plates and a Map of the County, 5s.
- BERKELEY'S BRITISH MOSSES**, containing all that are known to be Natives of the British Isles. 24 Coloured Plates, 21s.
- BERKELEY'S BRITISH FUNGOLOGY**, containing Characters of above a Thousand Species of Fungi, and a Complete List of all that have been described as Natives of the British Isles. 24 Coloured Plates, 30s.
- BADHAM'S ESCULENT FUNGUSES of ENGLAND**, containing an Account of their Classical History, Uses, Characters, Development, Structure, Nutritious Properties, Modes of Cooking and Preserving, etc. New Edition. Edited by F. CURREY, F.R.S. 12 Coloured Plates, 12s.
- HUSSEY'S BRITISH MYCOLOGY**, comprising Figures and Descriptions of the Funguses of interest and novelty indigenous to Britain. Royal 4to. First Series, 90 Coloured Plates, £7. 12s. 6d.; Second Series, 50 Coloured Plates, £4. 10s.
- HARVEY'S PHYCOLOGIA BRITANNICA**; or, History of British Seaweeds, containing Coloured Figures, Generic and Specific Characters, Synonyms and Descriptions of all the Species of Algæ inhabiting the Shores of the British Islands. Royal 8vo, 4 vols., 360 Coloured Plates, £6. 6s.
- HARVEY'S SYNOPSIS of BRITISH SEAWEEDS**. 5s.
- HARVEY'S PHYCOLOGIA AUSTRALICA**; a History of Australian Seaweeds, comprising Coloured Figures and Descriptions of the more characteristic Marine Algæ of the South Hemisphere. Royal 8vo, 5 vols., 300 Coloured Plates, £7. 13s.
- HARVEY'S NEREIS AUSTRALIS**; or, Algæ of the Southern Ocean. Imperial 8vo, 50 Coloured Plates, £2. 2s.

JUST PUBLISHED.

*In Demy and Imperial 8vo, to range with the Editions of the 'BIRDS,'
'QUADRUPEDS,' 'ÆSOP,' and 'SELECT FABLES,' pp. xxiv., 562,*

THE BEWICK COLLECTOR.

A DESCRIPTIVE CATALOGUE

OF THE WORKS OF

THOMAS AND JOHN BEWICK;

INCLUDING CUTS, IN VARIOUS STATES, FOR

BOOKS AND PAMPHLETS,

PRIVATE GENTLEMEN, PUBLIC COMPANIES,

EXHIBITIONS, RACES, NEWSPAPERS,

SHOP CARDS, INVOICE HEADS, BAR BILLS,

COAL CERTIFICATES, BROADSIDES,

AND OTHER MISCELLANEOUS PURPOSES,

AND

WOOD BLOCKS.

With an Appendix of Portraits, Autographs, Works of Pupils, &c. &c.

The whole described from the Originals

CONTAINED IN THE LARGEST AND MOST PERFECT COLLECTION
EVER FORMED,

AND ILLUSTRATED WITH A HUNDRED AND TWELVE CUTS

FROM BEWICK'S OWN BLOCKS.

BY

THOMAS HUGO, M.A., F.R.S.L., F.S.A., &c.,

*Honorary Fellow and Honorary Member of various Literary and Archæological Societies,
Rector of All Saints, Bishopsgate,
and Chaplain to the Honourable Artillery Company;*

THE POSSESSOR OF THE COLLECTION.

*Demy 8vo, 21s. Imperial 8vo (limited to 100 copies) with a fine
Steel Portrait of Thomas Bewick, £2. 2s.*

LOVELL REEVE & CO., 5, HENRIETTA STREET, COVENT GARDEN.

Just published, post 4to, pp. 620, cloth, gilt top, 42s.,

WHITNEY'S CHOICE OF EMBLEMES; a Facsimile Reprint, including 72
trative Plates, by Photo-Lithography. Edited by HENRY GREEN, M.A. With an Introduct-
sertation, Essays Literary and Bibliographical, and Explanatory Notes. Less than 100 copies remain for d-
the negatives have been destroyed.

LOVELL REEVE AND CO., 5, HENRIETTA STREET, COVENT GARDEN.

JUST PUBLISHED.

BOTANICAL MAGAZINE. Coloured Illustrations and Descriptions of the new and rare Flowering Plants of the Royal Gardens, Kew, and of other Botanical Establishments. By Dr. HOOKER, F.R.S., Director of the Royal Gardens, Kew. Monthly, with 6 Coloured Plates. 3s. 6d.

Contents of No. 258, June 1866.

EULOPHIA VIRENS.
SCILLA COOPERI.
CUPRESSUS LAWSONIANA.

WARSCWICELLA IONOLEUCA.
BEGONIA GERANIOIDES.
MYRSIPHYLLUM ASPARAGOIDES.

FLORAL MAGAZINE; containing Figures and Descriptions of the newest varieties of Popular Garden Flowers. By the Rev. H. HONYWOOD DOMBRAIN. Monthly, with 4 coloured Plates by ANDREWS, 2s. 6d.

Contents of No. 74, June 1866.

TROPÆOLUMS, BEAUTY AND ATTRACTION.
ODONTOGLOSSUM CERVANTESII.

CAMELLIA, NONPAREIL.
KERRIA JAPONICA VARIEGATA.

ILLUSTRATED HANDBOOK OF THE BRITISH FLORA; a Description (with a Wood-Engraving, including dissections, of each species) of the Flowering Plants and Ferns indigenous to, or naturalized in, the British Isles. By GEORGE BENTHAM, F.R.S., President of the Linnean Society. Demy 8vo, 2 vols., 1295 Wood-Engravings, £3. 10s.

FLORA VITIENSIS; a Description of the Plants of the Viti or Fiji Islands, with an Account of their History, Uses, and Properties. By Dr. BERTHOLD SEEMANN, F.L.S. Royal 4to, Part IV., 10 Coloured Plates, 15s. To be completed in Ten Parts.

BRITISH BEETLES; a Familiar Introduction to the study of our Native COLEOPTERA. By E. C. RYE. Crown 8vo, 16 Coloured Steel Plates, engraved from natural specimens expressly for the work by E. W. Robinson, comprising figures of nearly 100 species, and 11 Wood-Engravings of Dissections by the Author, 10s. 6d.

LOVELL REEVE & CO., 5, HENRIETTA STREET, COVENT GARDEN.

EUGÉNIE DE GUÉRIN.

I.

Shortly will be published,

THE LETTERS OF EUGENIE DE GUERIN.

Crown 8vo, Price 7s. 6d.

MATTHEW ARNOLD, in his recently published Essays, says,—“At least one good book has appeared in 1865—THE LETTERS OF EUGÉNIE DE GUÉRIN.”

II.

Now ready, a Second Edition,

THE JOURNAL OF EUGENIE DE GUERIN.

Crown 8vo, Price 7s. 6d.

The Edinburgh Review.—“We have never read a more touching record of devoted piety, sisterly affection, and ‘love strong as death.’ Eugénie de Guérin is an Antigone of France sublimed and ennobled by the Christian faith. Her Journal is the outpouring of one of the purest and most saintly minds that ever existed upon earth.”

The British Quarterly Review.—“Perhaps no Journal was ever written so perfectly spontaneous and natural, so unconsciously recording the temper and thought of a just and beautiful life. Rarely is literature enriched or human life elevated by a book so genuine, so pure, and so stimulating.”

The Princeton Review (in noticing the American edition).—“We know of nothing in modern literature more cheering in its simplicity and tender grace than this record of the daily life within and about this old château in Languedoc, and this unconscious picture of the noble and devout maiden which it enshrines.”

LONDON: SIMPKIN, MARSHALL, & CO., STATIONERS' HALL COURT.

NEW WORKS ON ORCHIDS.

Part II., Royal 4to, Ten Coloured Plates, 10s. 6d.,

SECOND CENTURY OF ORCHIDACEOUS PLANTS,

Selected from the subjects published in 'Curtis's Botanical Magazine' since the issue of 'First Century.'

EDITED BY JAMES BATEMAN, Esq., F.R.S. & L.S.,

Author of 'A Monograph of *Odontoglossum*,' 'The Orchidaceæ of Mexico and Guatemala,' etc.

To be completed in Ten Parts.

Contents of Part II.

CYPRIPEDIUM LÆVIGATUM.
DENDROBIUM BARBATULUM.
EPISTEPHIUM WILLIAMSII.
CÆLOGYNE FUSCESCENS, VAR. BRUNNEA.
DENDROBIUM XANTHOPHLEBIUM.

With the assistance of MM. G. LUDDEMAN, J. E. PLANCHON, and M. G. REICHENBACH.

GUIDE TO COOL-ORCHID GROWING

By JAMES BATEMAN, Esq., F.R.S.,

Author of 'The Orchidaceæ of Mexico and Guatemala.'

Woodcuts, 1s.

LOVELL REEVE & CO., 5, HENRIETTA STREET, COVENT GARDEN.

EULOPHIA VIRENS.

Greenish Eulophia.

Nat. Ord. ORCHIDÆ.—GYNANDRIA MONANDRIA.

Gen. Char. (Vide supra, TAB. 5561.)

EULOPHIA *virens*; foliis gramineis lineari-lanceolatis scapis ramosis brevioribus, sepalis petalisque oblongis obtusis basi angustatis tessellatis, labelli trilobi barbati lobis lateralibus abbreviatis intermedio ovato obtuso, calcare erectiusculo conico. *Lindl. Gen. et Sp.*

SERAPIAS epidendroides. *Retz. Obs. 6. 65.*

LIMODORUM *virens*. *Roxb. Corom. v. 1. t. 38.*

LIMODORUM epidendroides. *Willd. Sp. Pl. v. 4. p. 123-4.*

This is not by any means a showy plant, a circumstance that may have had something to do with its tardy introduction to European collections. It is a native of the Nilgheries and also of Ceylon where Mr. Thwaites met with it, and it is to him that the Royal Gardens at Kew are indebted for living specimens, one of which flowered there not long ago. It may be treated like the *E. euglossa*, figured in the February number of this work.

DESCR. *Pseudobulbs* roundish-ovate, two or three inches long, bearing several narrow grassy *leaves*, which are shorter than the branched or sometimes simple *scapes*. *Sepals* and *petals* nearly equal, oblong, bluntly pointed, narrowed at the base, of a yellowish-green, tessellated with brown lines. *Lip* longer than the petals, white with purple streaks, three-lobed, the lateral lobes being shortened, and the central one crisp at the margin obtuse and recurved at the apex, and furnished with rows of dark hairs along its disk; at its base is a short nearly upright conical spur. *Column* continuous with the lip, but not more than a third of its length.—*J. B.*

Fig. 1. Lip and column, seen sideways. 2. Lip. 3. Column. 4. Pollen-masses:—*magnified.*

JUNE 1ST, 1866.

SCILLA COOPERI.

Cooper's Squill.

Nat. Ord. LILIACEÆ.—HEXANDRIA MONOGYNIA.

Gen. Char. (*Vide supra*, TAB. 5308.)

SCILLA *Cooperi*; bulbo subgloboso, foliis 8–10 poll. longis elongato-lanceolatis obtusiusculis striatis utrinque concoloribus subtus purpureo lineatis et basin versus maculatis, scapo viridi foliis brevior, racemo 2–3-pollicari subdenso cylindrico, pedicellis patentibus pallide purpureis $\frac{1}{8}$ – $\frac{1}{2}$ poll. longis, bracteis minutis, floribus purpureis $\frac{1}{3}$ poll. latis, petalis patentibus non reflexis oblongis obtusis dorso apice incrassatis, staminibus erectis, antheris peltatis, ovario breviter stipitato depresso-hemisphærico 6-sulcato basi dilatato 6-lobo, stylo brevi recto, loculis 2-ovulatis, ovulis geminis.

The Cape bulbs are sufficiently numerous and difficult of determination to form a study of themselves; and as they are wanting neither in interest nor beauty, it is to be hoped that they may soon find a historian. At present all is confusion as regards the genera and species of this long-cultivated tribe, and we know no more difficult plants than these to name. The pretty species here represented has the habit and appearance of many *Drimias*, but differs from the typical species of that genus in the two-ovuled cells of the ovary, and in the spreading lobes of the perianth, which are neither reflexed nor do they form a tube at the base. From the technical characters of *Scilla* it differs in the definite ovules; but as it agrees in other respects, and is evidently a very close ally of the Canary Island *S. Berthelotii* (Tab. nostr. 5308), which has also only two ovules in each cell, I cannot (in the present state of our knowledge) refuse it a place in that genus, of which but few Cape species have hitherto been described. The stipitate ovary, with two geminate ovules in each cell, occurs in other plants hitherto referred

to *Drimia*, and may form a good sectional or generic character for various plants hitherto referred to this genus or *Scilla*, and possibly belonging truly to neither. Our only knowledge of *S. Cooperi* is derived from Mr. Cooper's Cape bulbs, for which the Royal Gardens are indebted to Mr. Wilson Saunders, F.R.S.

DESCR. *Bulb* subglobose, purple, smooth. *Leaves* eight to ten inches long, three-quarters of an inch broad, narrow, linear-lanceolate, rather obtuse, striated, green on both sides, streaked with purple at the back, and spotted there towards the base. *Scape* shorter than the leaves, green. *Raceme* cylindrical, two to three inches long. *Flowers* rather close-set, dark-red purple; *pedicels* a quarter to half an inch long; *bracts* very small. *Perianth lobes* oblong, spreading, obtuse and thickened at the apex. *Stamens* inserted in the perianth lobes, shorter than they are; *anthers* oblong. *Ovary* hemispherical, six-lobed, with a broad six-lobed dilatation, then suddenly contracted to a short pedicel; *style* short, erect, subulate; *stigma* minute; *ovules* two, ascending in each cell, collateral.—*J. D. H.*

Fig. 1. Flower. 2. Ovary. 3. Transverse section of ditto:—*all magnified.*

CUPRESSUS LAWSONIANA.

The Lawson Cypress.

Nat. Ord. CONIFERÆ.—MONŒCIA MONANDRIA.

Gen. Char. Flores in diversis ramis monoici. MASC. Amenta terminalia, cylindrica. Stamina decussatim opposita, 4-fariam imbricata; *connectivo* peltato mutico, loculis 2 4 subglobosis. FÆM. Amenta terminalia, subglobosa; *squamis* 6-12, basi superne incrassatis, inferne solutis. Ovula ad basin squamarum pauca v. plurima, erecta, lagæniiformia. Strobilus e squamis lignosis suborbicularibus angulatis peltatis, vertice mucronatis v. umbonatis, primum conniventibus, demum hiantibus. Semina ad basin stipitis squamarum 2-3-∞, compressa v. angulata, marginata v. alata. Embryo in axi albuminis carnosus 2-cotyledonus.—Arbores et frutices sempervirentes. Folia minuta, decussatim imbricata, squamæformia v. rarius acerosa, sæpe dorso glandula notata. Gemmæ nudæ.

CUPRESSUS *Lawsoniana*; arborea, ramis patulis 4-gonis, foliis appressis imbricatis late ovatis acutis ovato-triangularibusve dorso sæpissime glanduliferis, strobilis parvis globosis glaucis, squamis ad 8, vertice rhombeo lamina horizontali v. decurva patente late triangulari acuta instructo, ovulis 3-4, seminibus alatis.

CUPRESSUS *Lawsoniana*. Murray ex Gordon, *Pinet.* p. 62.

? CHAMÆCYPARIS *Boursieri*. Dene. Ann. Soc. Bot. France, 1854, p. 70. Carrière, *Traité Gen. Conif.* p. 141.

The beautiful tree here represented has for the last few years been a great favourite in our gardens and shrubberies. and though a good many years must elapse before it attains arboreous stature (it is said to rise to a hundred feet in its native country), it has reached a sufficient height (fourteen to twenty feet) to demonstrate that it increases in beauty with its years up to that and probably a much greater elevation. It was discovered—by Mr. Jeffrey, I believe—in the mountain valleys of northern California, lat. 40°-42° N., and the first description I find of it is in Gordon's valuable 'Pine-tum.' According to this author, the *C. Boursieri* of De-caisne is a synonym of it. Not having seen that plant, we cannot confirm the identification; but if correct, it is very

possible that the name *C. Boursieri* should replace that of *Lawsoniana*,—a contingency that would be greatly to be regretted, as the name of one of the most active and intelligent introducers of rare Conifers is now deservedly and indissolubly connected with this beautiful plant.

Gordon compares *C. Lawsoniana* with *C. Nootkaensis*, and justly, the plants bearing a considerable resemblance in a living state, and being with difficulty distinguished in the herbarium: *C. Lawsoniana* is, however, a much more feathery species, with more fan-like branches and slenderer branchlets; the leaves also are of a glossier green, and the cones quite different, being smaller, glaucous, with a transverse, flat, acute, horizontal or recurved plate across the boss, very different from the more conical horn of *C. Nootkaensis*. The genus *Chamaecyparis*, to which both these species have been referred, is utterly futile, its only character, that of the scales bearing two instead of many ovules as in most Cypresses, breaks down in the present species, whose ovules vary in number from two to four or even five or six.

DESCR. A large tree, said to attain a hundred feet in height, with a narrow pyramidal coma. *Branches* spreading, fan-like and feathery in aggregate. *Branchlets* tetragonous, slender. *Leaves* ovate or triangular-ovate, acute, appressed, convex on the back and there furnished with a rather obscure gland. *Cones* globular, one-fourth to one-third of an inch in diameter, of about eight decussating scales. *Scales* rhomboidal, with a flattened and transverse lamina at the back of the boss. *Ovules* two to four at the base of each scale. *Seeds* with two wings.—*J. D. H.*

Fig. 1. Branchlets and leaves. 2. Branch and male cone. 3 and 4. Stamens. 5. Female cone. 6 and 7. Seeds:—all but fig. 6 magnified.

WARSCREWIZELLA VELATA.

Veiled Warscewizella.

Nat. Ord. ORCHIDÆ.—GYNANDRIA MONANDRIA.

Gen. Char. Perigonium carnosum-membranaceum, oblique insertum. *Labelium* brevissime unguiculatum, subquadratum, lobatum, basi cucullatâ columnam amplectens, cæterum planiusculum, basi lamelliferum. Mentum modicum. *Columna* semiteres, foveâ triangulâ angustâ sub rostello trilobo absconditâ, lobus rostelli medius prosiliens. *Anthera* depresso-mitrata, apiculata, valvis posticis persistentibus, bilocularis. *Pollinia* 2 depressa, oblonga, altè bipartita, in caudiculâ ligulatâ, apice hastatâ. *Glandula* rhombea. (*Character ex Reichenbach.*)

WARSCREWIZELLA *velata*; ebulbis, foliis (4-5) spithamæis pedunculis unifloris duplo longioribus, sepalis petalisque reflexis, sepalis lateralibus lanceolatis acutis dorsali majore, petalis lato-ovatis acutis, labello expanso subquinelobo a basi brevissime unguiculato, callo semi-ovato variè dentato in laminam transcendente, carinis transcendentibus integerrimis; columnâ utrinque angulatâ.

WARSCREWIZELLA *velata*. *Rehb. fil. in Schl. Bot. Zeit.* 1865, p. 99.

ZYGOPETALUM *velatum*. *Idem in litt.*

The genera *Huntleya*, *Bollea*, *Warrea*, *Warscewizella*, *Pescatorea*, and *Zygopetalum*—to any one of which our present subject might put forth a claim to belong—form a sort of tangled skein, which neither a Lindley nor a Reichenbach have yet been able to unravel. I frequently pressed my late lamented friend, the former of the two botanists referred to, to undertake the examination of this difficult subject, but death snatched him away before he could bring himself to deal with a problem on which his views were constantly fluctuating, and I doubt whether the matter is even now ripe for solution. I find that Reichenbach, who saw the present plant in flower, regards it as identical with his own *W. velata*, but there is also a considerable resemblance to *W. marginata*, figured in 'Pescatorea' and in the Professor's own 'Kenia Orchidacea.'

For my own part, although I formerly had doubts as to

whether *Huntleya* and *Warscewizella*—exactly alike as they are in habit—were really distinct in the structure of their flowers, I confess that at present I decidedly incline to the latter view; and if *Warscewizella* be maintained as a genus, there can, I think, be no doubt at all that the plant on the opposite page ought to belong to it.

But whatever the name it may ultimately bear, the plant itself is unquestionably well worthy of cultivation, than which nothing can be more simple; a moderately warm house and protection from the direct rays of the sun being all that is required. It flowers at all seasons, and is agreeably fragrant. It was discovered in New Granada by Mr. Blunt, who sent plants of it, and of many other varieties of the same species, to his employers, Messrs. H. Low and Co., of Clapton.

DESCR. Whole plant scarcely a foot high, the *leaves* (there are no pseudobulbs) grow in tufts of (generally) five, the larger ones about a span long. *Peduncles* short, rising from among the leaves, one-flowered, each tuft of leaves usually producing about four, of which not more than one or (at most) two are in perfection at the same time. *Petiole* about three inches long. *Sepals* and *petals* an inch long, yellowish-white, curved backwards, acute, the lateral sepals being much narrower than the upper, which is itself about equal to the broadly-ovate petals. *Lip* very large, spread wide open, but resting on a very short mentum, generally of the same hue as the petals, but with a crimson margin and some deep-purple streaks on its disk; it is slightly five-lobed and furnished at its base with a strong callosity, resembling a semicircular row of teeth, of which there are five or seven, all running forwards into as many furrows. *Column* angled on each side.—*J. B.*

Fig. 1. Front view of lip. 2. Column. 3. Pollen-masses.

BEGONIA GERANIOIDES.

Geranium-leaved Begonia.

Nat. Ord. BEGONIACEÆ.—MONŒCIA POLYANDRIA.

Gen. Char. (Vide supra, TAB. 4172.)

BEGONIA (§ AUGUSTIA) *geranioides*; herbacea, subacaulis, laxe pilosa, foliis orbiculari-reniformibus obscure 7-9-lobis, lobis obtuse crenatis, stipulis parvis ovato-lanceolatis ciliatis, cymis paniculatis multifloris, bracteis ovatis oblongisve obtusis ciliatis, floribus albis 1 poll. diametro, *masc.* sepalis petalisque 2 fere orbicularibus, staminibus liberis, antheris filamentis æquilongis; *fœm.* sepalis 2, petalis 3 masculinis consimilibus, ovario 3-ptero, alis angulatis, placentis integris, stylis apice auriculato-2-lobis, extremitatibus stigmatum tortis.

The genus *Begonia*, though abounding in both tropical Asia and America, is comparatively rare in Africa. In A. De Candolle's monograph of the genus (*Prodr.* vol. xv.), out of upwards of three hundred described species, only about five are natives of continental Africa, and though a few have subsequently been added in this Magazine (*B. baccata*, Tab. 5554, *B. Mannii*, Tab. 5434), and others, still undescribed, are contained in the herbarium, the total number is as yet under a dozen. The present species, which was imported from Port Natal by Messrs. Backhouse, of York, and sent by them to the Magazine, belongs to the same section with all the other South African species, viz. *B. Dregei* (Tab. nostr. 3720), *B. Natalensis* (Tab. nostr. 4841), and the little-known *B. suffruticosa*: all inhabit the eastern coast and mountains. *B. geranioides* is a very elegant species, and forms a very pretty greenhouse ornament.

DESCR. A rather small species; the plant sent by Messrs. Backhouse is ten to fourteen inches high, throwing up numerous flowering stems and a crown of radical leaves. *Radical leaves* three to five inches in diameter, orbicular-reniform, obscurely seven to nine-lobed, bilobed at the base; *lobes* very

obtusely crenate, deep-green above, pale beneath, with a few scattered, weak, paleaceous hairs; *nerves* pale-reddish; *petioles* stout, bright-red; *stipules* ovate-lanceolate, ciliate, entire or serrate above. *Scapes* numerous, trichotomously branched, stout, many-flowered; *bracts* broadly ovate, obtuse, toothed above, ciliate. *Flowers* nodding, an inch in diameter, pure white. *Male fl.*: *Sepals* two, nearly orbicular. *Petals* two, similar. *Stamens* short; *filaments* free, as long as the oblong anthers. *Female fl.*: *Sepals* two and *petals* three, like those of the male. *Ovary* three-winged, three-celled; *wings* two projecting in an obtuse angle, the other more obtuse. *Placentæ* entire, covered with ovules. *Style* cleft to the middle into three, reniform, papillose stigmas, whose extremities are twisted.—*J. D. H.*

Fig. 1. Stamen. 2. Ovary, style, and stigmas. 3. Transverse section of ovary :—*all magnified.*

MYRSIPHYLLUM ASPARAGOIDES.

Asparagus-leaved Myrsiphyllum.

Nat. Ord. LILIACEÆ.—HEXANDRIA MONOGYNIA.

Gen. Char. Perianthium corollinum, 6-partitum, æquale, campanulato-connivens, apice patens. Stamina 6, basi laciniarum affixa, filamentis subulatis; antheræ peltatæ, erectæ. Ovarium breviter stipitatum, 3-loculare; styli 3, stricti, contigui, stigmatibus simplicibus; ovula in loculis 2, superposita. Bacca globosa, 3-locularis, loculis 2-spermis. Semina angulato-subglobosa, testa coriacea atra, umbilico ventrali punctiformi.—Suffrutex gracilis, Capensis, glaber. Folia breviter petiolata, ovato-lanceolata, nervosa. Flores ad basin folii ex axilla squamulæ scariosæ gemini v. terni, pedicellis nutantibus, medio articulatis. Endl.

MYRSIPHYLLUM *asparagoides*; gracillimum, ramis flexuosis, foliis ovato-oblongis ovato-cordatisve acutis nitidis, floribus parvis viridibus nutantibus.

MYRSIPHYLLUM *angustifolium*. Mill. Dict. n. 2. Willd. Sp. Pl. l.c. Ait. Hort. Kew. v. 1. p. 490.

MYRSIPHYLLUM *asparagoides*. Willd. in Berl. Mag. v. 2. p. 25.

MEDEOLA *asparagoides*. Willd. Sp. Pl. v. 2. p. 270. Redouté, Liliac. t. 442.

DRACÆNA *Medeoloides*. Linn. fil. Suppl. 203.

ASPARAGUS *Medeoloides*. Thunb. Prodr. Fl. Cap. 66.

Myrsiphyllum asparagoides, though hitherto never figured in this country, was introduced into England so early as 1702, by the Duchess of Beaufort. Although long since almost gone out of cultivation, we have no hesitation in calling attention to it, as one of the most elegant greenhouse climbers that can well be found; nothing, indeed, can exceed the feathery lightness of the plant when well grown and flowered; and whether on account of its graceful habit, its flowering in mid-winter, the uniformity of its bright-green foliage, and perfume of its pearly flowers, it is one of the plants best suited for table decoration and ornamentation generally hitherto introduced. It is a native of various parts of the Cape of Good Hope colony, whence the plants here

figured were sent by Mr. Cooper, and contributed by our friend W. Wilson Saunders, Esq., F.R.S. It flowered at Kew from January to March. The only other described species, *M. angustifolia*, appears to me not even to rank as a variety, the leaves being most variable on the same specimen.

DESCR. A slender bright-green greenhouse creeper. *Stems* much branched, flexuose. *Leaves* (flattened branches) alternate, and, like those of *Ruscus*, inserted in the axil of a minute scale, ovate ovate-cordate or ovate-lanceolate, acute, quite entire, glabrous on both surfaces. *Flowers* solitary or in pairs or threes in the axils of the leaves, pendulous on slender, articulated, short pedicels, one-third of an inch long, pearly-white or greenish. Segments of *perianth* linear, obtuse, reflexed. *Stamens* erect, with small orange-red anthers. *Ovary* shortly stipitate, three-celled, with two superposed ovules in each cell. *Berry* globose, fleshy, six-seeded.—
J. D. H.

4. Germen. 5. Transverse section of ditto:—*all magnified.*

J. B. BROWN & CO.'S NEW PATENT B B LAWN MOWER.

Manufactured
by
J. B. Brown & Co.,
148,
Upper Thames
Street,
London.

Guaranteed to
give perfect
satisfaction, and
if not approved of
may be at once
returned.

J. B. BROWN and Co., having so very successfully introduced, at the recent Meeting of the Bath and West of England Society at Hereford, in June 1865, the NEW PATENT B B LAWN MOWER, of their own manufacture, beg to mention that having supplied the large number of MACHINES ordered on that occasion, and up to the present time, with most unqualified satisfaction to every one, so far as they are aware, they are now actively preparing to execute further orders for the approaching season; and, owing to the large number of such orders already received, they would very respectfully solicit all intending orders to be sent with as little delay as possible,—say to be executed at any time during the opening of the spring, or in the course of the summer, as may be desired.

PRICES—including Carriage to any Railway Station or Shipping Port in England.

10-inch Machine . £3 10 0	} Easily Worked by a Boy.	18-inch Machine . 7 10 0	} Easily Worked by a Man.	
12-inch Machine . 4 10 0		20-inch Machine . 8 0 0		
14-inch Machine . 5 10 0		22-inch Machine . 8 10 0		} Ditto by Two Men.
16-inch Machine . 6 10 0		24-inch Machine . 9 0 0		

If with brass mounted Grass Box, gold lettered, 5s. extra.

*** Every Machine sent out is warranted to give ample satisfaction, and if not approved of may be exchanged for any other size of Machine, or for the Machine of any other maker, or may be at once returned unconditionally.

J. B. BROWN & CO.: OFFICES, 18, CANNON STEET, CITY, LONDON, E.C.
(Nearly opposite St. Swithin's Lane and "London Stone," and near London Bridge.)
WAREHOUSE (where Stock is kept), 148, UPPER THAMES STREET E.C.
(Opposite the City of London Brewery, and close to the London Bridge Steamboat Piers.)

HEATING BY HOT WATER.

It is now generally admitted that Buildings of any kind can be more effectually warmed by Hot Water than by any other means; but as so much depends on the way in which the Apparatus is fixed, it is of the greatest importance that it be done by experienced men.

J. JONES & SONS are prepared to estimate for Warming, to any extent—

GREENHOUSES.
CONSERVATORIES.
VINERIES.
HOTHOUSES.
FORCING PITS.
PEACH HOUSES.
PINE STOVES.
ORCHARD HOUSES.

CHURCHES.
CHAPELS.
SCHOOLS.
READING ROOMS.
LECTURE ROOMS.
BILLIARD ROOMS.
HALLS AND PASSAGES.
BATHS.

FACTORIES.
OFFICES.
WORKSHOPS.
WAREHOUSES.
DRYING ROOMS.
CELLARS.
COACH-HOUSES.
HARNESS ROOMS.

J. JONES & SONS' Apparatus is simple in construction, moderate in cost, and economical in working.

It is equally available for the Amateur's Greenhouse, or the longest range Forcing Houses; for the smallest Chapel or the largest Church; for Private Offices or those of Public Companies.

It is admirably adapted for Dwelling Houses, as coils of pipes can be placed in any part, for warming the various rooms. One or more Baths may be heated from the same boiler, and a constant supply of hot water obtained in any part of the house.

For Warehouses and Workshops this system of heating is unsurpassed, as it is not only the means of keeping goods dry, but it also adds to the comfort of the workpeople, and thereby effects a saving in labour.

J. JONES & SONS recommend boilers of all kinds being set in brickwork where possible; but portable boilers can be supplied, if required.

MATERIALS.—All Materials supplied will be of the best quality.

DELIVERY.—Boilers of various kinds, and pipes and connections, being always in stock, can, at a very short notice, be sent to any part.

FIXING.—The Fixing will be done by experienced men, fully capable of finishing properly any work they may undertake; and J. JONES & SONS are prepared to guarantee the effectual working of any apparatus fixed by their own men.

ESTIMATES.—Plans and Estimates will be sent on application.

J. JONES & SONS,
IRON MERCHANTS AND HORTICULTURAL ENGINEERS

CURTIS'S

BOTANICAL MAGAZINE,

COMPRISING

THE PLANTS OF THE ROYAL GARDENS OF KEW,
AND OF OTHER BOTANICAL ESTABLISHMENTS IN GREAT BRITAIN,
WITH SUITABLE DESCRIPTIONS;

BY

JOSEPH DALTON HOOKER, M.D., F.R.S. L.S. & G.S.,
Director of the Royal Botanic Gardens of Kew.

~~~~~  
Nature and Art to adorn the page combine,  
And flowers exotic grace our northern clime.  
~~~~~

LONDON:

LOVELL REEVE & CO., 5, HENRIETTA STREET, COVENT GARDEN.

1866.

THE HYDROPULT,

AN INVENTION FOR THROWING WATER BY HAND-POWER.

(SECURED BY ROYAL LETTERS PATENT.)

Weights but 8 lbs.

Will throw 7 or 8 Gallons of Water per minute 50 feet, when worked by the power of one Man.

PRICE LIST.

Complete with Brass Cylinders and Japanned Stirrup, £1. 12s. 6d.

Complete with Brass Cylinders and Copper Stirrup, £2. 2s.

The price, "complete" as above, includes 2½ feet Suction, and 3 feet Delivery Hose, Galvanized Wire Strainer, Rose, and Small Jet.

THE HYDROPULT

Is invaluable for use in the Garden for

WATERING BEDS,
SPRINKLING PLANTS,
DROWNING OUT INSECTS,
CLEANSING TREES FROM SMUTS,
DRESSING WITH LIQUID MANURE, ETC. ETC.

THE HYDROPULT

Is desirable in every Household for

WASHING WINDOWS.
WETTING SIDE WALKS,
SPRINKLING STREETS,
WASHING CARRIAGES,
EMPTYING CISTERNS,
FILLING BARRELS,
A SPRAY BATH, ETC. ETC.

ORDERED BY THE WAR DEPARTMENT AS FIRE ENGINES.

ROBERT HOGG, LL.D. & F.L.S., REV. H. DOMBRAIN, A.B., SHIRLEY HIBBERD ESQ., F.R.H.S., THOMAS RIVERS, ESQ. (the eminent Florist), and other well-known gentlemen, recommend the Hydropult as an Invaluable Garden Implement.

The Hydropult will draw water horizontally, if necessary, through Two Hundred Feet Suction Hose, and force it through Delivery Hose to an altitude of One Hundred Feet.

THE GREENHOUSE AND CONSERVATORY HYDROPULT.

A NEW AND BEAUTIFUL IMPLEMENT,

Weighing scarcely 5 lbs.

And specially adapted for use in the Greenhouse and Conservatory.

Price 35s.

Complete, with Brass Cylinders and Copper Stirrup, 2½ feet Suction and 3 feet Delivery Hose, Strainer, Rose, and Fan.

This New Implement must necessarily supersede Syringes and other devices of the kind, for it will be found more effective in its operation.

A LADY CAN WORK IT FOR HOURS WITHOUT FATIGUE.

CAUTION.—Important to the Public.—The extensive sale of the Hydropult has excited the cupidity of some respectable, but in reality unprincipled Manufacturers, who are now palming on the Public worthless imitations of the Hydropult, and through their connections are enabled to place said devices on exhibition, and for sale, in many of the principal Ironmongery and Seed Establishments throughout the City and provinces. These devices resemble in many respects the Hydropult in appearance, and are calculated to deceive the unsuspecting. The Proprietor therefore, issues this Caution, and respectfully intimates that parties wishing to purchase the Hydropult should examine the machine offered for sale, and see if it has attached thereto a label, with the following words:—"The Hydropult, Vose's Patent, manufactured only by GRIFFITHS & BROWITT, Birmingham. CHARLES POMEROY BUTTON, Proprietor, & and 143, Cheapside, London." Unless this label is attached, the machine is not the Hydropult.

PROSPECTUSES, WITH TESTIMONIALS, ON APPLICATION.

HYDROPULT SHOW-ROOM, 142 & 143, CHEAPSIDE, LONDON.
CHARLES POMEROY BUTTON, PROPRIETOR.

BOTANICAL MAGAZINE ADVERTISER.

SHANKS' PATENT LAWN MOWERS FOR 1866.

Patronized on Five separate occasions, during the Season of 1864, by

HER MAJESTY THE QUEEN,

AND ONCE BY HIS MAJESTY THE KING OF SAXONY;

AGAIN ON FOUR SEPARATE OCCASIONS DURING THE SEASON OF 1865 BY HER MAJESTY THE QUEEN;

ONCE BY HIS MAJESTY THE KING OF HOLLAND;

AND ONCE BY HIS MAJESTY THE KING OF PRUSSIA.

HORSE MACHINE.

PONY MACHINE.

HAND MACHINE.

ALEXANDER SHANKS & SON, in presenting their LAWN MOWERS for the approaching Season, are gratified to be able to state that the demand for their celebrated Machines is rapidly increasing.

A. S. & SON, in introducing Improvements into their Machines, have been careful that no Improvement be introduced which has merely novelty to recommend it, but that the advantages in point of durability and simplicity of construction, which have always been a peculiarity of their Machines, should still remain.

A. S. & SON can confidently assure their numerous Friends and Customers and the Public generally that their endeavour will always be to supply a Machine, first-class in every way, one which cannot be surpassed if even equalled, whether for simplicity of construction, ease in working, or durability. None but the best materials and skilled workmen are employed in the manufacture of their Machines.

PRICES—Including Carriage to most of the principal Railway Stations and Shipping Ports in the Kingdom.

SHANKS' NEW PATENT HAND MACHINE FOR 1866.

10-inch Machine.....£3 10 0	} Easily worked by a Lady. Do. by a Boy. Do. by a Man.	19-inch Machine.....£7 12 6	} Do. by a Man and a Boy. Do. by Two Men.

42-inch Machine..... 26 0 040s. extra.
48-inch Machine..... 28 0 040s. extra.

Silent Movement, 20s. extra; Boots for Horse's Feet, 24s. per Set.

SHANKS' PATENT LAWN MOWERS cut the Grass on uneven as well as on level Lawns; and it is quite immaterial whether the Grass be *wet or dry*.

Every Machine warranted to give ample satisfaction, and if not approved of, can be at once returned.

ALEXANDER SHANKS & SON,
27, LEADENHALL STREET, LONDON.
 MANUFACTORY, DENS IRONWORKS, ARBROATH.

A. S. and SON keep a Stock of Lawn Mowers at 27, Leadenhall Street, London, from which Orders can be at once executed. They also have at their London Warehouse a staff of experienced Workmen thoroughly acquainted with all the details of these Machines, so that they are enabled to repair Lawn Mowers in London as well as at the Manufactory.

DESTROY YOUR INSECT PESTS.

You may easily destroy all Plant Pests,
Red Spider, Mealy Bug, Thrip, Green and Black Fly, American Blight, Ants, Scale, Mildew,
Without injury to the most delicate Plant or Tree, by using

FOWLER'S GARDENERS' INSECTICIDE,

Pronounced by all who have used it to be far superior to any other remedy.

One trial will prove its efficacy. Testimonials forwarded on application.

Price 1s. 6d., 3s., 5s. 6d., and 10s. per Tin. Orders amounting to 18s., Carriage Paid.—AGENTS REQUIRED.

Mr. George Parsons, of the Keymer, Hassock's Gate, and Brighton Nurseries, says:—"It is certainly the most effectual remedy that has at any time come under my notice—destroys every insect for which I have applied it, without the least injury to the most delicate plant."

Mr. Spary, F.R.H.S., of the Queen's Graperies, Brighton, says:—"I have had an opportunity of proving its efficacy, it having been applied to all plants affected with Green and Black Aphis, Scale, Red Spider, Thrip, etc., under my personal superintendence; the result has been satisfactory, without injury to the plants, and proved destructive to the insects."

Messrs. Wm. Wood and Son, Woodlands Nursery and Seed Warehouse, Maresfield, near Uckfield, Sussex, say:—"We have tried it on Roses affected with Mildew, Calceolarias covered with Green Fly, and Aucubas and Oleanders infested with Scale; and we have much pleasure in stating the plants are now perfectly clean and healthy."

Mr. George Quelch, Florist, Lewes Road, Brighton, says:—"It will give perfect freedom from insects, and in many instances more healthy verdure of foliage. It will prove one of the most welcome and lasting friends."

Mr. J. Cruttenden, of the Rose Hill Nurseries, Brighton, says he is "perfectly satisfied with the result; it will not only kill the insects, but will do so without in any way injuring the plants."

GEORGE AND THOMAS FOWLER, NORTH STREET, BRIGHTON.

BENJAMIN EDGINGTON,

MARQUEE, TENT, RICK CLOTH, AND FLAG MANUFACTURER,

By Special Appointment to HER MAJESTY and H.R.H. THE PRINCE OF WALES.
Also to the Royal Horticultural and Botanic Societies.

Rick Cloths, New and Second-hand, with Poles, etc., complete.

Marquees and Tents for Horticultural Shows, for Sale or Hire.

NETTING AND BUNTING FOR FRUIT TREES, ETC.

AN ILLUSTRATED CATALOGUE FREE ON APPLICATION.

Be particular to observe the Christian Name, and address—
BENJAMIN EDGINGTON (only), 2, DUKE STREET, LONDON BRIDGE, S.E.
No other Establishment.

NOTICE.—NEW HARDY CLIMBERS.

CLEMATIS, PRINCE OF WALES.

Large flowers of a rich deep violet-purple, with red bars down the centre of each sepal.
First-class Certificate. 21s. each.

CLEMATIS RUBELLA.

Very fine rich velvety claret; stamens pale green. First-class Certificate. 21s. each
The usual allowance to the Trade, and a List of Firms will be advertised at a later period. Will
be figured in the 'Floral Magazine' for September.

See Proceedings of Royal Horticultural Society's Scientific Meetings, June 27, 1865, p. 124, where James Bateman Esq., called attention to a few prominent objects, of which the following is an extract referring to the above Clematises.

"In the room you will notice an exhibition of Clematises, all of which are of a most magnificent type. Nothing can be more beautiful than these Clematises. See what fine large blue and purple petals they have, shining in some cases with metallic tints like the flowers of certain Ipomœas. They are varieties raised by those most successful hybridizers, Messrs. JACKMAN, of Woking, who will have the honour of introducing quite a new race of Clematises, which I believe will be 'amongst the best, if not the very best ornaments' for all out-of-door walls, etc."

Messrs. GEORGE JACKMAN & SON have much pleasure in informing the Public that they shall be in a position to send out the above two New Clematises in the coming Autumn (1866).

Orders will be taken now, and the Plants will be forwarded strictly. WOKING NURSERY, SURREY.

NEW SERIES OF NATURAL HISTORY.

* * * A good introductory series of books on British Natural History for the use of students and amateurs is still a *desideratum*. Those at present in use have been too much compiled from antiquated sources; while the figures, copied in many instances from sources equally antiquated, are far from accurate, the colouring of them having become degenerated through the adoption, for the sake of cheapness, of mechanical processes.

The present series will be entirely the result of original research carried to its most advanced point; and the figures, which will be chiefly engraved on steel, by the artist most highly renowned in each department for his technical knowledge of the subjects, will in all cases be drawn from actual specimens, and coloured separately by hand. *The following are now ready* :—

BRITISH FERNS; an Introduction to the Study of the Ferns, Lycopods, and Equiseta indigenous to the British Isles. With chapters on the Structure, Propagation, Cultivation, Diseases, Uses, Preservation, and Distribution of Ferns. By MARGARET PLUES. Crown 8vo, 16 Coloured Plates, and 56 Wood-Engravings by W. FITCH, 10s. 6d.

BRITISH BEES; an Introduction to the Study of the Natural History and Economy of the Bees indigenous to the British Isles. By W. E. SHUCKARD. Crown 8vo, 16 Coloured Steel Plates, comprising nearly 100 Figured Engraved from Natural Specimens expressly for the work, by E. W. ROBINSON, and numerous Wood-Engravings, 10s. 6d.

BRITISH BEETLES; an Introduction to the Study of our Indigenous COLEOPTERA. By E. C. RYE. Crown 8vo, 16 Coloured Steel Plates, comprising Figures of nearly 100 Species Engraved from Natural Specimens expressly for the work, by E. W. ROBINSON, and 11 Wood-Engravings of Dissections by the Author, 10s. 6d.

Nearly Ready.

BRITISH SPIDERS; an Introduction to the Study of our Native ARACHNIDA. By E. F. STAVELEY. Crown 8vo, 16 Coloured Plates and Wood-Engravings, 10s. 6d.

Other Works are in Preparation.

JUST PUBLISHED.

BOTANICAL MAGAZINE. Coloured Illustrations and Descriptions of the new and rare Flowering Plants of the Royal Gardens, Kew, and of other Botanical Establishments. By Dr. HOOKER, F.R.S., Director of the Royal Gardens, Kew. Monthly, with 6 Coloured Plates by W. FITCH, 3s. 6d.

GEORGE & THOMAS FOWLER, NORTH STREET, BRIGHTON.

WORKS ON BOTANY.

BENTHAM'S ILLUSTRATED BRITISH FLORA; a Description (with a Wood-Engraving, including dissections, of each species) of the Flowering Plants and Ferns indigenous to, or naturalized in, the British Isles. 2 vols. 8vo. 1295 Wood-Engravings, from Original Drawings by W. FITCH. £3. 10s.

BENTHAM'S HANDBOOK of the BRITISH FLORA; a Description of the Flowering Plants and Ferns indigenous to, or naturalized in, the British Isles. For the Use of Beginners and Amateurs. 12s.

MOORE'S FIELD BOTANIST'S COMPANION; a Familiar Account, in the Four Seasons, of the most common of the Wild Flowering Plants of the British Isles. 24 Coloured Plates, by W. FITCH. 21s.

BENTHAM'S OUTLINES of ELEMENTARY BOTANY, as Introductory to Local Floras. 2s. 6d.

HOOKER'S FLORA of NEW ZEALAND; a Systematic Description of the Native Plants of New Zealand, and the Chatham, Kermadec's, Lord Auckland's, Campbell's, and Macquarrie's Islands. Part I. 16s. Published under the auspices of the Government of that colony. [Part II in the Press.

BENTHAM'S FLORA AUSTRALIENSIS; a Description of the Plants of the Australian Territory. Vols. I. and II., 20s. each. Published under the auspices of the several Governments of Australia. [Vol. III. nearly ready.

GRISEBACH'S FLORA of the BRITISH WEST INDIAN ISLANDS. 37s. 6d. Published under the auspices of the Secretary of State for the Colonies.

BENTHAM'S FLORA HONGKONGENSIS; a Description of the Flowering Plants and Ferns of the Island of Hongkong. With a Map of the Island. 16s. Published under the authority of Her Majesty's Secretary of State for the Colonies.

HOOKER'S FLORA of TASMANIA; Royal 4to, 2 vols. 200 Coloured Plates. £17. 10s. Published under the authority of the Lords Commissioners of the Admiralty.

HOOKER on the FLORA of AUSTRALIA, its Origin, Affinities, and Distribution. 10s.

HOOKER'S RHODODENDRONS of SIKKIM-HIMALAYA; being an account, Botanical and Geographical, of the Rhododendrons recently discovered in the Mountains of Eastern Himalaya, from Drawings and Descriptions made on the spot, by Dr. J. D. HOOKER, F.R.S. Folio, 30 Coloured Plates. £3. 16s.

MOGGRIDGE'S FLORA of MENTONE. Royal 8vo. Parts I. and II., each, 25 Coloured Plates, 15s.

WOODS'S TOURIST'S FLORA; Descriptive Catalogue of the Flowering Plants and Ferns of the British Islands, France, Germany, Switzerland, Italy, and the Italian Islands. 18s.

HOOKER'S BRITISH FERNS; Figures and Descriptions, with Analyses of the Fructification and Venation, of the Ferns of Great Britain and Ireland, systematically arranged. Royal 8vo, 66 Coloured Plates, £2. 2s.

HOOKER'S GARDEN FERNS; Figures and Descriptions, with Analyses of the Fructification and Venation, of a Selection of Exotic Ferns, adapted for Cultivation in the Garden, Hothouse and Conservatory. Royal 8vo, 64 Coloured Plates, £2. 2s.

HOOKER'S FILICES EXOTICÆ; Figures and Descriptions of Exotic Ferns, chiefly of such as are cultivated in the Royal Gardens of Kew. Royal 4to, 100 Coloured Plates, £6. 11s.

CHANTER'S FERNY COMBES; a Ramble after Ferns in the Glens and Valleys of Devonshire. Second Edition. 8 Coloured Plates and a Map of the County, 5s.

BERKELEY'S BRITISH MOSSES, containing all that are known to be Natives of the British Isles. 24 Coloured Plates, 21s.

BERKELEY'S BRITISH FUNGOLOGY, containing Characters of above a Thousand Species of Fungi, and a Complete List of all that have been described as Natives of the British Isles. 24 Coloured Plates, 30s.

BADHAM'S ESCULENT FUNGUSES of ENGLAND, containing an Account of their Classical History, Uses, Characters, Development, Structure, Nutritious Properties, Modes of Cooking and Preserving, etc. New Edition. Edited by F. CUREY, F.R.S. 12 Coloured Plates, 12s.

MUSSEY'S BRITISH MYCOLOGY, comprising Figures and Descriptions of the Funguses of interest and novelty indigenous to Britain. Royal 4to. First Series, 90 Coloured Plates, £7. 12s. 6d.; Second Series, 50 Coloured Plates, £4. 10s.

HARVEY'S PHYCOLOGIA BRITANNICA; or, History of British Seaweeds, containing Coloured Figures, Generic and Specific Characters, Synonyms and Descriptions of all the Species of Algæ inhabiting the Shores of the British Islands. Royal 8vo, 4 vols., 360 Coloured Plates, £6. 6s.

HARVEY'S SYNOPSIS of BRITISH SEA-WEEDS. 5s.

HARVEY'S PHYCOLOGIA AUSTRALICA; a History of Australian Seaweeds, comprising Coloured Figures and Descriptions of the more characteristic Marine Algæ of the South Hemisphere. Royal 8vo, 5 vols., 300 Coloured Plates, £7. 13s.

HARVEY'S NEREIS AUSTRALIS; or, Algæ of the Southern Ocean. Imperial 8vo, 50 Coloured Plates, £2. 2s.

NEW WORKS ON ORCHIDS.

Part III. now ready, Royal 4to, Ten Coloured Plates, 10s. 6d.,

SECOND CENTURY OF ORCHIDACEOUS PLANTS,

Selected from the subjects published in 'Curtis's Botanical Magazine' since the issue of the
'First Century.'

EDITED BY JAMES BATEMAN, Esq., F.R.S. & L.S.,

Author of 'A Monograph of *Odontoglossum*,' 'The Orchidaceæ of Mexico and Guatemala,' etc.

To be completed in Ten Parts.

Contents of Part II.

LISSOCHILUS HORSFALLII.
DENDROBIUM INFUNDIBULUM.
CYPRIPEDIUM HOOKERÆ.
DENDROBIUM CHRYSOTOXUM.
VANDA SUAVIS.

DENDROBIUM PARISHII.
WARSCEWIZELLA QUADRATA.
LÆLIA PRÆSTANS.
DENDROBIUM CREPIDATUM.
SACCOLABIUM CURVIFOLIUM.

Part III., Imperial folio, with Five Coloured Plates, price 21s.,

MONOGRAPH OF ODONTOGLOSSUM,

A GENUS OF THE VANDEOUS SECTION OF ORCHIDACEOUS PLANTS.

By JAMES BATEMAN, Esq., F.R.S.

Parts I. and II., each with 5 Coloured Plates, and occasional Wood Engravings, 21s.

Contents of Part III.

ODONTOGLOSSUM LINDLEYANUM.
ODONTOGLOSSUM GLORIOSUM.
ODONTOGLOSSUM WARNERIANUM.

ODONTOGLOSSUM STELLATUM.
ODONTOGLOSSUM ALEXANDRÆ.
ODONTOGLOSSUM REICHENHEIMII.

Folio, 41 Coloured Plates, £5. 5s., cloth gilt, morocco back; £6. 6s., whole morocco, elegant.

P E S C A T O R E A.

FIGURES OF ORCHIDACEOUS PLANTS, CHIEFLY FROM THE COLLECTION OF M. PESCATORE.

EDITED BY M. LINDEN,

With the assistance of MM. G. LUDDEMAN, J. E. PLANCHON, and M. G. REICHENBACH.

GUIDE TO COOL-ORCHID GROWING.

By JAMES BATEMAN, Esq., F.R.S.,

Author of 'The Orchidaceæ of Mexico and Guatemala.'

Woodcuts, 1s.

THE POPULAR SCIENCE REVIEW,

No. 20, for JULY, Price 2s. 6d., contains:—

PORTRAIT OF PROFESSOR HUXLEY, F.R.S. In Photo-Relief Printing.

HYDRÆ, OR FRESHWATER POLYPS. By the Rev. W. HOUGHTON, F.L.S. Illustrated.

HOW TO WORK WITH THE TELESCOPE. By R. A. PROCTOR, F.R.A.S. Illustrated.

ON THE EXHAUSTION OF OUR COAL. With Map.

HYBRIDIZATION AMONG PLANTS. By Rev. G. HENSLow, F.G.S.

ON THE LIGHT-EMITTING APPARATUS OF THE GLOWWORM. By H. E. FRIPP, M.D. Illustrated.

SUN FORCE AND EARTH FORCE. By B. W. RICHARDSON, M.A., M.D.

THE ERUPTION OF SANTORIN. By Professor D. T. ANSTED, F.R.S. Illustrated.

REVIEWS OF BOOKS.

SUMMARY OF SCIENTIFIC PROGRESS.

NEW WORK ON FERNS, BRITISH AND FOREIGN

By JOHN SMITH, A.L.S., OF KEW.

WITH TREATISE ON CULTIVATION IN HOTHOUSE, GREENHOUSE, OPEN-AIR, OR WARDIAN CASE.

In Crown 8vo, cloth, price 6s.

POPULAR NATURAL HISTORY WORKS.

SLUGS AND SNAILS, LAND AND FRESHWATER; a Plain and Easy Account of the Land and Freshwater Mollusks of Great Britain. Containing Descriptions, Figures, and a Familiar Account of the habits of each Species. By RALPH TATE, F.R.G.S. Foolscap cloth, 4s. plain; 6s. coloured. Fully Illustrated.

THE BRITISH REPTILES; a Plain and Easy Account of the Lizards, Snakes, Newts, Toads, Frogs, and Tortoises, indigenous to Great Britain. By M. C. COOKE, Author of 'The British Fungi,' etc. Foolscap 8vo, cloth, 4s. plain; 6s. coloured. Fully Illustrated.

THE BRITISH FUNGI (a Plain and Easy Account of); with especial reference to the Esculent and other Economic Species. By M. C. COOKE. With Coloured Plates. Foolscap 8vo, cloth, price 6s.

"The author is a thorough mycophagist, well acquainted with the peculiar features by which the most remarkable of the edible kinds of fungi may be known."—*Gardeners' Chronicle*.

"A very readable volume upon the lowest and least generally understood race of plants. For popular publication the book could not have been better done."—*Athenæum*.

RUST, SMUT, MILDEW, AND MOULD; an Introduction to the Study of Microscopic Fungi. By M. C. COOKE, Author of 'The British Fungi.' Foolscap 8vo, nearly coloured Figures, price 6s.

"There is a thoroughness about Mr. Cooke's writings which always makes his communications welcome. He is not content to gather information from cyclopædias, classify and adapt the same, and then give a new form to the thoughts of others. On the contrary, he strikes out a new course of study, and after a laborious course of original research produces an entirely original work, one on which nothing of the kind had been before attempted."—*Wesleyan*

LONDON: ROBERT HARDWICKE, 192, Piccadilly.

NEW BOOKS AND NEW EDITIONS

PUBLISHED BY GROOMBRIDGE AND SONS, 5, PATERNOSTER ROW.

EMANUEL AGUILAR ON THE PIANOFORTE.

This day is published, crown 8vo, cloth, gilt edges, price 3s. 6d.,

A LITTLE BOOK ABOUT LEARNING THE PIANOFORTE,

WRITTEN AND COMPILED

BY EMANUEL AGUILAR.

Containing information from the greatest authorities on every point connected with Pianoforte Playing. Minute instructions, when and how to commence, also Rules and Directions for Students and Teachers.

GRACE AGUILAR'S WORKS.

HOME INFLUENCE. A Tale for Mothers and Daughters. Fcap. 8vo, Illustrated, cloth gilt, price 5s.

THE MOTHER'S RECOMPENSE. A Sequel to Home Influence. With a Portrait of the Author and other Illustrations. Fcap. 8vo, cloth gilt, price 6s.

WOMAN'S FRIENDSHIP. A Story of Domestic Life. Fcap. 8vo, Illustrated, cloth gilt, price 5s.

THE VALE OF CEDARS; or, The Martyr. Fcap. 8vo, Illustrated, cloth gilt, price 5s.

THE DAYS OF BRUCE. A Story from Scottish History. Fcap. 8vo, Illustrated, cloth gilt, price 6s.

HOME SCENES AND HEART STUDIES. Tales. Fcap. 8vo, with Frontispiece, cloth gilt, price 5s.

THE WOMEN OF ISRAEL. Characters and Sketches from the Holy Scriptures. 2 vols., fcap. 8vo, cloth gilt, price 10s.

NEW WORK ON THE ROSE, BY SHIRLEY HIBBERD.

Crown 8vo, with numerous Illustrations, price 5s.,

THE ROSE BOOK.

A Practical Treatise on the Culture of the Rose, comprising the Formation of the Rosarium, the Characters of Species and Varieties, Modes of Propagating, Planting, Pruning, Training, and Preparing for Exhibition, and the Management of Roses in all Seasons.

BY SHIRLEY HIBBERD, F.R.H.S.,

Author of 'Rustic Adornments,' 'Profitable Gardening,' 'Book of the Aquarium,' etc. etc.

CONTENTS:

The Families of Wild Roses.	Pillar Roses.	Tea Roses in Towns.
The Families of Cultivated Roses.	Yellow Roses.	Various Modes of Propagating.
Forming the Rosarium.	Roses in Pots.	On the Formation of Standard
Culture of Roses in the Open Ground.	Roses in Beds.	Roses, and Roses on their own
Climbing Roses.	Roses in Great Towns.	Roots.

Small 8vo, cloth, Illustrated, price 3s. 6d., sent free by post for 42 stamps,

PROFITABLE GARDENING.

A Practical Guide to the Culture of Vegetables, Fruits, and other useful Out-door Garden Products; intended for the use of Amateurs, Gentlemen's Gardeners, Allottees, and Growers for Market.

BY SHIRLEY HIBBERD, F.R.H.S.,

Author of 'Rustic Adornments for Homes of Taste,' 'The Town Garden,' 'Book of the Aquarium,' etc.

LONDON: GROOMBRIDGE AND SONS, 5, PATERNOSTER ROW.

THE AERIAL CHAIR.

A wonderful application of the principle of oscillation. Entirely "*self-acting*," the operation requiring no assistance whatever.

MECONOPSIS NIPALENSIS, DC.

Nepalese Meconopsis.

Nat. Ord. PAPAVERACEÆ.—POLYANDRIA MONOGYNIA.

Gen. Char. (Vide supra, TAB. 5456.)

MECONOPSIS *Nipalensis*; herba elata, robusta, tota setis patentibus crinita pubesque stellata siccitate aurea oblecta, foliis caulinis sessilibus linearibus lineari-oblanccolatisve sinuato-lobatis, radicalibus petiolatis lineari-spathulatis subpinnatifidis, floribus racemosis aureis, pedicellis elongatis patentibus, capsula 8-10-valvi setis appressis pubesque stellata dense obsita.

MECONOPSIS *Nipalensis*. DC. *Prod. v. 1. p. 121.* *Hook. f. et Thoms. Fl. Ind. v. 1. p. 253.* *Hook. fil. Ill. Pl. Himal. t. ix.*

PAPAVER *paniculatum*. Don, *Prod. Fl. Nep. p. 197.* *Wall. Cat. t. 8123 A.*

This noble plant was originally discovered by the celebrated Dr. Wallich in the mountains of Nepal, and more recently collected by myself abundantly in the central dampest regions of the Sikkim Himalaya, where at elevations of 10-11,000 feet above the level of the sea it often ornaments the rank herbage that skirts the pine forest. A more stately and beautiful plant can hardly be imagined, except the Hollyhock, which it somewhat resembles in miniature. The genus *Meconopsis* abounds in the Himalaya, where the *M. aculeata*, Tab. 5456, and *M. Wallichii*, Tab. 4668, were also procured, and from whence other beautiful species remain to be imported:

For the specimen here figured I am indebted to those indefatigable and skilful cultivators, Messrs. Backhouse, of York, who flowered it in July, 1863.

DESCR. A tall, robust, simple or sparingly branched *herb*, three to five feet high, biennial (?), full of orange-yellow sap. *Stem* often one to two inches in diameter at the base, covered with spreading stiff hairs and shorter stellate down in more or less abundance. *Radical leaves* petioled, half to one and a

half foot long, linear-spathulate or oblong-lanceolate, sinuate-pinnatifid; *cauline* sessile. *Raceme* erect, lax-flowered, one to two feet high; *pedicels* distant, the lower sometimes two-flowered. *Flowers* pale-golden or sulphur-yellow, two to three inches in diameter. *Sepals* an inch long. *Petals* broadly obovate. *Stamens* with orange anthers. *Ovary* oblong, covered with erect yellow bristles; *style* columnar; *stigma* six- to ten-lobed; *placenta* six to ten. *Capsule* subclavate, on a stiff erect pedicel, densely strigose with yellow hairs. *Seeds* with a cancellated spongy testa.—*J. D. II.*

Fig. 1. Ovary. 2. Transverse section of ditto:—*both magnified.*

POLYSTACHYA PUBESCENS.

Hairy-stemmed Polystachya.

Nat. Ord. ORCHIDÆ.—GYNANDRIA MONANDRIA.

Gen. Char. (Vide supra, TAB. 4161.)

POLYSTACHYA *pubescens*; pseudobulbis fusiformibus 2-3-phyllis, foliis oblongo-lanceolatis subacutis spicis simplicibus teretibus erectis puberulis multifloris duplo brevioribus, floribus resupinatis (in genere majoribus), sepalis liberis ovatis concavis, petalis paulo minoribus obovatis obtusissimis, labello carinato trilobo sepals vix æquali laciniis lateralibus rotundatis, laciniâ mediâ ovatâ ad apicem paululum deflexâ callo triangulari piloso versus basin, columna basi paulo producta.

EPIPHORA *pubescens*. *Lindl. Comp. Bot. Mag. v. 2. p. 201.*

POLYSTACHYA *pubescens*. *Reichenbach fil. in Walpers' Ann. v. 6. p. 643.*

This is the prettiest species of a very unattractive genus. Its flowers are larger than those of any *Polystachya* hitherto discovered,—*P. grandiflora*, otherwise very different, alone excepted,—and they are of a brighter colour than those of *P. bracteosa*, while the tall, upright, unbranched, many-flowered spikes are quite peculiar.

I have little doubt that this is the *Epiphora pubescens* described by Lindley twenty-five years ago, although the form of the sepals varies from that of his diagnosis, for the term "*acutissima*" can scarcely be applied to those of the figure. But we are now accustomed to look for these little divergences, especially when a species—as in the present instance—occupies a long extent of country; for it was found first in Caffraria by Burchell, then in Delagoa Bay by Drége, near Somerset by Mrs. Barber, and on the eastern frontier of our South African possessions by Mr. Hutton. It flowered at Kew three years ago.

Dr. Lindley long since separated this plant—though with much hesitation—from *Polystachya* and founded upon it his genus *Epiphora*. But more recent discoveries would seem

to show that the two genera are not really distinct, and I am glad to find that Professor Reichenbach is quite of this opinion.

DESCR. Whole *plant* less than a foot high. *Pseudobulbs* distaff-shaped, more than an inch long, clothed at the base with large sheathing bracts that speedily become brown, and bearing two or three oblong-lanceolate *leaves*, which are from three to five inches long, leathery, and bluntly acute at their extremities. *Flower-spikes* twice the length of the leaves, terete, hairy, perfectly erect and many-flowered. *Bracts* triangular, concave, exceedingly acute, not half the length of the ovary, and standing out at right angles to the stem. *Flowers* resupinate, closely massed together, of a bright golden-yellow. *Sepals* hollow, ovate, rather blunt, streaked with red lines up the centre (inside). *Petals* rather less than the sepals, obovate, very blunt. *Lip* rather shorter than the sepals, deeply three-lobed, the lateral lobes stretched a little forwards and rounded, the middle lobe ovate, very acute, and with its apex slightly bent down, at base of lip there is a triangular callosity, covered with small dark hairs; there are, moreover, a few red streaks on its under surface. *Column* very short, semiterete, and most exceedingly clavate.—*J. B.*

Fig. 1. Flower. 2. Lip, spread flat. 3. Pollen-masses:—*magnified.*

LOBELIA NICOTIANÆFOLIA.

Tobacco-leaved Lobelia.

Nat. Ord. LOBELIACEÆ.—PENTANDRIA MONOGYNIA.

Gen. Char. Calyx 5-lobus, tubo obconico ovoideo v. hemisphærico. Corolla superne longitudinaliter fissa, 2-labiata, tubo cylindrico v. infundibuliformi recto; labio superiore sæpius minore et erecto, inferiore sæpius patente latiore 3-fido v. rarius 3-dentato. Antheræ 2 inferiores v. rarius omnes apice barbatae. Ovarium inferum v. $\frac{1}{2}$ -superum, rarissime subliberum.—Herbæ v. rarius suffrutices. Folia alterna. Flores sæpius racemoso-spicatae; pedicellis axillaribus. Corolla cærulea alba violacea rubra v. ex rubro aurea. DC.

LOBELIA *nicotianæfolia*; elata, robusta, sæpe ramosa, pubescens v. glabrata, foliis lanceolatis breviter petiolatis basi angustatis acuminatis denticulatis, racemo basi foliaceo composito, ramis pyramidatis, bracteis acuminatis glanduloso-dentatis, lobis calycinis tubo multoties longioribus serratis, corollæ labiis deflexis acuminatis, labii superioris lobis anguste lineari-lanceolatis labium inferius 3-lobum æquantibus.

LOBELIA *nicotianæfolia*. Heyne ex Rœm. et Sch. Syst. v. 5. p. 47. Roxb. Fl. Ind. v. 1. p. 506. DC. Prodr. v. 7. p. 381. Wall. Cat. p. 1304. Wight, Ill. Pl. Ind. Or. t. 135.

LOBELIA *excelsa*. Lesch. ex Roxb. Fl. Ind. Ed. Wall. v. 2. p. 114. DC. Prodr. v. 7. p. 381. Wall. Cat. n. 1305. Thwaites, Enum. Pl. Zeylan. p. 170. Wight, Ill. Pl. Ind. Or. t. 1173, 4.

LOBELIA *aromatica*. Moon, Cat. Wight, Ic. t. 1172.

RAPUNTIUM *Leschenaultianum et nicotianæfolium*. Presl, Prodr. Lobel. p. 24.

A stately plant, native of the Neilgherry and other mountains of the Indian peninsula and of Ceylon, for seeds of which the Royal Gardens are indebted to the late Mr. A. Black, Superintendent of the Botanical Gardens of Bangalore. It flowered in the temperate house in January of the present year, and attracted much attention for its striking habit and great height, attaining six feet and bearing a profusion of pale lilac blossoms. In its native country, it is said to grow ten and even twelve feet high. I follow Mr. Thwaites in re-

ducing the *L. excelsa* and *nicotianafolia* to one, but maintain the latter name as being the first published, viz. by Rœmer and Schultes in 1819, whilst that of *excelsa* did not appear till 1824, in Wallich's edition of Roxburgh's 'Flora Indica.'

DESCR. A tall, stout, herbaceous plant, six to twelve feet high, glabrous, or more or less pubescent, or even tomentose on the leaves below. *Stem* at the base as thick as the arm, simple or branched. *Leaves* narrow lanceolate, one to two feet long, acuminate, denticulate, more or less narrowed into a petiole; *veins* prominent beneath. *Raceme* simple or compound, the branches a foot and upwards long, densely covered with close-set flowers forming pyramidal summits of a pale lilac colour. *Bracts* acuminate, toothed, the lower foliaceous. *Pedicels* slender. *Calyx-tube* broadly hemispherical, five-ribbed; *lobes* lanceolate, longer than the tube, serrate. *Corolla* an inch long, upper lip of two linear acuminate pendulous lobes, as long as the lower, which is three-cleft to the middle, the outer lobes linear, the middle ovate-lanceolate, and all acuminate. *Anthers* deeply blue, two of them bearded. *Stigma* two-lobed—*J. D. H.*

Fig. 1. Calyx, style, and stigma,—*magnified.*

ANCYLOGYNE LONGIFLORA.

Long-flowered Ancylogyne.

Nat. Ord. ACANTHACEÆ.—DIANDRIA MONOGYNIA.

Gen. Char. Calyx 5-partitus, coloratus, laciniis subæqualibus v. inæqualibus. Corolla tubulosa, limbo brevi obliquo subregulariter 5-fido, laciniis patentibus v. recurvis. Stamina fertilia 2, exserta, cum 2 breviora ananthera; antheræ oblongæ, loculis parallelis hirtis ciliatisve basi calcaratis, calcaribus divergentibus. Ovarium 2-loculare; stylus filiformis, staminibus longior, apice uncinatus, stigmatibus bifido, lobo altero dentiformi v. deficiente; ovula 8. Capsula 4-gona, cuspidata, 8-sperma, septo crasso. Semina suborbicularia compressa, nitida, retinaculis cochleariformibus suffulta.—Herbæ Americæ tropicæ, caule 4-gono. Folia glabra, raphidibus farcta. Spicæ v. racemi terminales, compositi. Flores sæpe speciosi, 2-bracteati.

ANCYLOGYNE *longiflora*; foliis petiolatis ovato-oblongis obovato-lanceolatisve acuminatis subsinuato-dentatis, panicula nutante, calycis laciniis subulato-lanceolatis longe acuminatis corollæ tubo 2-pollicari tertiam partem æquantibus, corollæ tubo lento curvo supra medium modice inflato, læte purpureo, lobis brevibus rotundatis recurvis, filamentis elongatis filiformibus longe pectinato-ciliatis, pilis recurvis.

A most beautiful plant, with something of the inflorescence of *Russellia juncea*, introduced by Messrs. Veitch and Sons from Guayaquil, where it was discovered by their intelligent and most active collector, Mr. Pierce. It is undoubtedly one of the finest tropical *Acanthaceæ* ever introduced into this country, and cannot fail to be a most important accession to our stoves. It flowered with Messrs. Veitch in April of the present year.

The genus *Ancylogyne* of Nees, as previously known, consisted of a few Peruvian and Brazilian plants, none of which had hitherto been in cultivation.

DESCR. A glabrous, apparently suffruticose plant. Stems four-angled, and leaves glabrous or minutely pubescent. Leaves four to ten inches long, petioled, ovate-oblong or obovate-lanceolate, with long acuminate points, obscurely sinu-

ate or subserrate. *Flowers* arranged in a drooping elongated branched panicle, with subulate bracts at all the axils, one-eighth to one-fourth of an inch long, shortly pedicelled. *Calyx-lobes* one-third to one and a half inch long, nearly equal, subulate-lanceolate, purple. *Corolla* two inches long, nearly straight, cylindrical, and tubular, rather inflated above the summit of the calyx-lobes, bright vinous-purple; mouth oblique; lobes short, rounded, recurved. *Stamens* four, two fertile; *filaments* very slender, exerted, garnished throughout their length with two series of long recurved hairs; *sterile stamens* with shorter filaments. *Anthers* bright-yellow, the edge of the cells ciliated; *spurs* short, projecting. *Ovary* with eight ovules.—*J. D. H.*

Fig. 1. Base of corolla and stamens. 2. Summit of filaments and anther. 3. Ovary. 4. Longitudinal section of ditto:—*all magnified.*

ANGRÆCUM CHAILLUNUM.

M. Du Chaillu's Angræcum.

Nat. Ord. ORCHIDÆE.—GYNANDRIA MONANDRIA.

Gen. Char. Perianthium patens. Sepala et petala subæqualia, libera. Labellum sessile, cum basi columnæ continuum, carnosum, indivisum, petalis consimile v. iis latius; calcare recto v. flexuoso cornuto, sæpius subcylindraceo, perianthio æquilongo v. multo longiore, raro obconico. Columna nana, subteres, raro elongata et semiteres. Anthera 2-ocularis, truncata. Pollinia 2, 2-partibilia; caudicula brevi v. elongata angusta, glandula triangulari v. lanceolata.—Epiphytæ caulescentes. Folia coriacea, ligulata, apice obliqua v. 2-loba. Flores solitarii v. racemosi, albi virescentes v. citrini, sæpe herbacei.

ANGRÆCUM *Chaillunum*; foliis valde coriaceis ligulatis 4–6 poll. longis 1½ poll. latis apice 2-lobis, lobis valde inæqualibus rotundatis, marginibus undulatis, racemis 6–12-floris, bracteis amplis late ovatis subacutis acuminatisve, floribus ex albo virescentibus, sepalis petalis et labello consimilibus 1½ poll. longis anguste subulato-lanceolatis recurvis, calcare tenui elongato 3–5-pollicari, rostello valde elongato.

This very distinct *Angræcum* was sent from the Gaboon to the Royal Gardens, by M. Du Chaillu, on his return from his last adventurous journey in Western Africa, and flowered in May of the present year. The same plant was also sent by M. Gustav Mann (collector for the Royal Gardens) from the Nun river, on the same coast, but has not flowered. It was named *A. arcuatum* by the late Dr. Lindley, in the Hookerian Herbarium, but differs much from that South African species in the greater size, large flowers, longer, more acuminate sepals and petals, the spur several times longer than the perianth, and in the longer leaves, with undulated margins. I have given this the name of its celebrated discoverer.

DESCR. A small, stout epiphyte. Stems four to ten inches long, as thick as the little finger. Leaves loosely imbricate, four to six inches long, an inch and a half broad, leathery,

JULY 1st, 1866.

shrivelling much when dry, very unequally two-lobed at the apex; the *lobes* rounded, margins undulated, dark-green. *Racemes* drooping, four to eight inches long, lax-flowered. *Flowers* white, with a pale-greenish tinge. *Bracts* broadly ovate or boat-shaped, subacute or acuminate, brown. *Pedicel* with *ovary* an inch and a half long. *Petals*, *sepals* and *lip* all of equal length and similar, narrow lanceolate-subulate, with slender acuminate points, recurved, about an inch and a half long. *Spur* very long, slender, flexuous, twice or thrice as long as the perianth, pale yellow-green. *Column* short and stout. *Rostellum* much produced into a subulate beak. *Anther-case* with a projecting, obtuse beak, much shorter than the rostellum. *Pollinia* small.—*J. D. H.*

Fig. 1. Column and lip. 2. Column, anther-case, and rostellum. 3. Transverse section of ovary. 4. Upper view of column, anther-case, and rostellum. 5. Pollinia:—*all magnified.*

NEW SERIES
OF
NATURAL HISTORY FOR BEGINNERS.

A good introductory series of books on British Natural History for the use of students and amateurs is still a *desideratum*. Those at present in use have been too much compiled from antiquated sources; while the figures, copied in many instances from sources equally antiquated, are far from accurate, the colouring of them having become degenerated through the adoption, for the sake of cheapness, of mechanical processes.

The present series will be entirely the result of original research carried to its most advanced point; and the figures, which will be chiefly engraved on steel, by the artist most highly renowned in each department for his technical knowledge of the subjects, will in all cases be drawn from actual specimens, and coloured separately by hand.

The following are now Ready.

BRITISH BEETLES; an Introduction to the Study of our Indigenous COLEOPTERA. By E. C. RYE. Crown 8vo, 16 Coloured Steel Plates, comprising Figures of nearly 100 Species, engraved from Natural Specimens, expressly for the Work, by E. W. ROBINSON, and 11 Wood-Engravings of Dissections by the Author. 10s. 6d.

BRITISH BEES; an Introduction to the Study of the Natural History and Economy of the Bees indigenous to the British Isles. By W. E. SHUCKARD. Crown 8vo, 16 Coloured Steel Plates, comprising nearly 100 Figures, engraved from Natural Specimens, expressly for the Work, by E. W. ROBINSON, and Wood-Engravings. 10s. 6d.

BRITISH FERNS; an Introduction to the Study of the Ferns, Lycopods, and Equiseta indigenous to the British Isles, with Chapters on the Structure, Propagation, Cultivation, Diseases, Uses, Preservation, and Distribution of Ferns. By MARGARET PLUES. Crown 8vo, 16 Coloured Plates, and 56 Wood-Engravings by W. FITCH. 10s. 6d.

Nearly Ready.

BRITISH SPIDERS; an Introduction to the Study of our Native ARACHNIDA. By E. F. STAVELEY. Crown 8vo, 16 Coloured Plates, drawn expressly for the Work by TUFFEN WEST, and numerous Wood-Engravings. 10s. 6d.

LOVELL REEVE & CO., 5, HENRIETTA STREET, COVENT GARDEN.

J. B. BROWN & CO.'S NEW PATENT B B LAWN MOWER.

Manufactured
by
J. B. Brown & Co.,
148,
Upper Thames
Street,
London.

Guaranteed to
give perfect
satisfaction, and
if not approved of
may be at once
returned.

J. B. BROWN and Co., having so very successfully introduced, at the recent Meeting of the Bath and West of England Society at Hereford, in June 1865, the NEW PATENT B B LAWN MOWER, of their own manufacture, beg to mention that having supplied the large number of MACHINES ordered on that occasion, and up to the present time, with most unqualified satisfaction to every one, so far as they are aware, they are now actively preparing to execute further orders for the approaching season; and, owing to the large number of such orders already received, they would very respectfully solicit all intending orders to be sent with as little delay as possible,—say to be executed at any time during the opening of the spring, or in the course of the summer, as may be desired.

PRICES—including Carriage to any Railway Station or Shipping Port in England.

10-inch Machine . £3 10 0	} Easily Worked by a Boy.	18-inch Machine . 7 10 0	} Easily Worked by a Man.	
12-inch Machine . 4 10 0		20-inch Machine . 8 0 0		
14-inch Machine . 5 10 0		22-inch Machine . 8 10 0		} Ditto by Two Men.
16-inch Machine . 6 10 0		24-inch Machine . 9 0 0		

If with brass mounted Grass Box, gold lettered, 5s. extra.

** Every Machine sent out is warranted to give ample satisfaction, and if not approved of may be exchanged for any other size of Machine, or for the Machine of any other maker, or may be at once returned unconditionally.

J. B. BROWN & CO.: OFFICES, 18, CANNON STEET, CITY, LONDON, E.C.

(Nearly opposite St. Swithin's Lane and "London Stone," and near London Bridge.)

WAREHOUSE (where Stock is kept), 148, UPPER THAMES STREET E.C.

(Opposite the City of London Brewery, and close to the London Bridge Steamboat Piers.)

HEATING BY HOT WATER.

It is now generally admitted that Buildings of any kind can be more effectually warmed by Hot Water than by any other means; but as so much depends on the way in which the Apparatus is fixed, it is of the greatest importance that it be done by experienced men.

J. JONES & SONS are prepared to estimate for Warming, to any extent—

GREENHOUSES.	CHURCHES.	FACTORIES.
CONSERVATORIES.	CHAPELS.	OFFICES.
VINERIES.	SCHOOLS.	WORKSHOPS.
HOTHOUSES.	READING ROOMS.	WAREHOUSES.
FORCING PITS.	LECTURE ROOMS.	DRYING ROOMS.
PEACH HOUSES.	BILLIARD ROOMS.	CELLARS.
PINE STOVES.	HALLS AND PASSAGES.	COACH-HOUSES.
ORCHARD HOUSES.	BATHS.	HARNESS ROOMS.

J. JONES & SONS' Apparatus is simple in construction, moderate in cost, and economical in working.

It is equally available for the Amateur's Greenhouse, or the longest range of Forcing Houses; for the smallest Chapel or the largest Church; for Private Offices, or those of Public Companies.

It is admirably adapted for Dwelling Houses, as coils of pipes can be placed in any part, for warming the various rooms. One or more Baths may be heated from the same boiler, and a constant supply of hot water obtained in any part of the house.

For Warehouses and Workshops this system of heating is unsurpassed, as it is not only the means of keeping goods dry, but it also adds to the comfort of the workpeople, and thereby effects a saving in labour.

J. JONES & SONS recommend boilers of all kinds being set in brickwork, if possible; but portable boilers can be supplied, if required.

MATERIALS.—All Materials supplied will be of the best quality.

DELIVERY.—Boilers of various kinds, and pipes and connections, being always in stock, can, at a very short notice, be sent to any part.

FIXING.—The Fixing will be done by experienced men, fully capable of finishing properly any work they may undertake; and J. JONES & SONS are prepared to guarantee the effectual working of any apparatus fixed by their own men.

ESTIMATES.—Plans and Estimates will be sent on application.

LONDON:

LOVELL REEVE & CO., 5, HENRIETTA STREET, COVENT GARDEN.

1866.

THE HYDROPULT,

AN INVENTION FOR THROWING WATER BY HAND-POWER.

(SECURED BY ROYAL LETTERS PATENT.)

Weights but 8 lbs.

Will throw 7 or 8 Gallons of Water per minute 50 feet, when worked by the power of one Man.

PRICE LIST.

Complete with Brass Cylinders and Japanned Stirrup, £1. 12s. 6d.

Complete with Brass Cylinders and Copper Stirrup, £2. 2s.

The price, "complete" as above, includes 2½ feet Suction, and 3 feet Delivery Hose, Galvanized Wire Strainer, Rose, and Small Jet.

THE HYDROPULT

Is invaluable for use in the Garden for

WATERING BEDS,
SPRINKLING PLANTS,
DROWNING OUT INSECTS,
CLEANSING TREES FROM SMUTS,
DRESSING WITH LIQUID MANURE, ETC. ETC.

THE HYDROPULT

Is desirable in every Household for

WASHING WINDOWS,
WETTING SIDE WALKS,
SPRINKLING STREETS,
WASHING CARRIAGES,
EMPTYING CISTERNS,
FILLING BARRELS,
A SPRAY BATH, ETC. ETC.

ORDERED BY THE WAR DEPARTMENT AS FIRE ENGINES.

ROBERT HOGG, LL.D. & F.L.S., REV. H. DOMBRAIN, A.B., SHIRLEY HIBBERD, ESQ., F.R.H.S., THOMAS RIVERS, ESQ. (the eminent Florist), and other well-known gentlemen, recommend the Hydropult as an Invaluable Garden Implement.

The Hydropult will draw water horizontally, if necessary, through Two Hundred Feet Suction Hose, and force it through Delivery Hose to an altitude of One Hundred Feet.

THE GREENHOUSE AND CONSERVATORY HYDROPULT.

A NEW AND BEAUTIFUL IMPLEMENT,

Weighing scarcely 5 lbs.

And specially adapted for use in the Greenhouse and Conservatory.

Price 35s.

Complete, with Brass Cylinders and Copper Stirrup, 2½ feet Suction and 3 feet Delivery Hose, Strainer, Rose and Fan.

This New Implement must necessarily supersede Syringes and other devices of the kind, for it will be found more effective in its operation.

A LADY CAN WORK IT FOR HOURS WITHOUT FATIGUE.

CAUTION.—Important to the Public.—The extensive sale of the Hydropult has excited the cupidity of so-called respectable, but in reality unprincipled Manufacturers, who are now palming on the Public worthless imitations of the Hydropult, and through their connections are enabled to place said devices on exhibition, and for sale, in many of the principal Ironmongery and Seed Establishments throughout the City and provinces. These devices resemble in many respects the Hydropult in appearance, and are calculated to deceive the unsuspecting. The Proprietor therefore, issues this Caution, and respectfully intimates that parties wishing to purchase the Hydropult should examine the machine offered for sale, and see if it has attached thereto a label, with the following words:—"The Hydropult, Vose's Patent, manufactured only by GRIFFITHS & BROWITT, Birmingham. CHARLES POMEROY BUTTON, Proprietor, & and 143, Cheapside, London." Unless this label is attached, the machine is not the Hydropult.

PROSPECTUSES, WITH TESTIMONIALS, ON APPLICATION.

HYDROPULT SHOW-ROOM, 142 & 143, CHEAPSIDE, LONDON.

CHARLES POMEROY BUTTON, PROPRIETOR.

BOTANICAL MAGAZINE ADVERTISER.

ORCHIS MACULATA SUPERBA.

OSBORN AND SONS are now taking orders for this beautiful hardy TERRESTRIAL ORCHID, for which a First-class Certificate was awarded on the 19th of June by the Floral Committee of the Royal Horticultural Society. It is of vigorous habit, 1½ to 2 feet high, has leaves transversely marked with very dark stripes, and a dense spike of spotted rose-coloured flowers 6 inches long. Price 5s. each, to be delivered in autumn.

FULHAM NURSERY, LONDON, S.W.

BENJAMIN EDGINGTON, MARQUEE, TENT, RICK CLOTH, AND FLAG MANUFACTURER,

By Special Appointment to HER MAJESTY and H.R.H. THE PRINCE OF WALES.

KLEINIA FULGENS.

Brilliant-flowered Kleinia.

Nat. Ord. COMPOSITÆ.—SYNGENESIA ÆQUALIS.

Gen. Char. Capitulum multiflorum, eradiatum, fere semper homogamum, floribus omnibus tubulosis 5-dentatis. Receptaculum planum. Involucrum 1-seriale, polyphyllum, bracteolis parvis sæpe calyculatum. Styli rami cono brevi basi ciliato terminati. Achænia erostris. Pappus setosus, subscaber, pluriserialis.—Herbæ et frutices Africanæ, carnosæ, sæpe glaucæ, ramis teretibus v. angulatis cicatricatis. Folia alterna, integerrima v. sinuato-dentata. Flores albi flavi aurantiaci v. subminiati.

KLEINIA *fulgens*; suffruticosa, glaberrima, glauca, ramis teretibus, foliis breviter petiolatis obovato-oblongis acutiusculis distanter obtuse serratis utrinque glaucis carnosis, nervis tenuibus, pedunculis sub-1-floris bracteatis, bracteis remotiusculis lineari-oblongis, capitulis ecalyculatis homogamis, involucri squamis linearibus acutis, floribus læte miniato-aurantiacis.

The genus *Kleinia* consists of some twenty species, all natives of South Africa, and many of them forming handsome plants, well worthy of cultivation in the succulent house. Amongst these is the subject of the accompanying Plate, which was sent from Port Natal, by Mr. Plant, to our indefatigable horticulturist W. W. Saunders, F.R.S., and in whose succulent-house it flowered in May of the present year. The species does not exist in our herbaria, nor is it described in Harvey and Sonder's 'Flora Capensis.' There is, however, a very similar plant in cultivation, brought from Angola by Dr. Welwitsch, which however, not having flowered, cannot be identified with it.

DESCR. A small, succulent, suffruticose plant, about two to three feet high in our houses, everywhere covered with a pale-green glaucous bloom. Stems branched, terete, brittle. Leaves succulent, four to six inches long, with short, broad, decurrent petioles, obovate-oblong, subacute, remotely bluntly serrate, uniformly smooth, glaucous and green on both surfaces, veins very indistinct. Flowering peduncles four to eight

nches long, erect, terete, one-flowered, loosely clothed with erect, linear, acute succulent bracts, half an inch to one inch long. *Heads* erect or inclined, an inch and a half long. *Involucre* terete, without any small scales at the base; *leaflets* eight to ten, linear, acute. *Florets* bright vermilion-orange. *Corolla-tube* slender; *lobes* linear-oblong. *Pappus* scabrid, unequal.—*J. D. H.*

Fig. 1. Vertical section of involucre and receptacle. 2. Floret. 3. Pappus. 4. Stamen. 5. Style and stigmas:—*all magnified.*

FREMONTIA CALIFORNICA.

Californian Fremontia.

Nat. Ord. MALVACEÆ.—PENTANDRIA MONOGYNIA.

Gen. Char. Flores 3-bracteati. Calyx patenti-campanulatus, coloratus, profunde 5-fidus, laciniis petaloideis leviter imbricatis. Petala 0. Stamina 5, filamentis basi in tubum confluentibus superne patentibus; antheræ reniformes, retrorsum dehiscentes (v. columna staminea 5-fida, ramis linearibus superne dilatatis et extrorsum antheras 2 1-loculares antheram 2-locularem simulantes ferentibus). Ovarium 5-loculare, loculis ∞-ovulatis; stylus filiformis, stigmatē acuto. Capsula loculicide 4-5-valvis. Semina ovata, testa crustacea nitida, albumine carnosō; cotyledones ovatæ, subplanæ.—Frutex Californicus, stellato-pubescentis. Folia cordata, lobata. Flores majusculi, flavi, pedunculis oppositifoliis.

FREMONTIA Californica. Torrey in Smiths. Contrib. v. 6. p. 5. t. 2. Walp. Ann. v. 4. p. 19. Hook. f. et Benth. Gen. Plant. v. 1. p. 212.

A very singular and beautiful hardy Californian shrub, imported by Messrs. Veitch, and which flowered at their nurseries in June of the present year. It is undoubtedly the choicest early-flowering shrub introduced of late years, and more than rivals the *Forsythias* in many respects. It was discovered during Colonel Fremont's adventurous United States Expedition to the Rocky Mountains in 1846, and bears the name of that gallant officer and highly-distinguished explorer.

The botanical characters of *Fremontia* are very anomalous. It was referred to a new section of *Bombaceæ* (*Fremontieæ*) by its founder, and correctly placed along with the famous Hand-plant, *Cheirostemon* (Tab. nostr. 5135), and the stamens were described as five, with two-celled anthers. On the other hand, certain considerations of affinity and structure induced Mr. Bentham and myself, following Dr. Torrey, to regard the apparently two-celled anthers of this plant and

Cheirostemon as consisting of two confluent single-celled anthers,—whence we referred both to the Order *Malvaceæ* instead of *Sterculiaceæ*. I must confess, however, that after examining living specimens of *Fremontia*, I am inclined to refer the *Fremontiæ* back to *Sterculiaceæ*, placing it next to the tribe *Sterculiææ*.

DESCR. A woody shrub, attaining ten feet in its native country, and resembling a Fig-tree. *Leaves* produced at the extremity of the branchlets, petioled; *petiole* slender, one to three inches broad, suborbicular, three- to seven-lobed; *lobes* entire or crenate, sparsely stellate-pubescent above, glaucous below, and ferruginous when dry. *Peduncles* as long as the petioles or shorter, stout, one-flowered. *Flowers* numerous, golden-yellow, two to two and a half inches in diameter, tribracteolate at the base; *bracts* small, ovate-subulate. *Calyx* broadly and openly campanulate, five-lobed to below the middle, petaloid, stellate-pubescent externally, villous internally, with five pits at the base; *lobes* orbicular, apiculate. *Staminal column* short, divided into five spreading arms, each terminated by two reniform parallel anther-lobes that dehisce outwardly. *Ovary* conical, pubescent, five-celled, with numerous ovules in each cell; *style* filiform, pilose, with spreading hairs; *stigma* acute.—*J. D. H.*

Fig. 1. Arm of staminal column. 2. Ovary. 3. Transverse section of ditto:—*all magnified.*

W. Fitch, del. et lith.

Vincent Brooks imp.

FERNANDESIA ROBUSTA.

Stout Fernandesia.

Nat. Ord. ORCHIDÆ.—GYNANDRIA MONANDRIA.

Gen. Char. Perianthium patens. Sepala libera. Petala conformia, sub sepalo supremo conniventia. Labellum anticum v. posticum, ecalcaratum, liberum, trilobum, disco tuberculatum. Columna brevis, utrinque aurita. Anthera bilocularis. Pollinia 2, solida, obovata.—Epiphytæ caulescentes. Folia disticha, equitantia, imbricata. Racemi pauciflori, terminales v. laterales. Flores parvi, lutei. Lindl. Gen. et Spec.

FERNANDESIA robusta; foliis carinatis ensiformibus acutis pedunculis unifloris subæqualibus, bracteis triangulis cucullatis acutis, sepalis oblongis apiculatis reflexis, petalis ovatis obtusis, labelli trilobi lobis basilaribus magnis erectis obtusis incurvis, lobo intermedio dilatato quadrifido cuneato lamellis crenulatis instructo, callo hexagono in imâ basi, columnæ alis brevibus rotundatis.

FERNANDESIA robusta. Bateman, mss., haud Klotzsch.

This, which is the largest of all the *Fernandesias*, was originally found in Guatemala by Mr. Skinner. More recently it has been reintroduced from the same country by that well-known ornithologist O. Salvin, Esq., who sent some plants of it to Kew, where they flowered freely, and enabled Mr. Fitch to prepare the figure on the opposite page.

F. robusta is nearly allied to the Brazilian plant *F. lunifera*, figured under the name of *Lockhartia lunifera* in Reichenbach's 'Xenia' (tab. 39. f. 3), but it comes from a totally different country, is much larger in all its parts, has sharp-pointed instead of blunt leaves, and is moreover furnished with an *hexagonal* (instead of *heart-shaped*, as in *F. lunifera*) callus on the disc of its lip. It is easily grown in any house where *Catleyas* or *Oncidiums* succeed, and flowers at different seasons.

DESCR. *Stems* upright, closely imbricated, about a foot high. *Leaves* keeled, an inch and a half long, sharp at the extremities. *Peduncles* drooping, about the length of the

leaves, one-flowered, provided with two or three triangular, acute, inflated *bracts*. *Flowers* two-thirds of an inch long, of a bright yellow colour, barred and spotted on the lower portion of the lip with red. *Sepals* oblong, apiculate, bent backwards. *Petals* ovate, obtuse, stretching a little forwards. *Lip* longer and larger than the petals, three-lobed, its posterior lobes large, upright, and curved a little at top; the middle lobe dilatate, itself divided into four unequal portions, of which the two lateral are shorter and smaller, while the middle are wider and larger, all being blunt or rounded; along its disc run several lamellæ, which are beautifully crenulated, and at its extreme base there is an hexagonal callosity about the size of a pin's head. *Wings of column* short and rounded.—*J. B.*

Fig. 1. Front view of flower. 2. Side view of ditto. 3. Column.
4. Pollen-masses :—*magnified*.

SEMPERVIVUM PAIVÆ.

Baron Paiva's House-leek.

Nat. Ord. CRASSULACEÆ.—DODECANDRIA DODECAGYNIA.

Gen. Char. Calyx 6-∞-fidus v. -partitus. Petala 6-∞, libera v. basi connata filamentisque adhærentia, oblonga v. lanceolata, acuta v. acuminata. Stamina numero petalis duplo v. rarius æqualia, libera, filamentis filiformibus; antheræ didymæ v. ovatæ. Squamulæ variæ. Ovarii carpella tot quot petala, libera v. basi v. ad medium in calycis tubum immersa, in stylos filiformes attenuata, stigmatibus capitellatis; ovula in carpellis ∞, placentis marginalibus v. intrusis affixa. Folliculi ∞-spermi.—Herbæ v. suffrutices, carnosæ, acaules v. caulescentes. Folia alterna, sæpe revoluta. Cymæ paniculatæ. Flores albi rosei virides flavi v. purpurascens.

SEMPERVIVUM *Paivæ*; "fruticosum, glaucum, ramis subelongatis debilibus declinatis v. decumbentibus subtortuosis nudis, sursum laxe rosulato-foliosis, foliis spathulatis abrupte acutis v. mucronulatis, ramorum steriliū distincte serrulatim cartilagineo-ciliolatis, floralium integerimis, novellis floralibusque minute velutinis, ceteris glaberrimis, panicula late breviterque thyrsoidæ laxa omnino glanduloso-velutina, floribus 7-8-meris, petalis (virentibus) ligulato-acuminatis, apicibus recurvis unilateraliter contortis filamentisque deorsum incrassatis glanduloso-velutinis, antheris cordato-globosis muticis, glandulis hypogynis glabris transverse quadrato-oblongis rectilineari-truncatis integerrimis." *Lowe.*

SEMPERVIVUM *Paivæ*. *Lowe, mss.*

This hitherto undescribed species of House-leek was brought to the Royal Gardens by my friend the Rev. R. T. Lowe, M.A., F.L.S., who discovered it in the island of Gomera, one of the Canary group, and whose excellent description I herewith append:—

"I met with several plants of this *Sempervivum* (*Æonium*, Webb) in April, 1861, on walls a mile or two above the church in the valley of Hermigua, on the north side of Gomera, on my second few days' visit to that long-neglected island, so interesting in the grandeur of its scenery and richness of botanical productions. They were not in flower; but perceiving them to differ from other Canarian species. I

AUGUST 1ST, 1866.

brought away several plants, some of which have since flowered in Madeira, under the care of Sir J. M. Moniz, and other two are now flowering with me here in England.

* The species belongs to the same group as *S. urbicum*, C. Schm., *S. ciliatum*, Willd., and *S. Haworthii*, W. B., approaching nearest the two latter and especially the last; but it is perfectly distinct from all in habit and from each in various other characters. Its name is a just tribute to the unwearied zeal of the Barão do Castello de Paiva in promoting, both personally and by kind offices towards others, the investigation of the botany, malacology, and entomology of the Canaries.

* DESCR. A straggling tortuously branched low shrub, with a short erect stem, and long weak, slender, curved or crooked, pendent ascending or declining branches, 1–2 feet long, which are naked, woody and ashy-greyish downwards, with brown leaf-scars, fleshy, glaucous and leafy upwards, emitting occasionally aerial, brown, fibrous, pendent roots. *Leaves* highly glaucous, 1–2½ inches long, ½–1 inch broad, those of the flowering branches thick and fleshy, of the barren thinner and finely serrulato-ciliate, the cilia white, short, acute, irregular and obsolete or wholly evanescent on the older leaves and flowering branches. *Panicle* terminal, ascendent erect, 6–8 inches long and broad, minutely but thickly glandular-pubescent and slightly viscid, leafy; *branches* subelongate, erecto-patent, leafy, ending in forked cymes. *Inflorescence* and *flowers* (except the squamulæ and lower halves of ovaries) glandular-pubescent. *Flowers* rather large, green, scentless, pyramidally conoidal in bud, ½ inch long, in flower ¾ inch broad. *Sepals* bright-green, fleshy, ovate, ⅙ inch long. *Petals* three times the length of the sepals, 1½ inch broad, narrow-acuminate, erecto-patent, tips recurved and spirally curved or twisted to one side both in bud and flower, pale-green, white downwards. *Stamens* erect or subincurved and connivent, not above half the length of the petals; *filaments* white, gradually thickened and obcompressed downwards; *anthers* pale or whitish, retuse, not apiculate. *Scales* incisor-tooth-like, short, transversely oblong, nearly twice as broad as high, rectilinearly truncate, with a broad, flat edge, perfectly entire, smooth, and shining. *Lower half of ovaries* smooth, shining, *upper* glandular-pubescent; *styles* erect, glandular-pubescent; *stigmas* recurvedly patent; the *whole* white, forming an urceolate or inverted funnel-shaped column, ⅔–¾ the length of the stamens.”—*R. T. Lowe.*

SANCHEZIA NOBILIS.

Brilliant-flowered Sanchezia.

Nat. Ord. ACANTHACEÆ.—DIANDRIA MONOGYNIA.

Gen. Char. Calycis foliola 5, spathulata, inæqualia. Corollæ tubus longe exsertus, tubulosus, ore coarctato, limbi lobis 5 parvis late ovatis revolutis. Stamina fertilia 2, exserta, filamentis retrorsum pilosis; antheræ 2-loculares, loculis parallelis hirsutis basi breviter calcaratis; stamina 2 rudimentaria subuliformia inter bases fertilium. Ovarium 2-loculare; stylus filiformis, exsertus, apice curvus, 2-fidus; ovula in loculis 4, adscendentia. Fructus ignotus.—Herbæ Peruvianæ robustæ, ramosæ, ramis 4-gonis. Folia petiolata, petiolis basi connatis, integerrimis v. dentatis. Flores speciosi, in cymas paniculatas confertas late bracteatas terminales dispositi.

SANCHEZIA *nobilis*; foliis ramisque glaberrimis obovato-oblongis lanceolatisve acuminatis obtuse dentatis in petiolum latum attenuatis, bracteis magnis late ovatis concavis puberulis rubris, corolla 2-pollicari fere glabra crocea.

A most beautiful and highly-interesting plant, discovered by Messrs. Veitch's indefatigable collector Mr. Pearce, in Ecuador, in 1863, and which flowered in the Royal Exotic Nurseries, Chelsea, in June last. It certainly belongs to the little-known genus *Sanchezia* of Ruiz and Pavon, with the original description of which it agrees in all respects except the structure of the ovary. This, according to Ruiz and Pavon's description and figure, is that of a Scrophularineous plant, whilst our plant shows it to be truly Acanthaceous. This is not the only instance in which the usually accurate authors of the 'Flora Peruviana' have referred the fruit of one plant to the flower of another, a mistake which could hardly have occurred in this instance had the Natural System been invented when the genus was described, for the two species figured in the 'Flora Peruviana' are so obviously Acanthaceous in habit and floral characters, that it is almost inconceivable that they should belong to any other Natural Order.

Sanchezia nobilis differs from both the species hitherto de-

scribed in its very much greater size, and from *S. oblonga*, which it closely resembles in foliage, and in the almost glabrous corolla; its affinity with *Ancylogyne* (Tab. nostr. 5588) is obvious, and so close, that there can be little doubt but that the name *Ancylogyne* should be suppressed.

DESCR. A stout, erect, herbaceous plant, altogether glabrous except the inflorescence, which is faintly downy. *Stems* obtusely tetragonous. *Leaves* three to nine inches long, oblong-obovate or oblong-lanceolate, acuminate, obtusely toothed, narrowed into short, broad-winged petioles, that are connate at the base. *Inflorescence* erect, terminal, of numerous opposite bracteate fascicles of flowers, forming together a dense panicle, most brilliantly coloured, the branches deep-purple, the bracts bright red, and the corollas yellow. *Bracts* an inch to an inch and a half long, orbicular, ovate, obtuse, very concave, each pair enclosing eight or ten flowers and reaching halfway up the corolla tube. *Calyx-lobes* not half as long as the corolla, obtuse. *Corolla* two inches long by one-third in diameter, cylindrical, nearly glabrous, slightly curved, contracted at the mouth.—*J. D. H.*

Fig. 1. Flower. 2. Base of corolla, cut open, and stamens. 3. Ovary. 4. Longitudinal, and 5. Transverse section of ditto:—*all but Fig. 1 magnified.*

SACCOLABIUM AMPULLACEUM.

Bottle-lipped Saccolabium.

Nat. Ord. ORCHIDÆ.—GYNANDRIA MONANDRIA.

Gen. Char. (Vide supra, TAB. 5326.)

SACCOLABIUM *ampullaceum*; caule brevissimo, foliis crassissimis distichis ligulatis canaliculatis apice truncatis dentatis, racemis oblongis erectis foliis multo brevioribus, sepalis petalisque ovatis patentibus subæqualibus, labello angusto acuminato concavo calcare compresso pendulo duplo brevior. *Lindl.*

SACCOLABIUM *ampullaceum*. *Lindl. Sert. Orch. t. 17. Paxt. Mag. v. 13. t. 49.*

ÆRIDES *ampullaceum*. *Roxb. Fl. Ind. v. 3. p. 476.*

This is a neat, compact, and beautiful plant, it is likewise perfectly distinct from any other species of the genus at present known. It was figured so long ago as 1838 by Dr. Lindley, in his 'Sertum,' but his plate was copied from a drawing in the possession of the East India Company. A few living specimens found their way shortly afterwards into collections,—one of which, that flowered at Chatsworth, was figured in 'Paxton's Magazine,'—but the plant continued exceedingly rare until Messrs. H. Low and Co. received a supply from one of their Indian collectors. The accompanying figure was taken from a plant that flowered at Kew in May.

Æ. ampullaceum is a native of Sylhet, where it was found growing upon trees by some of Dr. Roxburgh's correspondents. Dr. Wallich met with it near Bemphedy, and it was also gathered in Sikkim by Drs. Hooker and Thomson. Its time of flowering, both in India and our gardens, is the spring. It grows slowly, rarely producing offsets, but is easily managed. Nothing can be more charming than its bright rose-coloured racemes, which are freely produced and last long in beauty.

DESCR. A dwarf plant, not rising more than six inches

AUGUST 1ST, 1866.

high, usually with a simple stem. *Leaves* barely a span long, distichous, very thick, ligulate, with the edges nearly parallel, carinate beneath, channelled above, truncated and irregularly toothed at the apex. *Flowers* of a deep rose-colour, growing in erect, oblong, axillary *racemes*, which are much shorter than the leaves. *Flower-stalks* and *ovary* together about an inch long. *Sepals* and *petals* nearly equal, ovate, spread out flat and beautifully veined. *Lip* linear, falcate, twice as short as the sepals, channelled, acute, rather turned upwards at the point, with a compressed, straight, slender spur, nearly as long as the flower-stalk; at the base of the lip are two teeth pressed close to the base of the column, and parallel with it. *Column* short, with a small hollowed stigma in front.—*J. B.*

Fig. 1. Side view of flower :—*magnified.*

THE AERIAL CHAIR.

A wonderful application of the principle of oscillation. Entirely "self-acting," the operator requiring no assistance whatever.

HARLES POMEROY BUTTON, Patentee, Nos. 142 and 143, Cheapside, London.

HEATING BY HOT WATER.

It is now generally admitted that Buildings of any kind can be more effectually warmed by Hot Water than by any other means; but as so much depends on the way in which the Apparatus is fixed, it is of the greatest importance that it be done by experienced men.

J. JONES & SONS are prepared to estimate for Warming, to any extent—

GREENHOUSES.	CHURCHES.	FACTORIES.
CONSERVATORIES.	CHAPELS.	OFFICES.
VINERIES.	SCHOOLS.	WORKSHOPS.
HOTHOUSES.	READING ROOMS.	WAREHOUSES.
FORCING PITS.	LECTURE ROOMS.	DRYING ROOMS.
PEACH HOUSES.	BILLIARD ROOMS.	CELLARS.
PINE STOVES.	HALLS AND PASSAGES.	COACH-HOUSES.
ORCHARD HOUSES.	BATHS.	HARNESS ROOMS.

J. JONES & SONS' Apparatus is simple in construction, moderate in cost, and economical in working.

It is equally available for the Amateur's Greenhouse, or the longest range of Forcing Houses; for the smallest Chapel or the largest Church; for Private Offices, or those of Public Companies.

It is admirably adapted for Dwelling Houses, as coils of pipes can be placed in any part, for warming the various rooms. One or more Baths may be heated from the same boiler, and a constant supply of hot water obtained in any part of the house.

For Warehouses and Workshops this system of heating is unsurpassed, as it is not only the means of keeping goods dry, but it also adds to the comfort of the workpeople, and thereby effects a saving in labour.

J. JONES & SONS recommend boilers of all kinds being set in brickwork, if possible; but portable boilers can be supplied, if required.

MATERIALS.—All Materials supplied will be of the best quality.

DELIVERY.—Boilers of various kinds, and pipes and connections, being always in stock, can, at a very short notice, be sent to any part.

FIXING.—The Fixing will be done by experienced men, fully capable of finishing properly any work they may undertake; and J. JONES & SONS are prepared to guarantee the effectual working of any apparatus fixed by their own men.

ESTIMATES.—Plans and Estimates will be sent on application.

J. JONES & SONS,
IRON MERCHANTS AND HORTICULTURAL ENGINEERS,

LONDON:
LOVELL REEVE & CO., 5, HENRIETTA STREET, COVENT GARDEN.
1866.

HYACINTHS AND OTHER FLOWER ROOTS.

JOHN FRASER begs to intimate that his CATALOGUE of HYACINTHS, NARCISSI, TULIPS, etc., is now published, and may be had on application. A DESCRIPTIVE LIST of the best kinds of STRAWBERRIES is also ready for distribution.

THE NURSERIES, LEA BRIDGE ROAD, LONDON, N.E.

HYACINTHS, TULIPS, AND OTHER DUTCH BULBS,

IMPORTED BY

W.M. CUTBUSH and SON.

The DESCRIPTIVE PRICED CATALOGUE, with numerous cultural remarks, Post-free on application.

Early Orders earnestly solicited, as the supply cannot possibly meet the increasing demand.

HIGHGATE NURSERIES, LONDON, N.

DUTCH FLOWER ROOTS,

JAMES VEITCH & SONS,
ROYAL EXOTIC NURSERY, CHELSEA, S.W.,

BEG TO ANNOUNCE THAT THEY HAVE RECEIVED THEIR

ANNUAL SUPPLY OF BULBOUS ROOTS FROM HOLLAND,
and are pleased to say that they are in excellent condition.

CATALOGUES are now ready, and will be forwarded post-free on application.

J. V. and Sons desire to impress upon those who patronize them the great advantage of giving them their orders early, as the successful Cultivation of Bulbs depends in a great measure upon their being planted early in the season.

DESTROY YOUR INSECT PESTS

You may easily destroy all Plant Pests,

**Red Spider,
Mealy Bug,
Thrip,**

**Green and Black Fly,
American Blight,
Ants,**

**Scale,
Mildew,**

Without injury to the most delicate Plant or Tree, by using

FOWLER'S GARDENERS' INSECTICIDE,

Pronounced by all who have used it to be far superior to any other remedy.

ONE TRIAL WILL PROVE ITS EFFICACY.

Testimonials forwarded on application.

Price 1s. 6d., 3s., 5s. 6d., and 10s. per Tin.

GEORGE & THOMAS FLOWER, NORTH STREET, BRIGHTON,

AND OF

HOOPER & CO., COVENT GARDEN MARKET, LONDON.

BOTANICAL MAGAZINE ADVERTISER.

NEW OR RARE PLANTS.

JAS. BACKHOUSE & SON

Have now ready for Distribution the following interesting Plants:—

SPARAXIS PULCHERRIMA. "This most lovely Cape bulb" was figured and described in Curtis's 'Botanical Magazine' for January of the present year. The flowers are very large (1½ inch long), bell-shaped, of a deep magenta purple! Dr. Hooker says, "A more lovely and graceful plant, from its extremely tall and slender stems, and tiers of drooping flowers, cannot well be imagined." Its value is much increased by its being easy of cultivation in a cool greenhouse, where it flowers in the winter months. Price 10s. 6d.

HABRANTHUS FULGENS. Figured in the above work, under this name, in March last, and formerly known as *Phycella* sp. nova. It was received from our collector in Chili, and is one of the most brilliant-coloured bulbous plants that we know. Dr. Hooker speaks of it as "a truly magnificent plant, sent by Messrs. Backhouse, of York, with whom it flowered in April of last year. The flowers are 4 to 5 inches across, bright scarlet, with a yellow tube, borne in clusters of five to seven on a stem." Price 10s. 6d.

MONOCHÆTUM DICRANANTHERUM. Figured in Curtis's 'Botanical Magazine,' tab. 5506, and there spoken of as "an excessively pretty plant, deserving a place in every warm greenhouse." The flowers are very abundant, and of a bright rose colour, and the habit being neat and compact, it is an invaluable acquisition for the later months of the year. Price 5s.

DIPLADENIA AMABILIS. We again call attention to this most beautiful stove shrub. During the present season it has been exhibited at the meetings of the Royal Horticultural and Royal Botanic Societies, and in both instances a First Class Certificate was received. It produces freely deep rosy-crimson flowers of large size and exquisite beauty, and being of good habit, it is an invaluable plant for home decoration or exhibition. Price 3s. 6d. and 5s. each.

ASPENIUM ALTERNANS. A new and possibly hardy Fern of great interest, from the high regions of Northern India and Chinese Tartary (?), inhabiting stony woods at 6000 feet elevation. Fronds ovate, sinuated, tufted, very opaque, about 9 inches long, bearing a general resemblance to *Ceterach Officinatum*. 7s. 6d.

ASPENIUM INÆQUALE VAR. Elegant highly-divided fronds, viviparous, and extremely interesting. First Class Certificate R.H.S. 3s. 6d. to 42s.

PELLÆA WRIGHTIANA. This is a very distinct and striking species, with glaucous pinnate fronds, often subdivided in the lower series. First Class Certificate. 3s. 6d. to 10s. 6d.

INDIGOFERA FLORIBUNDA. Although this plant has been introduced for some years, its great merit seems to be but little known. Not only is it one of the most beautiful of summer-flowering greenhouse plants, but equally beautiful as a hardy shrub. A plant has stood out in our Nursery for several years, living through the extreme frost of 1860. It is now a bush 3 feet high and 4 feet through, and last summer was covered with a sheet of bright rose-coloured pea-shaped flowers, exceedingly charming. As a greenhouse plant it is very effective, the neat Acacia-like foliage corresponding admirably with the profusion of bright lively flowers; but it is as a virtually new and most effective hardy plant that we now call attention to it. Nice plants in pots, 3s. 6d. each; larger, 5s. to 10s. 6d.

SCHIZOSTYLIS COCCINEA. Having prepared a large stock of this much-admired plant, we can offer them, of blooming strength, at 12s. per dozen. Flowering continuously through the autumn and winter months, its brilliant crimson flowers render it a chief ornament of any greenhouse, and amongst cut flowers it is most attractive.

HEPATICÆ ANGULOSA. This magnificent new species is fully twice the size of the Common Blue Hepatica in all its parts. Flowers sky-blue, frequently as large as a crown-piece. Ought to be in every garden. 3s. 6d.

SAXIFRAGA LONGIFOLIA VERA. It has been our good fortune to receive several plants of this Queen of Saxifrages, as it may be truly termed, from its size and beauty combined. Its flowers form massive white plumes, 1½ to 2 feet long, and 4 to 6 inches thick, rising from rosettes 6 or 8 inches across, of very narrow, glaucous (almost silvery) leaves, closely imbricated. Quite different from the plant ordinarily grown under this name, as received from Continental Nurseries, 2s. 6d. to 5s.

PRIMULA PURPUREA. This fine Himalayan species resembles *P. denticulata* in appearance, but has very different leaves, a more robust habit, and larger and finer heads of flower. 2s. 6d. each; 24s. per dozen.

JAS. BACKHOUSE & SON regret to say that they will be unable, from unexpected causes, to send out Plants of *LOBELIA CORNOPIFOLIA* this season. Orders received will be executed as soon as possible.

A Catalogue of Bulbs, including Lists of Strawberries and useful Winter Decorative Plants, is just published, and will be forwarded upon application.

WORKS ON BOTANY.

- BENTHAM'S ILLUSTRATED BRITISH FLORA**; a Description (with a Wood-Engraving, including dissections, of each species) of the Flowering Plants and Ferns indigenous to, or naturalized in, the British Isles. 2 vols. 8vo. 1295 Wood-Engravings, from Original Drawings by W. FITCH. £3. 10s.
- BENTHAM'S HANDBOOK of the BRITISH FLORA**; a Description of the Flowering Plants and Ferns indigenous to, or naturalized in, the British Isles. For the Use of Beginners and Amateurs. 12s.
- MOORE'S FIELD BOTANIST'S COMPANION**; a Familiar Account, in the Four Seasons, of the most common of the Wild Flowering Plants of the British Isles. 24 Coloured Plates, by W. FITCH. 21s.
- BENTHAM'S OUTLINES of ELEMENTARY BOTANY**, as Introductory to Local Floras. 2s. 6d.
- HOOKER'S FLORA of NEW ZEALAND**; a Systematic Description of the Native Plants of New Zealand, and the Chatham, Kermadec's, Lord Auckland's, Campbell's, and Macquarrie's Islands. Part I. 16s. Published under the auspices of the Government of that colony. [Part II in the Press.
- BENTHAM'S FLORA AUSTRALIENSIS**; a Description of the Plants of the Australian Territory. Vols. I. and II., 20s. each. Published under the auspices of the several Governments of Australia. [Vol. III. nearly ready.
- GRISEBACH'S FLORA of the BRITISH WEST INDIAN ISLANDS**. 37s. 6d. Published under the auspices of the Secretary of State for the Colonies.
- BENTHAM'S FLORA HONGKONGENSIS**; a Description of the Flowering Plants and Ferns of the Island of Hongkong. With a Map of the Island. 16s. Published under the authority of Her Majesty's Secretary of State for the Colonies.
- HOOKER'S FLORA of TASMANIA**; Royal 4to, 2 vols. 200 Coloured Plates. £17. 10s. Published under the authority of the Lords Commissioners of the Admiralty.
- HOOKER on the FLORA of AUSTRALIA**, its Origin, Affinities, and Distribution. 10s.
- HOOKER'S RHODODENDRONS of SIKKIM-HIMALAYA**; being an account, Botanical and Geographical, of the Rhododendrons recently discovered in the Mountains of Eastern Himalaya, from Drawings and Descriptions made on the spot, by Dr. J. D. HOOKER, F.R.S. Folio, 30 Coloured Plates. £3. 16s.
- MOGGRIDGE'S FLORA of MENTONE**. Royal 8vo. Parts I. and II., each, 25 Coloured Plates, 15s.
- WOODS'S TOURIST'S FLORA**; Descriptive Catalogue of the Flowering Plants and Ferns of the British Islands, France, Germany, Switzerland, Italy, and the Italian Islands. 18s.
- HOOKER'S BRITISH FERNS**; Figures and Descriptions, with Analyses of the Fructification and Venation, of the Ferns of Great Britain and Ireland, systematically arranged. Royal 8vo, 66 Coloured Plates, £2. 2s.
- HOOKER'S GARDEN FERNS**; Figures and Descriptions, with Analyses of the Fructification and Venation, of a Selection of Exotic Ferns, adapted for Cultivation in the Garden, Hothouse and Conservatory. Royal 8vo, 64 Coloured Plates, £2. 2s.
- HOOKER'S FILICES EXOTICÆ**; Figures and Descriptions of Exotic Ferns, chiefly of such as cultivated in the Royal Gardens of Kew. Royal 8vo, 100 Coloured Plates, £6. 11s.
- CHANTER'S FERNY COMBES**; a Ramble after Ferns in the Glens and Valleys of Devonshire. Second Edition. 8 Coloured Plates and a Map of the County, 5s.
- BERKELEY'S BRITISH MOSSES**, containing all that are known to be Natives of the British Isles. 24 Coloured Plates, 21s.
- BERKELEY'S BRITISH FUNGOLOGIA** containing Characters of above a Thousand Species of Fungi, and a Complete List of all that have been described as Natives of the British Isles. 24 Coloured Plates, 30s.
- BADHAM'S ESCULENT FUNGUSES of ENGLAND**, containing an Account of their Classification, History, Uses, Characters, Development, Structure, Nutritious Properties, Modes of Cooking and Preserving, etc. New Edition. Edited by F. CUBREY, F.R.S. 12 Coloured Plates, 12s.
- HUSSEY'S BRITISH MYCOLOGY**, comprising Figures and Descriptions of the Funguses of interest and novelty indigenous to Britain. Royal 8vo, First Series, 90 Coloured Plates, £7. 12s. 6d.; Second Series, 50 Coloured Plates, £4. 10s.
- HARVEY'S PHYCOLOGIA BRITANNICA** or, History of British Seaweeds, containing Coloured Figures, Generic and Specific Characters, Synonymy, and Descriptions of all the Species of Algæ inhabiting the Shores of the British Islands. Royal 8vo, 4 vols. 360 Coloured Plates, £6. 6s.
- HARVEY'S SYNOPSIS of BRITISH SEA-WEEDS**. 5s.
- HARVEY'S PHYCOLOGIA AUSTRALICA** a History of Australian Seaweeds, comprising Coloured Figures and Descriptions of the more characteristic Marine Algæ of the South Hemisphere. Royal 8vo, 2 vols., 300 Coloured Plates, £7. 13s.
- HARVEY'S NEREIS AUSTRALIS**; or, History of the Algæ of the Southern Ocean. Imperial 8vo, 50 Coloured Plates, £2. 2s.

RHODODENDRON FORTUNEI.

Mr. Fortune's Rhododendron.

Nat. Ord. ERICÆ.—PENTANDRIA MONOGYNIA.

Gen. Char. (Vide supra, TAB. 4336.)

RHODODENDRON *Fortunei*; glaberrima, nisi ramulis foliis junioribus pedunculis calycibusque glanduloso-pubescentibus, ramulis robustis, foliis sublonge crasse petiolatis oblongis lineari-oblongisve acutis supra viridibus subtus pallidioribus, capitulis laxifloris, floribus amplis pallide roseis, calycis limbo parvo disciformi, corolla breviter campanulata, limbo amplo patente sub-7-lobo, lobis subundulatis, staminibus ad 14, ovario glanduloso 10-loculari.

RHODODENDRON *Fortunei*. *Lindley in Gard. Chron.* 1859, *pl.* 868.

The centre of the Rhododendron area is certainly Eastern Asia, from both the tropical and temperate regions of which continent new species are constantly turning up; hitherto, however, we have very few from China or Japan. The present very beautiful one was discovered by Mr. Fortune in the Chinese province of Chekiang, on mountains 3000 feet high. Its discoverer sent seeds to Mr. Glendining at Chiswick, who raised plants that proved perfectly hardy in the open air, and from which Dr. Lindley originally described the species. For the specimen here figured I am indebted to Mr. Luscombe, of King's Bridge, who flowered it in May of the present year. In the foliage and form of the flower and structure of the calyx and ovary, as also in its fragrant odour, it is closely allied to *R. Griffithianum* and its variety *Aucklandii*, but excels both these in the lovely rose-colour of the corolla.

DESCR. A stout *shrub*, glabrous everywhere except on the young leaves and leaf-scales, peduncles, calyx, and ovary. *Branches* very stout, terete, pale-green. *Leaves* five to seven inches long, oblong or linear-oblong, acute, bright-green but

opaque on the upper surface, glaucous below, acute, rounded or cordate at the base; *petiole* half to one inch long, red-brown. Head of eight to ten loosely-clustered, rather pendulous flowers. *Peduncles* half to one inch long. *Calyx* small, discoid. *Corolla* shortly campanulate, three to three and a half inches in diameter, seven-cleft, the lobes rounded, fragrant, of a fine pale-rose colour. *Stamens* fourteen; *filaments* slender; *anthers* small. *Ovary* glandular-pubescent, ten-celled.—*J. D. H.*

Fig. 1. Stamen. 2. Calyx and pistil. 3. Transverse section of ovary:

Vincent Brooks, Imp

ILEX LATIFOLIA.

Broad-leaved Japanese Holly.

Nat. Ord. ILLICINEÆ.—TETRANDRIA MONOGYNIA.

Gen. Char. Flores sæpius hermaphroditi. Calyx parvus, persistens, 4-5-fidus. Corolla rotata, 4- rarius 5-6-partita, laciniis obtusis. Stamina lobis corollæ isomera, tubo brevi ejus leviter adhærentia; antheræ oblongæ. Ovarium sessile, 4-6- rarius 7-8-loculare; stylus brevis v. 0, stigmatibus tot quot ovarii loculis; ovula in loculis 1 v. 2, collateralia. Drupa globosa, 4-8-pyrena, v. putamine 4-8-loculari.—Arbores v. frutices. Folia alterna, sæpe nitida, integerrima v. rarius dentata v. spinosa. Pedunculi axillares. Flores albi.

ILEX latifolia; fruticosa, glaberrima, ramulis robustis angulatis, foliis crasse petiolatis coriaceis oblongo-lanceolatis oblongisve obtusis acutis v. acuminatis planis serratis basi cuneatis rotundatis v. angulatis, superne læte viridibus nitidis, floribus in capitula axillaria dense congestis pallide viridibus, calycis lobis rotundatis, corollæ lobis late oblongis obtusis, filamentis filiformi-subulatis, baccis globosis 4-pyrenis.

ILEX latifolia. Thunb. *Fl. Jap.* p. 79. De Cand. *Prodr.* v. 2. p. 16.

This noble Holly, though often supposed to be one of the later importations from Japan, has long been cultivated in the Royal Gardens, where it has stood without protection, trained against a wall, for many years, and quite uninjured. In the open air I have not observed it flowering, but it flowers abundantly in the Temperate House during June and July. In other places near London and elsewhere, it is cultivated as a standard; and though I have never seen it luxuriant under such circumstances in the east of England, it no doubt succeeds perfectly in the west. It is a beautiful shrub, of a paler green than the common Holly, with similar berries, and the flowers are produced in round heads of a pale yellow-green colour. As a species it is extremely closely allied to an arborescent Himalayan species that I have found in the Sikkim province, which has however large berries containing a bony three to four-celled nut, which does not, as in this, break up into four nucules. I have native specimens

of *I. latifolia*, collected near Nagasaki by the late Mr. Oldham, collector for the Royal Gardens, from whose seeds the plant here figured was raised.

DESCR. A tall evergreen glossy bush. *Branches* very stout, angular, grooved when dry. *Leaves* three to seven inches long, oblong linear-oblong or oblong-lanceolate, acute, obtuse or acuminate, serrate, bright glossy-green above, paler and opaque below; *nerves* numerous, obscure when fresh. *Flowers* probably dioecious, in axillary, dense, subglobose, green clusters an inch to an inch and a half in diameter. *Calyx* with four short rounded lobes. *Corolla* cleft nearly to the base into four broadly oblong, obtuse, concave, pale-green lobes. *Stamens* usually larger than the corolla; *filaments* filiform-subulate. *Berries* half to two-thirds of an inch in diameter, bright-red, globose or a little depressed, with a large persistent four-lobed stigma, containing four bony nuts.—*J. D. H.*

Fig. 1. Flower. 2. The same, open 3. Calyx :—*all magnified.*

HUNTLEYA CERINA.

Waxy Huntleya.

Nat. Ord. ORCHIDÆ.—GYNANDRIA MONANDRIA.

HUNTLEYA *cerina*; pseudobulbis nullis, foliis cuneato-oblongis acutis pedalis, pedunculis validis unifloris 2- vel 3-plo longioribus, sepalis petalisque subæqualibus subrotundis concavis carnosis, labello ovato convexo retuso cristâ crassâ semicirculari truncatâ plicatâ, columnâ apice nudâ.

HUNTLEYA *cerina*. *Lindl. in Part. Flow. Gar. v. 3. p. 535, cum xylo.*

PESCATORIA *cerina*. *Rehb. fil. Xenia, t. 65.*

The first notice of this beautiful plant appeared in the third volume of Paxton's 'Flower-Garden' (1852-3), where a description by Dr. Lindley and a woodcut of the flower are given. Dr. Lindley had no hesitation in referring it to the same genus as a plant he had previously described in his 'Sertum' under the name of *Huntleya violacea*, although its column was clavate, while in the latter species that member is remarkably short and thick. But since in other parts of its structure, as well as in habit, it agrees perfectly with the original type of the genus,* I have no hesitation in retaining Dr. Lindley's name, although another high authority, Professor Reichenbach, has figured it in his 'Xenia' under the name of *Pescatoria cerina*.

The plant was originally discovered by Warszewicz in Veragua, on the volcano of Chiriqui, at an elevation of

* It is to be noted that Dr. Lindley never drew up any character of this genus. Professor Reichenbach founded his genus *Bollea* upon the plant which Lindley had already described as *Huntleya violacea*, the latter name ought therefore, if possible, to be retained. Dr. Lindley's second species—*H. meleagris*—which has the habit of a *Vanda* whatever it may be, is certainly no *Huntleya*, neither is it a *Batemannia*, to which genus Reichenbach has referred it. It may possibly be a *Wailesia*, of which it has all the habit; but the whole subject is one of extreme difficulty, and awaits further examination so soon as more extensive materials shall have been accumulated.

8000 feet. Mr. Rucker was the first to flower it, and indeed was almost its sole possessor, until some recent importations made the plant more plentiful. Mr. Fitch's figure was obtained from a plant exhibited, in beautiful condition, by Messrs. Veitch at one of the Tuesday meetings of the Royal Horticultural Society at South Kensington in June last. It has also flowered at Knypersley, where, although the flowers themselves were larger, the flower-stems were much shorter than those of Messrs. Veitch's specimen; those in Reichenbach's figure are twice the length of either. I have also observed considerable variations in the form of the lip and of the sepals and petals, especially as regards the relative size of the two last.

H. cerina grows slowly, but is easily managed in any house that suits the *Trichopilias*, many species of which are found in the same district with itself. Its flowers are of very long duration.

DESCR. A bulbless *epiphyte*, producing tufts of four or five cuneate-oblong sharp-pointed leaves, which are about a foot long. *Peduncles* one-flowered, from two to six inches long, coming up at the base of the leaves, very strong. *Sepals* and *petals* generally nearly equal, the latter more or less unguiculate, an inch and a half long, nearly round, concave, fleshy, of a pale straw-colour. *Lip* yellow, unguiculate, puckered, ovate, convex, retused, bearing at the foot of its disk a very thick semicircular ruff, composed of numerous plaits and folds. *Column* sometimes with a violet or brown blotch near its base, clavate, but with no expansion or hood over the anther.—*J. B.*

Fig. 1. Lip, spread out flat. 2. Pollen-masses:—*magnified*.

NIEREMBERGIA VEITCHII.

Mr. Veitch's Nierembergia.

Nat. Ord. SOLANÆ.—PENTANDRIA DIGYNIA.

Gen. Char. Calyx tubulosus v. subcampanulatus, persistens, arcuatus, 5-fidus, laciniis subæqualibus. Corollæ tubus gracilis, elongatus; limbus infundibuliformis v. campanulatus, sæpe plicatus, 5-lobus. Stamina 5, fauce corolla inserta, inæquilonga, filamentis conniventibus v. connatis; antheræ sub stigmatibus dehiscentes. Ovarium 2-loculare; stylus simplex, stigmatibus 2-lamellato; ovula plurima. Capsula calyce persistente tecta, 2-locularis, septicide 2-valvis. Semina plurima, minima.—Herbæ v. suffrutices Austro-Americanæ. Folia opposita, alterna v. subverticillata, integerrima. Flores extra-axillares v. oppositifolia, solitaria; corolla alba v. subviolacea.

NIEREMBERGIA *Veitchii*; glaberrima v. tenuiter pubescens, caulibus gracilibus prostratis ramosis, foliis plerisque oppositis lineari- v. obovato-oblongis v. spathulatis, breviter petiolatis subacutis, floribus breviter pedicellatis, calycis campanulati lobis magnis patenti-recurvis lineari-oblongis acutis, corollæ tubo filiformi, limbo lato campanulato, lobis latis subacutis.

NIEREMBERGIA *Veitchii*. *Berkeley, mss.*

A lovely little plant, imported by Messrs. Veitch from Tucuman, in South America. Though we find nothing exactly like it either described or in the Herbarium, the species of this genus are so variable, that I suspect it will prove to be a form of the Chilian *N. repens*, R. et P., or Peruvian *N. spathulata*, H.B.K., if indeed these be not all varieties of one widely-diffused and multiform plant, which differs in the amount of pubescence, the form and length of the leaves and their petioles, their opposite or alternate insertion, the length of the peduncles calyx-lobes and corolla-tube, and in the size of the flower. In the present species the lower leaves are alternate, and all the rest opposite, the petioles and pedicels short, and the calyx-lobes rather broad.

DESCR. An elegant, prostrate, branched, slender, glabrous, or very sparingly pubescent herb. Stems eight inches to a foot long, branches almost filiform, terete. Leaves half to

one inch long, lowest alternate, the rest opposite, varying from linear above to broadly spatulate below, petiole short, acute or obtuse. *Pedicels* longer than the petioles, a quarter of an inch long. *Calyx-tube* scarcely oblique, short, between funnel-shaped and campanulate; *lobes* linear-oblong, acute, green, spreading and recurved. *Corolla-tube* half to three-quarters of an inch long, slender, white; *limb* broadly campanulate, pale-lilac, with four spreading shallow broad lobes; each lobe with three veins. *Filaments* united into a tube, free at the base and apex. *Stigmas* broadly oblong.—*J. D. H.*

Fig. 1. Stamen and stigma. 2. Ovary and disk:—*both magnified.*

KÆMPFERIA ROSCÆANA.

Mr. Roscoe's Kæmpferia.

Nat. Ord. SCITAMINEÆ.—MONANDRIA MONOGYNIA.

Gen. Char. Calyx tubulosus, hinc fissus. Corollæ tubus elongatus, filiformis; limbi laciniæ exteriores angustæ, æquales, laterales patentes, postica fornicata, interiores multo majores; labellum planum. Filamentum breve carinatum; anthera mutica, connectivo producto. Ovarium 3-loculare; ovula plurima. Stylus filiformis, a filamento receptus; stigmatibus urceolato ciliato. Capsula 3-locularis, loculicide 3-valvis. Semina ∞ , arillata.—Herbæ Indicæ, habitu Cucumæ, bracteis sæpius 2-fariam imbricatis, rarius saccatis. Endl.

KÆMPFERIA *Roscæana*; acaulis, tuberibus fasciculatis subsessilibus oblongis, foliis horizontaliter patentibus suborbiculatis obtusis v. subacutis, marginibus minute undulatis opacis subcarnosis, superne luride viridibus colore saturatiore zonatis v. variegatis, floribus paucis sessilibus radicalibus fasciculatis erectis albis, petalis obovatis obtusis, antico profunde 2-lobo.

KÆMPFERIA *Roscæana*. Wall. in Lindl. Bot. Reg. t. 1212.

Now that the beautiful foliage of many new and little known *Scitamineæ* is bringing them into notice as objects of horticultural interest, it is important to give figures of the well-established species, of which the present is one of the oldest and most beautiful. Though belonging to the same genus as the aromatic *Galanga* and the *Zedoary*, both highly prized in Hindoo medicine, perfumery, and cookery, the present species has no sensible qualities in its root or leaves, and its only claim to notice resides in its beautifully-mottled foliage. It is a native of Burma, was discovered by the late Dr. Wallich in 1826, and sent to the Horticultural Gardens, where it first flowered in 1829. The Royal Gardens are indebted to Messrs. Veitch for the beautiful specimen here figured, which has continued flowering in a tropical stove for several weeks.

SEPTEMBER 1ST, 1866.

DESCR. *Roots* of numerous elongate, spindle-shaped, fleshy, insipid, inodorous tubers. *Stem* none. *Leaves* two, appearing together, spreading horizontally on the ground, four to five inches long, rather narrower, orbicular or orbicular-oblong, subacute, rather leathery and undulate, the margins with a slender, pale, cartilaginous, minutely-crisped border; upper surface dull, dark, opaque green, variegated, mottled, or zoned with paler green; under surface dirty-greenish, inclining to reddish. *Flowers* fascicled, sessile, one opening at a time, pure white, four about one inch in diameter, inodorous. *Bracts* lanceolate, hyaline. *Calyx* short, subcylindric, oblique, slender, glabrous. *Tube of corolla* cylindric, one and a half inch long; *outer segments* linear, acute; *inner* spreading horizontally, obovate, obtuse, anterior deeply 2-lobed; *lobes* obtuse. *Anther* linear-oblong; connective unguiculate. *Stigma* cuneate, 2-lobed.—*J. D. H.*

Fig. 1. Flower. 2. The same, with anterior petal removed. 3. Anther and stigma:—*all magnified.*

ORCHIS MACULATA SUPERBA.

OSBORN AND SONS are now taking orders for this beautiful hardy TERRESTRIAL ORCHID, for which a First-class Certificate was awarded on the 19th of June by the Floral Committee of the Royal Horticultural Society. It is of vigorous habit, 1½ to 2 feet high, has leaves transversely marked with very dark spots, and a dense spike of spotted rose-coloured flowers 6 inches long. Price 5s. each, to be delivered in autumn.

FULHAM NURSERY, LONDON, S.W.

NEW WORKS ON ORCHIDS.

Part III. now ready, Royal 4to, Ten Coloured Plates, 10s. 6d.,

SECOND CENTURY OF ORCHIDACEOUS PLANTS,

selected from the subjects published in 'Curtis's Botanical Magazine' since the issue of the 'First Century.'

EDITED BY JAMES BATEMAN, Esq., F.R.S. & L.S.,

Author of 'A Monograph of Odontoglossum,' 'The Orchidaceæ of Mexico and Guatemala,' etc.

To be completed in Ten Parts.

Contents of Part III.

LISSOCHILUS HORSFALLII.
DENDROBIUM INFUNDIBULUM.
CYPRIPEDIUM HOOKERÆ.
DENDROBIUM CHRYSOTOXUM.
VANDA SUAVIS.

DENDROBIUM PARISHII.
WARSEWIZELLA QUADRATA.
LÆLIA PRÆSTANS.

Author of 'The Orchidaceæ of Mexico and Guatemala.'

Woodcuts, 1s.

WELL REEVE & CO., 5, HENRIETTA STREET, COVENT GARDEN.

HEATING BY HOT WATER.

It is now generally admitted that Buildings of any kind can be more effectually warmed by Hot Water than by any other means; but as so much depends on the way in which the Apparatus is fixed, it is of the greatest importance that it be done by experienced men.

J. JONES & SONS are prepared to estimate for Warming, to any extent—

GREENHOUSES.	CHURCHES.	FACTORIES.
CONSERVATORIES.	CHAPELS.	OFFICES.
VINERIES.	SCHOOLS.	WORKSHOPS.
HOTHOUSES.	READING ROOMS.	WAREHOUSES.
FORCING PITS.	LECTURE ROOMS.	DRYING ROOMS.
PEACH HOUSES.	BILLIARD ROOMS.	CELLARS.
PINE STOVES.	HALLS AND PASSAGES.	COACH-HOUSES.
ORCHARD HOUSES.	BATHS.	HARNESS ROOMS.

J. JONES & SONS' Apparatus is simple in construction, moderate in cost, and economical in working.

It is equally available for the Amateur's Greenhouse, or the longest range of Forcing Houses; for the smallest Chapel or the largest Church; for Private Offices, or those of Public Companies.

It is admirably adapted for Dwelling Houses, as coils of pipes can be placed in any part, for warming the various rooms. One or more Baths may be heated from the same boiler, and a constant supply of hot water obtained in any part of the house.

For Warehouses and Workshops this system of heating is unsurpassed, as it is not only the means of keeping goods dry, but it also adds to the comfort of the workpeople, and thereby effects a saving in labour.

J. JONES & SONS recommend boilers of all kinds being set in brickwork, if possible; but portable boilers can be supplied, if required.

MATERIALS.—All Materials supplied will be of the best quality.

DELIVERY.—Boilers of various kinds, and pipes and connections, being always in stock, can, at a very short notice, be sent to any part.

FIXING.—The Fixing will be done by experienced men, fully capable of finishing properly any work they may undertake; and J. JONES & SONS are prepared to guarantee the effectual working of any apparatus fixed by their own men.

ESTIMATES.—Plans and Estimates will be sent on application.

NEW EDITION OF BENTHAM'S HANDBOOK OF THE BRITISH FLORA
NOW READY.

HANDBOOK OF THE BRITISH FLORA; a Description of the Flowering Plants and Ferns indigenous to, or naturalized in, the British Isles. For the Use of Beginners and Amateurs. By **GEORGE BENTHAM, F.R.S.**, President of the Linnean Society. New Edition. Crown 8vo, 12s.

JUST PUBLISHED.

BRITISH SPIDERS; an Introduction to the Study of the ARANEIDE of Great Britain and Ireland. By **E. F. STAVELEY.** Crown 8vo, 16 Plates, drawn expressly for the work, by **TUFFEN WEST**, containing Coloured Figures of nearly 100 Species and 40 Diagrams, showing the number and position of the eyes in different Genera, and 44 Wood-Engravings, 10s. 6d.

BRITISH BEES; an Introduction to the Study of the Natural History and Economy of the Bees indigenous to the British Isles. By **W. E. SHUCKARD.** Crown 8vo, 16 Coloured Steel Plates, containing near 100 Figures Engraved from Natural Specimens expressly for the work, by **E. W. ROBINSON**, and 13 Wood-Engravings of Dissections, 10s. 6d.

BRITISH BEETLES; an Introduction to the Study of our Indigenous COLEOPTERA. By **E. C. RYLAND.** Crown 8vo, 16 Coloured Steel Plates, comprising Figures of nearly 100 Species Engraved from Natural Specimens expressly for the work, by **E. W. ROBINSON**, and 11 Wood-Engravings of Dissections by the Author, 10s. 6d.

BRITISH FERNS; an Introduction to the Study of the Ferns, Lycopods, and Equiseta indigenous to the British Isles. With chapters on the Structure, Propagation, Cultivation, Diseases, Uses, Preservation and Distribution of Ferns. By **MARGARET PLUES.** Crown 8vo, 16 Coloured Plates, drawn expressly for the work, by **W. FITCH**, and 56 Wood-Engravings, 10s. 6d.

BARR & SUGDEN'S
AUTUMNAL FLORAL GUIDE
 TO
WINTER AND SPRING GARDENING,

Contains a Treatise on "SPRING GARDENING," with Directions for Planting a series of Beds and Borders, with Early Flowering BULBS and PLANTS, the beauty and general effect of which will bear comparison with the gayest groups of our Summer and Autumn Blooming Plants, and may be had free by intending purchasers.

BULBS and PLANTS for SPRING BLOOMING.

100,000 HYACINTHS, 2s. 6d. to 3s. per doz., 18s. to 21s. per 100
 100,000 NARCISSUS, 6d. to 3s. 6d. per doz., 3s. 6d. to 21s. per 100
 100,000 TULIPS, 8d. to 2s. 6d. per doz., 4s. to 15s. per 100
 200,000 CROCUSES, 1s. 6d. to 4s. per 100, 14s. to 30s. per 1000
 100,000 SNOWDROPS, 2s. 6d. per 100, 21s. per 1000
 10,000 SCILLA SIBERICA and AMCENA, 2s. 6d. per doz., 18s. per 100
 WINTER ACONITES, IRIS, ANEMONES, RANUNCULUS, SCILLAS, etc.
 100,000 CLIVEDEN PANSIES, Blue, Purple, and Yellow, 4s. per doz., 30s. per 100

100,000 CLIVEDEN DAISIES, Pink, Red, and White, 3s. per doz., 21s. per 100
 100,000 VARIEGATED ARABIS, a fine permanent edging, 3s. per doz., 21s. per 100
 200,000 MYOSOTIS SYLVATICA (Forget-me-not), 1s. 6d. per doz., 10s. 6d. per 100
 100,000 STACHYS LANATA, a fine permanent edging, 3s. per doz., 21s. per 100
 POLYANTHUS, WALLFLOWER, PHLOX, ALYSSUM, HEPATICAS, etc.

COLLECTIONS of BULBS for Blooming In-door Decoration, 10s. 6d., 15s. 6d., 21s., 30s., 42s., 63s., and 210s.
 COLLECTIONS of BULBS for Out-door Decoration, 10s. 6d., 15s. 6d., 21s., 30s., 42s., 63s., and 210s.
 COLLECTIONS of SPRING BLOOMING PLANTS, 12s. 6d., 25s., 50s., 100s. to 200s.

BOTANICAL MAGAZINE ADVERTISER.

NEW ENGLISH HYBRID PERPETUAL ROSES, MRS. WARD, MRS. JOHN BERNERS, AND IPSWICH GEM.

ROBERT WARD has the pleasure to announce that he is now taking Orders for the above splendid Seedlings, which will be let out next spring, and that these truly beautiful varieties will prove equally satisfactory with his celebrated 'John Hopper.'

A Descriptive Circular may be had on application.

Coloured Plates by Andrews of 'Mrs. Ward' and 'Mrs. Berners,' post-free for 24 Stamps.

ROBERT WARD, THE ROSERY, IPSWICH.

NEW HARDY CLEMATISES.

CLEMATIS RUBELLA.—Very rich velvety claret; the deepest-coloured Clematis yet offered. Very distinct, and having the advantage of flowering 60 to 70 per cent. of blooms, with five and six sepals. First Certificate, Royal Horticultural Society.

CLEMATIS PRINCE OF WALES.—Large flowers, of a rich deep violet-purple, with red bars down the centre of each sepal. A decided improvement on *C. rubro-violacea*. First Certificate, Royal Horticultural Society.

MESSRS. GEORGE JACKMAN & SON

Have much pleasure in announcing that they are in a position to send out the above CLEMATISES that are distinct, and can with confidence recommend them "amongst the best of hardy Climbers, if not the very best Ornaments for Walls, Trellis-work," etc.

Early orders will secure the strongest Plants, which will be sent out strictly in rotation first week in October.

The 'Floral Magazine,' in the October Number, will insert *C. RUBELLA* and *C. LANUGINOSA CANDIDA*.

Strong Plants, with bine 1½ to 2½ feet, 2ls. each.

The usual allowance to the Trade.

Coloured Drawings, by Andrews, Twenty-four Stamps.

WOKING NURSERY, SURREY.

GLADIOLI, ROSES, AND PÆONIES.

EUGÈNE VERDIER, Fils Aîné, NURSERYMAN, 3, Rue Dunois, Paris, has the honour to inform his numerous Friends and Patrons, that he is now publishing his TRADE CATALOGUE of NEW GLADIOLI, ROSES, and PÆONIES, obtainable direct of him, or of his Agents, Messrs. BETHAM and BLACKITH, Cox's Quay, Lower Thames Street, London, E.C., upon prepaid application.

HYACINTHS, TULIPS, AND OTHER DUTCH BULBS,

IMPORTED BY

WM. CUTBUSH AND SON.

The DESCRIPTIVE PRICED CATALOGUE, with numerous cultural remarks, Post-free on application.

Early Orders earnestly solicited, as the supply cannot possibly meet the increasing demand.

HIGHGATE NURSERIES, LONDON, N.

VINES AND PINES.

B. S. WILLIAMS begs to announce that he has a fine Stock of the above, including all the best kinds. Prices on application.

**** A Descriptive Catalogue of Dutch and other Roots, post-free to all applicants.*

VICTORIA AND PARADISE NURSERIES, HOLLOWAY, LONDON.

AMBROISE VERSCHAFFELT,

NURSERYMAN, GHENT, BELGIUM,

Begs to announce that his NEW GENERAL CATALOGUE of PLANTS, No. 79, is ready, and may be obtained GRATIS, and FREE by post, by writing to him.

SUTTON'S

UNRIVALLED COLLECTIONS OF
BULBOUS FLOWER ROOTS,

FOR BLOOMING DURING THE WINTER AND SPRING.

SUTTON'S COLLECTION OF HARDY FLOWER-ROOTS FOR OPEN GROUND.

No. 1.	A large and choice Collection of ANEMONES, HYACINTHS, CROCUSES, TULIPS, RANUNCULI, NARCISSI, SNOWDROPS, IRISES, GLADIOLI, etc.	£. s.
		2 2
No. 2.	Ditto ditto, consisting of all the same kinds, in reduced quantities	1 1
No. 3.	A Small and Choice ditto	0 10

SORTS FOR FLOWER-POTS AND GLASSES.

No. 4.	A splendid Collection of HYACINTHS, JONQUILS, NARCISSI, EARLY TULIPS, new large CROCUSES, etc.	2 2
No. 5.	The same in Reduced Quantities	1 1
No. 6.	A Small and Choice Assortment	0 10

N.B.—A complete List of the above may be had post-free, and any article specified, if required, will be omitted, and additional quantities of others included.

The very low charges now made for the above choice collections of Flower Roots will, it is believed, ensure a continually increasing demand.

Early Orders are requested before the more scarce kinds are all sold.

SUTTON'S AUTUMN CATALOGUE

Is now ready, and may be had gratis and post-free on application.

All Goods sent Carriage Free, except small parcels, and 5 per cent. allowed for cash payments

Which, light, graceful, and elegant in outline, combines comfort and economy with the very latest fashion. Observe the name "THOMSON," and the Trade Mark "A CROWN." Sold everywhere.

CÆLOGYNE CORRUGATA.

Cælogyne with wrinkled pseudobulbs.

Nat. Ord. ORCHIDEE.—GYNANDRIA MONANDRIA.

Gen. Char. (Vide supra, TAB. 5462.)

CÆLOGYNE *corrugata*; pseudobulbis ovatis rugosissimis cæspitosis diphyllis, foliis oblongis membranaceis racemo erecto 3-6-floro longioribus, bracteis cymbiformibus oblongis, petalis sepalisque subæqualibus oblongis acutis, labelli medio tricristati lobis lateralibus acutiuseculis intermedia ovato acuminato obtuso. *Lindl.*

CÆLOGYNE *corrugata*. *Wight, Icon. t. 1639. Lindl. Fol. Orch.*

Although a very accurate representation of this pretty *Cælogyne* appeared fifteen years ago in Dr. Wight's 'Icones,' it never, so far as I am aware, took its place among our living collections before the year 1863, when some specimens were received from India by the Royal Gardens at Kew. It is found, according to Dr. Wight, near Courtallum, Tulney Mountains (Neilgherries), where it flowers in August and September. It also grows wild in Khasya, according to Lobb. The figure is taken from a specimen that flowered at Knypersley in the summer of the present year. Like many other *Cælogynes*, it will not thrive in the East Indian house, but is quite at home in the coolest part of the *Cattleya* house. It should be grown in a pot.

The wrinkled pseudobulbs, which unfortunately are not so well rendered on the opposite page as in Dr. Wight's plate, are almost peculiar to the species.

DESCR. *Pseudobulbs* in tufts, ovate, very much (reticulately) wrinkled, two-leaved. *Leaves* about a span long, oblong, sub-acuminate, rather longer than the racemes. *Racemes* three- to six-flowered. *Bracts* boat-shaped, oblong. *Sepals* and *petals* nearly equal, oblong, acute, pure white. *Lip* three-lobed, lateral lobes smaller and blunter than the central

which is ovate-acuminate; on the disk are three raised parallel longitudinal lines; the limb of the lip is yellow in the inside, marked with orange streaks.—*J. B.*

Fig. 1. Column. 2. Lip, seen sideways. 3. Ditto, front view:—*magnified.*

COTYLEDON FASCICULARIS.

Glaucous-blue Cotyledon.

Nat. Ord. CRASSULACEÆ.—DECANDRIA PENTAGYNIA.

Gen. Char. Calyx 5-partitus, corollæ tubo æqualis v. brevior. Petala 5, sæpius ad medium connata, erecta v. patentia. Stamina 10, rarissime 5, petalis sæpius breviora. Squamulæ variæ. Ovarii carpella 5, in stylos filiformes attenuata, stigmatibus parvis; ovula ∞ . Folliculi 5, ∞ -spermi.—Herbæ v. frutices, raro annuæ, ramis foliisque sæpius crassis, sed habitu valde variæ. Folia opposita v. alterna, petiolata v. sessilia.

COTYLEDON *fascicularis*; glaberrima, pallide albo-virens, glauca, foliis sparsis sessilibus cuneato-obovatis cuspidatis planiusculis crassis, paniculæ ramis elongatis scorpioideis, floribus magnis pedicellatis pendulis, calycis lobis brevibus late ovatis acutis, corollæ tubo calyce multo longiore subcylindræo, lobis reflexis lineari-oblongis acutis.

So far as these plants can be determined by descriptions, this appears without doubt to be the *Cotyledon fascicularis* of Aiton, and it further agrees with an unnamed drawing made many years ago at Kew of a *Cotyledon* that existed in the Garden at the date of the publication of 'Hortus Kewensis.' It is a beautiful plant, a native of South Africa, from whence the specimen here figured was sent by Mr. Cooper, to our friend W. W. Saunders, Esq., F.R.S., of Reigate, in whose fine collection of succulent plants it flowered in May 1865. The habitats assigned in Harvey and Sonder's 'Flora Capensis' are chiefly in the Karroo districts.

DESCR. A glaucous very pale green erect shrub, one to two feet high, quite glabrous. Leaves scattered, two to three inches long, sessile, broadly obovate-cuneate, cuspidate, fully one-third of an inch in thickness, slightly concave, very pale glaucous-green, with a yellowish margin. Flower-stalk ten to twenty inches high, stout, terete, erect, paniculately branched; branches erecto-patent, with scorpioid inflorescence. Bracts on the stem few, small, half an inch long, oblong,

acute. *Flowers* pedicellate, pendulous, one inch long. *Calyx-lobes* broadly ovate, acute. *Corolla* puberulous, five to six times longer than the sepals, cylindrico-campanulate, with five reflexed linear-oblong lobes; *tube* yellow-green and dull red; *lobes* dull red with green margins. *Stamens* ten, included; *filaments* pubescent at the very base. *Squamulæ* connate with the base of the ovary, short, concave.—*J. D. II.*

Fig. 1. Base of corolla and stamens. 2. Carpels and squamulæ. 3. Transverse section of carpels:—*all magnified.*

W. Fitch, del. et lith.

Vincent Brooks, Imp

GLYPTOSTROBUS PENDULUS.

Pendulous deciduous Cypress.

Nat. Ord. CONIFERÆ.—MONŒCIA POLYANDRIA.

Gen. Char. Flores in iisdem ramis monoici. MASC. Amenta parva, ramulis elongatis spicata v. paniculata, oblonga, sessilia. Antheræ 6-8, globosæ, ad basin squamæ late ovatæ, sessiles. FÆM. Amenta parva, ad basin spicæ masculæ pauca; squamæ 8-10, ovatæ, patentes. Ovula 2, ad basin squamarum, erecta, lagæiformia. Strobili ovoideo-subglobosi, lignosi; squamæ e basi strobili ortæ, lineari-obcuneatæ, imbricatæ, caducæ, dorso mucrone conico instructæ. Semina 2, ad basin squamæ, compressa; testa membranacea, superne alata.—Arbores Chinenses, ramulis erectis v. pendulis. Folia alterna, sparsa v. disticha, lineari-subulata, subtrigona v. plana. Gemmæ perulatæ.

GLYPTOSTROBUS *pendulus*; ramis patentibus horizontalibus et decurvis, ramulis ultimis adscendentibus (demum pendulis) simpliciusculis elongatis, foliis junioribus subulatis adultis lineari-acicularibus acuminatis.

GLYPTOSTROBUS *pendulus*. Endl. *Synops. Conif.* p. 71. Carrière, *Traité Gen. Conif.* p. 152.

TAXODIUM *Sinense*. Hort. *Noisette*; Gord. *Pinetum*, 308.

TAXODIUM *Sinense pendulum*. Forbes, *Pinet. Woburnense*, p. 180. Loudon, *Ecycl.* p. 1078.

CUPRESSUS *disticha*, β . *nutans*. Ait. Hort. *Kew. ed. 2.* p. 323.

One plant of the beautiful tree here figured was long cultivated at Kew, side by side with a specimen (since dead) of *Taxodium distichum*, of which it was considered a variety by the elder Aiton. Of its native country or introducer, however, nothing is known, and I am indebted to Professor Oliver (who this year observed male and female flowers on it) for clearing up its botanical history, and referring it, no doubt correctly, to the rare and little known *Glyptostrobus pendulus* of China. Its similarity to the *Taxodium distichum* is very striking: like that plant it has pendulous spikes of male cones, with one or few female cones at the base of the spike, and sheds its ultimate branches annually, but it differs in the

foliage not being distichous, in the scales of the cone not being peltate, but arising from one point at the base of the cone, and in the winged seeds. The habit too is very remarkable, owing to the great slenderness of the twisted stem, decurved branches, and pectinately disposed branchlets.

DESCR. A slender tree, forty feet high; trunk straight, covered with ragged reddish-brown bark. *Branches* horizontal and decurved, slender, ultimate four to six inches long, at first ascending and nearly erect, giving the branches a pectinate appearance, pendulous and deciduous in autumn. *Leaves* inserted all round the branchlets, young one-sixth to one quarter of an inch long, subulate, trigonous; adult half to three-quarters of an inch long, nearly flat, narrow linear acicular, acuminate. *Male inflorescence* in pendulous spikes or narrow racemes two to four inches long, from the tips of the branches. *Male cones* one-eighth of an inch long, as broad as the short peduncles, which are covered with closely imbricating triangular scales, and ovoid-obtuse. *Scales* eighteen to twenty, like those on the peduncles, each bearing six to eight globose anther-cells at its base. *Female cones* minute, solitary or few at the bases of the male spikes, on very short scaly peduncles. *Scales* twelve to twenty, ovate with subulate lips, spreading, each with two collateral erect flagon-shaped ovules at its base. *Ripe cone* unknown.—*J. D. II.*

Fig. 1. Leaves. 2. Male peduncle and cone. 3. and 4. Male scales and anther-cells. 5. Female cone. 6. Scale of ditto and ovules:—*all magnified.*

HELIPTERUM COTULA.

Cotula-flowered Everlasting.

Nat. Ord. COMPOSITÆ.—SYNGENESIA SUPERFLUA.

Gen. Char. Capitulum multiflorum, nunc homogamum, floribus omnibus hermaphroditis tubulosis 5-dentatis; nunc heterogamum, fl. radii uniseriatis sæpe paucissimis fœmineis gracilibus. Involucrum imbricatum, squamis scariosis, interioribus conniventibus v. radiantibus. Receptaculum planum, epaleaceum, nunc nudum v. areolatum, nunc fimbrilliferum. Achenia erecta, sessilia, areola terminali. Pappus 1-serialis, plumosus.—Herbæ aut suffrutices Austro-Africanæ et Australasiæ.

HELIPTERUM *Cotula*; herbaceum, laxè pilosum v. subvillosum, ramis elongatis gracilibus simpliciusculis 1-cephalis, foliis filiformibus, involucri squamis radiantibus albis v. aureis, interioribus oblongis subacutis, intimis sæpe abbreviatis, pappi setis sursum dilatatis longè plumosis, achænio glaberrimo.

HELIPTERUM *Cotula*. *De Cand. Prodr. v. 6. p. 215.*

HELIPTERUM *citrinum*. *Steetz in Plant. Preiss. v. 1. p. 474.*

HELIPTERUM *simplex*. *Steetz, l. c. p. 475.*

HELIPTERUM *præcox*. *F. Muell. in Herb. Hook.*

HELICHRYSUM (*Helipterum*) *Cotula*. *Benth. in Huegel Enum. p. 65.*

A very beautiful West Australian Everlasting, for the seeds of which we are indebted to Mr. Thompson, of Ipswich, in whose establishment, and that of Kew, it flowered in May of the present year. The seeds were sent from Swan River by the son of the late T. Drummond, the veteran explorer of the vegetable riches of that country, and the introducer of most of the beautiful plants we possess from it. Like some other species of this genus, *H. Cotula* bears heads of two colours, golden-yellow and white, but I have seen no intermediates, and the individual plants have one-coloured heads; the white-headed variety is the *H. Cotula*, the yellow *H. citrinum*, whilst *H. simplex* seems founded upon weak unbranched specimens. The plants appear to be common in South-West Australia.

DESCR. A slender annual plant, six to twenty-four inches high, more or less covered with weak flaccid woolly hairs. *Stem* terete, generally much branched from the base, but sometimes simple; *branches* very slender. *Leaves* scattered (opposite in very young weak plants), one inch long, filiform, terete. *Heads* half to one inch across, solitary at the ends of the branches; yellow, or white with a yellow eye. *Involucral scales* radiating, scarious, oblong or oblong-lanceolate; outer shorter, intermediate quarter of an inch long, subacute; innermost again shorter, and sometimes very short and truncate. *Pappus* hairs thickened upwards, very plumose. *Achenes* smooth.—*J. D. H.*

Fig. 1. Leaf. 2. Involucral scale. 3. Floret. 4. Pappus:—*all magnified.*

BOLBOPHYLLUM RETICULATUM.

Reticulated-leaved Bolbophyllum.

Nat. Ord. ORCHIDÆ.—GYNANDRIA MONANDRIA.

Gen. Char. (Vide supra, TAB. 5309.)

BOLBOPHYLLUM *reticulatum*; rhizomate elongato, pseudobulbis pedunculis squamis amplis imbricatis truncatis, pseudobulbis ovoideis 1-phyllis. folio amplo ovato-cordato acuminato pallide viridi, nervis saturate viridibus nervisque pulcherrime reticulato, pedunculis brevibus sub-2-floris, floribus magnis, sepalo dorsali petalisque subsimilibus ovato-lanceolatis acuminatis intus purpureo striatis, sepalis lateralibus majoribus concoloribus subfalcatis, labello trulliformi recurvo.

BOLBOPHYLLUM *reticulatum*. *Bateman, mss.*

A most singular and beautiful plant, certainly the finest of the genus, whether we consider the size of the flower, its handsome striped sepals and petals, or the extraordinary beauty of the large reticulated leaves. It was discovered by Thomas Lobb in Borneo, and flowered with the employers of that successful collector, Messrs. Veitch, at the Royal Exotic Nurseries, King's Road, in August of the present year. There is nothing at all resembling it in either the Lindleyan or Hookerian Herbaria at Kew, and may no doubt be taken as an earnest of the Orchideous riches remaining to be discovered in the Bornean forests.

DESCR. *Rhizome* elongate, prostrate, simple or sparingly branched, covered with closely imbricating, broadly ovate, acute brown scarios sheathing scales. *Pseudobulbs* solitary, scattered, ovoid, about an inch long, bearing one leaf covered by two or three sheathing scales, like those of the rhizome, but larger. *Leaf* large, three to five inches long, ovate-cordate, acuminate, much nerved, the longitudinal and transverse nerves deep green, producing a beautiful reticulation on the paler green of the substance of the leaf; *petiole* short, stout.

Peduncle from the base of the pseudobulb, short, stout, curved, one to two inches long, covered with sheathing ovate-acuminate bracts, two-flowered. *Flowers* one and a quarter inch diameter, pale externally, internally white, with stripes of clear red-purple (sometimes broken up into spots) in the sepals and petals internally. *Sepals* arched; dorsal ovate-lanceolate, acuminate; lateral much broader at the base, somewhat falcate and decurved. *Petals* like the dorsal sepal, but smaller and more acuminate. *Lip* trowel-shaped, recurved, cordate, with recurved auricles at the base, rather fleshy, spotted with purple; *claw* slender.—*J. D. H.*

Fig. 1. Ovary, column, and lip. 2. Under side of lip. 3 and 4. Pollen:—*all magnified.*

W. Fish del et lit.

GREEN BROOKS Imp.

MUSSCHIA WOLLASTONI.

Mr. Wollaston's Musschia.

Nat. Ord. CAMPANULACEÆ.—PENTANDRIA MONOGYNIA.

Gen. Char. Calyx 5-fidus. Corolla profunde 5-fida, aurea. Stamina 5, libera, filamentis basi glabris leviter dilatatis; antheræ lineares, cuspidatæ. Ovarium breve, 5-gonum; stylus columnaris, stigmatibus 5 elongatis horizontalibus apice revolutis. Capsula 5-locularis, 10-nervis, lateraliter fissuris numerosis inter nervos dehiscens, loculis 5 cum lobis calycinis alternantibus. Semina ovoidea.—Suffrutices glabri; caule robusto erecto. Folia alterna, magna, serrata. Panicula pyramidata, terminalis. Flores magni. flavi.

MUSSCHIA Wollastoni; herbacea, hirta-pubescens, suffrutescens, foliis oblongo-lanceolatis acutis basi longe attenuatis sessilibus argute duplicato-serratis pubescentibus subtus hirsutis, panicula pyramidata elata multiflora, ramis patentibus, calycis sinibus vix appendiculatis, laciniis oblongo-lanceolatis acuminatis tubo 2-4-plo longioribus, corollæ velutinæ laciniis linearibus tubo longioribus.

MUSSCHIA Wollastoni. *Lowe in Hook. Lond. Journ. Bot. v. 8. p. 298. Johnson, l.c. v. 9. p. 164.*

A beautiful plant, introduced from Madeira into Kew about ten or twelve years ago, where it has flowered annually since in a cool greenhouse. The genus to which it belongs is restricted to the Madeiran group, and might perhaps be best referred to *Campanula* as a section of that genus, equivalent to *Eucodon* and *Medium*; it is confined to the Madeiran islands. The only other known species of *Musschia* is the old *M. aurea*, a plant cultivated at Kew as early as 1777, and figured in the 'Botanical Register,' t. 57.

The Rev. Mr. Lowe, who is the author of this species, describes it as being found but rarely in shaded valleys of Madeira, above three to four thousand feet elevation, and adds, in a private letter, that its habit is so much like that of *Sonchus fruticosus*, that it is only distinguishable at a little distance, when out of flower, by the non-sinuate leaves.

DESCR. A large-leaved undershrub. Stem naked, usually

simple, two to six feet high, terminated by a crown of leaves and pyramidal panicle. *Leaves* flaccid, one to two feet long, often purplish, oblong-lanceolate, tapering to a broad sessile base, doubly serrate, pubescent above, hirsute below, succulent towards the middle. *Panicle* erect, pyramidal, two feet high and upwards; *branches* spreading. *Flowers* large, yellow-green, one and a half to two inches long. *Calyx* green; *lobes* oblong-lanceolate, acuminate, much longer than the angled tube. *Corolla-tube* cylindrical, shorter than the linear recurved lobes. *Stigmata* radiating, very large, half an inch long, revolute at the apex.—*J. D. H.*

Fig. 1. Calyx, ovary, and stamen,—*magnified.*

Summary of Scientific Progress.

FERNS, BRITISH AND FOREIGN: their History, Organography, Classification, Nomenclature, and Culture; with Directions showing which are the best adapted for the Hothouse, Greenhouse, Open-air Fernery, or Wardian Case. With an Index of Genera, Species and Synonyms. By JOHN SMITH, A.L.S., late Curator of the Royal Gardens, Kew. Crown 8vo, cloth, fully illustrated, price 6s.

THE INDUSTRIAL RESOURCES OF BIRMINGHAM AND THE MIDLAND HARDWARE DISTRICT: A Series of Reports collected by the Local Industries Committee of the British Association at Birmingham, in 1865. Edited by SAMUEL TIMMINS. 8vo, cloth, price 14s.

GUIDE FOR TRAVELLERS IN THE PLAIN AND ON THE MOUNTAIN. By CHARLES BONER, Author of 'Chamois Hunting in Bavaria,' 'Forest Creatures,' etc. Fcp. 8vo, cloth, Illustrated, price 2s.

THE AUTOGRAPHIC ALBUM: A Collection of Four hundred and seventy facsimiles of Holograph Writings of Royal, Noble, and distinguished Men and Women of Various Nations, with Biographical Notices. By LAWRENCE B. PHILLIPS, F.R.A.S. Lithographed by F. G. Netherclift. Toned Paper, 4to, cloth, gilt edges, price 21s.

A SYNOPSIS OF HERALDRY; or, A Short and Easy Method of acquiring the Art of Blazon. With upwards of Four hundred Engravings, illustrating the Arms of many Families. By C. M. ELVIN, M.A., F.G.H.S., Author of a 'Handbook of Mottoes,' etc. Crown 8vo, cloth, price 3s.

ON DISEASES OF THE STOMACH: the varieties of Dyspepsia, their Diagnosis and Treatment. By S. O. HABERSHON, M.D. Lond., F.R.C.P., Physician to Guy's Hospital. [Ready Oct. 1.

ON MALIGNANT CHOLERA: Its Origin, Pathology, Treatment, and Mode of Prevention. By EDWARDS CRISP, M.D., M.R.C.S., L.A.C., late Physician to the Metropolitan Dispensary. 8vo, price 5s.

THE PILL BOOK; or, Pills, Boluses, Globules, Grains, and Granules, Pharmacopœial, Hospital, and Magistral: their Preparation, Formulæ, Doses, Leading Uses, and Synonyms, including Quack Medicines. By ARNOLD J. COOLEY, Author of 'Cyclopædia of Receipts.' [Part I. ready in October.

By the same Author.

THE TOILET AND COSMETIC ARTS in Ancient and Modern Times. Crown 8vo, cloth, price 10s.

THE LARYNGOSCOPE: its Uses in Diseases of the Throat. With an Appendix on Rhinoscopy. By MORELL MACKENZIE, M.D. Lond., M.R.C.P., Physician to the Hospital for Diseases of the Throat. Second Edition, fully Illustrated, 8vo, cloth, price 6s. [Ready Oct. 1.

ON SURGICAL DISEASES OF WOMEN. By BAKER BROWN, F.R.C.S. (Exam.). Third Edition, revised and enlarged, fully Illustrated, 8vo, cloth, price 15s. [Ready Oct. 1.

SOWERBY'S ENGLISH BOTANY, VOL. VI. Edited by J. T. BOSWELL SYME, F.L.S. The popular portion by Mrs. LANKESTER. Third Edition, super-royal 8vo, cloth, price £1. 18s., half morocco £2. 2s., whole morocco £2. 8s. 6d. [Ready Nov. 1.

HEATING BY HOT WATER.

It is now generally admitted that Buildings of any kind can be more effectually warmed by Hot Water than by any other means; but as so much depends on the way in which the Apparatus is fixed, it is of the greatest importance that it be done by experienced men.

J. JONES & SONS are prepared to estimate for Warming, to any extent—

GREENHOUSES.	CHURCHES.	FACTORIES.
CONSERVATORIES.	CHAPELS.	OFFICES.
VINERIES.	SCHOOLS.	WORKSHOPS.
HOTHOUSES.	READING ROOMS.	WAREHOUSES.
FORCING PITS.	LECTURE ROOMS.	DRYING ROOMS.
PEACH HOUSES.	BILLIARD ROOMS.	CELLARS.
PINE STOVES.	HALLS AND PASSAGES.	COACH-HOUSES.
ORCHARD HOUSES.	BATHS.	HARNES ROOMS.

J. JONES & SONS' Apparatus is simple in construction, moderate in cost, economical in working.

It is equally available for the Amateur's Greenhouse, or the longest range of Forcing Houses; for the smallest Chapel or the largest Church; for Private Offices or those of Public Companies.

It is admirably adapted for Dwelling Houses, as coils of pipes can be put in any part, for warming the various rooms. One or more Baths may be had from the same boiler, and a constant supply of hot water obtained in any part of the house.

For Warehouses and Workshops this system of heating is unsurpassed, as not only the means of keeping goods dry, but it also adds to the comfort of workpeople, and thereby effects a saving in labour.

J. JONES & SONS recommend boilers of all kinds being set in brickwork where possible; but portable boilers can be supplied, if required.

MATERIALS.—All Materials supplied will be of the best quality.

DELIVERY.—Boilers of various kinds, and pipes and connections, being always in stock, can, at a very short notice, be sent to any part.

FIXING.—The Fixing will be done by experienced men, fully capable of finishing properly any work they may undertake; and J. JONES & SONS are prepared to guarantee the effectual working of any apparatus fixed by their own men.

ESTIMATES.—Plans and Estimates will be sent on application.

J. JONES & SONS,
IRON MERCHANTS AND HORTICULTURAL ENGINEERS
6, BANKSIDE, SOUTHWARK, LONDON, S.E.

LOVELL REEVE & CO., 5, HENRIETTA STREET, COVENT GARDEN.

1866.

NEW EDITION OF BENTHAM'S HANDBOOK OF THE BRITISH FLORA.

NOW READY.

HANDBOOK OF THE BRITISH FLORA; a Description of the Flowering Plants and Ferns indigenous to, or naturalized in, the British Isles. For the Use of Beginners and Amateurs. By GEORGE BENTHAM, F.R.S., President of the Linnean Society. New Edition. Crown 8vo, 12s.

JUST PUBLISHED.

BRITISH SPIDERS; an Introduction to the Study of the ARANEIDÆ of Great Britain and Ireland. By E. F. STAVELEY. Crown 8vo, 16 Plates, drawn expressly for the work, by TUFFEN WEST, containing Coloured Figures of nearly 100 Species and 40 Diagrams, showing the number and position of the eyes in different Genera, and 44 Wood-Engravings, 10s. 6d.

BRITISH BEES; an Introduction to the Study of the Natural History and Economy of the Bees indigenous to the British Isles. By W. E. SHUCKARD. Crown 8vo, 16 Coloured Steel Plates, containing nearly 100 Figures Engraved from Natural Specimens expressly for the work, by E. W. ROBINSON, and 13 Wood-Engravings of Dissections, 10s. 6d.

BRITISH BEETLES; an Introduction to the Study of our Indigenous COLEOPTERA. By E. C. RYE. Crown 8vo, 16 Coloured Steel Plates, comprising Figures of nearly 100 Species Engraved from Natural Specimens expressly for the work, by E. W. ROBINSON, and 11 Wood-Engravings of Dissections by the Author, 10s. 6d.

BRITISH FERNS; an Introduction to the Study of the Ferns, Lycopods, and Equiseta indigenous to the British Isles. With chapters on the Structure, Propagation, Cultivation, Diseases, Uses, Preservation, and Distribution of Ferns. By MARGARET PLUES. Crown 8vo, 16 Coloured Plates, drawn expressly for the work, by W. FITCH, and 56 Wood-Engravings, 10s. 6d.

BRACHYSTELMA BARBERIÆ.

Mrs. Barber's Brachystelma.

Nat. Ord. ASCLEPIADEÆ.—PENTANDRIA DIGYNIA.

Gen. Char. Calyx 5-phyllus. Corolla campanulata, sinibus angulatis. Corona staminea 5-phylla, foliolis gynostegio medio adnatis, 3-lobis, lobis antheris oppositis simplicibus longioribusque ad basin dentibus binis introrsum plus minus pilosis stipatis. Gynostegium inclusum. Antheræ simplices, membrana destitutæ. Massæ pollinis erectæ, supra basin affixæ, cum margine pellucido quasi operculatæ. Stigma muticum. Folliculi graciles, læves, erecti, pedunculo recto. Semina comosa.—Herbæ Austro-Africanæ, perennes, radice tuberosa, eduli.

BRACHYSTELMA *Barberiæ*; caule brevissimo, foliis lineari-oblongis acutis, floribus numerosissimis in capitulum amplum globosum congestis, corollæ limbo explanato, lobis caudatis elongatis apicibus arcuatis cohærentibus.

BRACHYSTELMA *Barberiæ*. *Harv. mss.*

The 'Botanical Magazine' claims the privilege of figuring, from time to time, plants which are not as yet in cultivation in England, but which are so remarkable for their interest or beauty as to be objects of great and special interest, and to which public attention should hence be drawn. Amongst such subjects few can rival the subject of the present Plate, of which an admirable coloured drawing, made by our accomplished correspondent Mrs. Barber, of The Highlands, Graham's Town, was transmitted to me for our late mutual friend Dr. Harvey, of Dublin, who had already named the plant from dried specimens. On hearing of Dr. Harvey's decease, Mrs. Barber transferred the drawing to me; and though unable to offer any botanical description of the parts of the flower, I have not hesitated to publish it, both in justice to Dr. Harvey's memory and to his wish that it should bear the name of the amiable person and zealous botanist to whose exertions we owe our knowledge of it.

The genus *Brachystelma* is a rather large South-African

one; the species grow in dry places, and form tuberous roots that are eaten by the natives. Some of the species have erect and others twining stems, but none hitherto described approach this in habit, whilst the coherent Ceropogia-like tips of the corolla-lobes is an unusual character in the genus. It was discovered by Mr. Bowker (Mrs. Barber's brother) in the valleys of the Isomo river, in Kaffirland.

DESCR. *Root* a depressed tuber, as large as a turnip. *Stem* very short. *Leaves* spreading, three to four inches long, linear-oblong, acute. *Flowers* collected into a sessile, dense, globose capitulum, four to five inches in diameter, dingy-purple, speckled with yellow in the disk. *Corolla-limb* one inch broad, slightly concave, shortly five-lobed; *lobes* triangular, terminating in slender tails one inch long, which arch inwards and cohere over the centre of the flower.—*J. D. H.*

NIEREMBERGIA RIVULARIS.

Water Nierembergia.

Nat. Ord. SOLANÆ.—PENTANDRIA DIGYNIA.

Gen. Char. (Vide supra, TAB. 5599.)

NIEREMBERGIA *rivularis*; glaberrima, caule gracili repente, foliis alternis longe petiolatis oblongis oblongo-spathulatisve obtusis, floribus breviter pedunculatis oppositifoliis, calycis tubo cylindræo supra medium 5-lobo, lobis oblongo-lanceolatis subacutis, corolla albida v. dilute flavescente, tubo gracili elongato, limbo late campanulato explanato, lobis obtusis.

NIEREMBERGIA *rivularis*. *Miers in Hook. Lond. Journ. Bot. v. 5. p. 167.*
Walp. Rep. v. 6. p. 568.

A beautiful little species, a native of La Plata, whence it was introduced by Messrs. Veitch, of the Royal Exotic Nurseries, Chelsea, with whom it flowered in July of the present year. I have dried specimens from various places near Buenos Ayres, where it was discovered by the late Mr. Tweedie upwards of thirty years ago. This collector describes it as a most lovely and fragrant plant, abounding by the sides of the Plate river, and only within high-tide mark, its flowers rising above the dwarf grass which grows in similar situations in such profusion, that the plant is discerned from a great distance. The flowers are sometimes tinged with rose-colour.

DESCR. Everywhere glabrous. *Stems* slender, creeping and rooting abundantly, branched and matted. *Leaves* very variable in size, with the petioles one to three inches long; petioles very long and slender; blade oblong or oblong-spathulate, obtuse, membranous, nerveless or almost so. *Flowers* sessile or shortly peduncled. *Calyx* a quarter to three-quarters of an inch long, cylindric, with five slightly spreading oblong-lanceolate subacute lobes. *Corolla-tube* one to

two and a half inches long, very slender, yellowish-white; *limb* broadly campanulate, spreading, white with a yellowish tinge; *lobes* broad, obtuse. *Staminal tube* entire to the summit. *Stigmas* transversely oblong.—*J. D. H.*

Fig. 1. Stamen and stigmas. 2. Stigma. 3. Ovary:—*all magnified.*

NOTYLIA BICOLOR.

Two-coloured Notylia.

Nat. Ord. ORCHIDÆ.—GYNANDRIA MONANDRIA.

Gen. Char. Perianthium explanatum, æquale; sepalis 2 lateralibus connatis labello suppositis. Labellum liberum, ealcaratum, patentissimum, integrum, medio callosum. Columna erecta. Stigma rima verticalis. Anthera dorsalis, unilocularis, cum stigmatе parallela. Clinandrium planum, anticè callosum, posticè marginatum. Pollinia duo integra, caudiculâ elongato-cuneatâ, glandulâ minutâ.—Herbæ epiphytæ Americanæ. Folia equitantia vel plana. Spicæ radicales. *Lindl. Gen. et Sp. p. 192.*

NOTYLIA *bicolor*; foliis equitantibus ensatis spicis nutantibus apice racemosis multi-(10-20-)floris duplo brevioribus, sepalis lineari-setaceis (inferiora imâ basi coalita) albis, petalis paulo latioribus brevioribus lazulinis; labello libero breviter unguiculato ligulato ante apicem sagittato, apice setaceo ecarinato; columnâ medio angulatâ labello duplo breviorе, antherâ maximâ.

NOTYLIA *bicolor*. *Lindl. in Benth. Plant. Hartw. 1842. p. 93. Rehb. Xen. Orch. v. 1. p. 46.*

This little Orchid is a perfect gem. It was first discovered in Guatemala by Mr. Skinner, and afterwards by Hartweg in the mountains of Comalapan, where it grows upon oaks. In its colouring it is quite unlike the other dozen or more species of *Notylia*, which are generally of a greenish-white, and, except as botanical curiosities, not worth growing.

Notylia bicolor has been established at Knypersley for more than twenty years on a small branch of the Cork-tree Oak, on which it never fails to flower profusely in the autumn. It should be grown near the light at the cooler and drier end of the Cattleya-house. The flowers continue a long time.

DESCR. *Whole plant* often not more than an inch and a half high. *Leaves* generally about five, equitant, stiff, acuminate, slightly scimitar-shaped, scarcely half the length of the

flower-spikes. *Flower-spikes* drooping, two or three inches long, very slender and graceful, bearing (on their upper portion) from ten to twenty elegant little flowers. *Sepals* setaceous (the two lower ones joined together), white. *Petals* rather wider than the sepals, lilac, with blue spots towards their base. *Lip* free, narrow, slightly unguiculate, arrow-shaped near its apex, ecarinate, resembling the petals in colour. *Column* about half the length of the lip, angular near the middle. *Anther* very large, overlying nearly one-half of the column.—*J. B.*

Fig. 1. Flower, seen in front. 2. Ditto, seen sideways. 3. Side-view of lip and column. 4. Lip. 5 and 6. Pollen-masses and gland:—*magnified.*

GLYPHÆA MONTEIROI.

M. Monteiro's Glyphæa.

Nat. Ord. TILIACEÆ.—POLYANDRIA MONOGYNIA.

Gen. Char. *Sepala* 5, rarius 4, libera. *Petala* totidem, basi nuda. *Stamina* ∞ , toro haud elevato inserta, filamentis brevibus basi in annulum brevissime connatis v. liberis; *antheræ* filamentis longiores, lineares, erectæ, connectivo apice in membranam brevissime producto. *Ovarium* 4–10-loculare, loculis ∞ -ovulatis; *stylus* brevis, stigmatate obtuso. *Fructus* oblongo-fusiformis, inermis, mesocarpio tuberoso, subindehiscens, ∞ -spermus, carpellis inter semina transverse septatis. *Semina* in loculis 1-seriata, orbiculata v. subquadrata, compressa, verticalia, testa crustacea; *albumen* carnosum; cotyledones cordato-orbiculatæ.—Frutices Africanæ. Folia *subintegra* v. *dentata*, 3-plinervia. *Cymæ paucifloræ*, *axillares laterales et terminales*. Flores *flavi*.

GLYPHÆA *Monteiroi*; ramis foliisque glabris, ramulis et inflorescentia stellatim pilosis, foliis ovatis oblongisve acuminatis crebre irregulariter dentatis, antheris basi breviter 2-lobis.

The genus *Glyphæa* was established in the Flora of the Niger Expedition, upon a remarkable shrub discovered near the Congo river by Christian Smith, and which has since been found in Senegambia, Sierra Leone, and Fernando Po. More recently, two other forms or species have been detected also in tropical Africa; one on the east coast, and the other, the subject of the present Plate, on the south-west, viz. at Benguela, by M. Joachim Monteiro, to whom we are indebted for specimens of many curious plants, and especially for the *Welwitschia* (Tabb. 5368–69). This differs from the original species in the larger, broader, more ovate and more serrate leaves, in the much larger flower, and in the anthers not being so confluent with the filaments at the base, but terminating in two evident lobules or teeth; whether these are permanent characters, or whether all the three *Glyphæas* may not be best referred to one species, is a point that cannot be determined without fuller materials than we possess. The *Glyphæa Monteiroi* flowered in September of

the present year, in a tropical stove, from seeds sent us by its discoverer.

DESCR. A *shrub*, with slender glabrous branches. *Leaves* glabrous, four to six inches long, membranous, oblong or ovate, rounded or slightly unequally cordate at the base, acuminate, acutely irregularly toothed. *Cymes* three- to four-flowered, pubescent with stellate hairs. *Flowers* an inch to an inch and a quarter in diameter, bright yellow. *Sepals* broadly linear, subacute. *Petals* similar in form, obtuse. *Anthers* narrow-linear, slightly two-lobed at the base. *Fruit* two inches long, sharply ribbed, four- to seven-celled.—*J. D. H.*

Fig. 1. Stamen. 2. Germen. 3. Transverse section of ovary. 4. Fruit. 5. Transverse section of do.:—*all but 4 and 5 magnified.*

2

VANDA BENSONI.

Colonel Benson's Vanda.

Nat. Ord. ORCHIDÆ.—GYNANDRIA MONANDRIA.

Gen. Char. (Vide supra, TAB. 4432.)

VANDA *Bensoni*; foliis canaliculatis oblique inæquali-dentatis racemis erectis rigidis multifloris duplo brevioribus, floribus distantibus pedicellis subæqualibus, sepalis petalisque minoribus unguiculatis obovatis obtusis intus guttulatis (nec tessellatis), labello convexo ovato disco trilamellato apice altè bifido subreniformi auriculis ad basin triangularibus obtusiusculis, calcare conico obtuso.

VANDA *Bensoni*. *Bateman, mss.*

This elegant addition to our list of *Vandas* was discovered in Rangoon and sent to Messrs. Veitch by that zealous naturalist Colonel Benson, after whom I have great pleasure in naming it. It flowered at Chelsea shortly after its arrival in the summer of the present year (1866), though the spikes were of course inferior to those produced in its own country, some of the latter—which are now in the Kew herbarium—having been upwards of half a yard long, and carried as many as fifteen flowers. The length of its spikes, the absence of all tessellation, the spotting and yellow colour of the inside of the flowers, are among the marks that distinguish the species from *V. Roxburghii* and *V. concolor*, to which it is nearly allied. It appears to be a very free grower.

DESCR. *Plant* a foot or more high, bearing a compact mass of distichous channelled coriaceous *leaves*, which are obliquely and unequally toothed, a span or more long. *Flower-spikes* upright, many-flowered, much longer than the leaves. *Pedicels* about an inch long, white. *Flowers* not closely arranged, about two inches across: the *sepals* and

petals (which are smaller than the sepals) unguiculate, ovate, obtuse, white on the outside, and of a yellowish-green on the inside, where they are marked with numerous reddish-brown dots. *Lip* about the same length as the sepals, with two small, triangular, rather blunt side-lobes or auricles at its base, from in front of which it is ovate, convex, traversed by three lamellæ, and terminated by a kidney-shaped, broad, bifid apex, which is of a beautiful violet colour, while the auricles and conical spur at the base are white.—*J. B.*

Fig. 1. Lip and column, seen sideways. 2. Ditto, seen in front:—*magnified.*

Now ready, Royal 4to, with 10 coloured Plates, 10s. 6d.,

A SECOND CENTURY OF ORCHIDACEOUS PLANTS,

Selected from the subjects published in Curtis's 'Botanical Magazine' since the issue of the 'First Century.'

Edited by JAMES BATEMAN, Esq., F.R.S.

To be completed in Ten Parts.

L. REEVE & CO., 5, HENRIETTA STREET, COVENT GARDEN.

The Records of 10,763 Cures of Asthma, Consumption, and other Disorders of the Throat and Lungs, by

have been published in the last Twelve Months.

The benefit to society which has resulted from the discovery of this Medicine is, however, far greater than these figures show, as many thousands of cures are effected, and not made known out of the circle of the friends of the parties.

This has now been going on for more than 30 years in all quarters of the globe with the same unvarying result, so that, one after the other, all Medicines previously relied upon for these disorders have nearly, if not entirely, dropped out of use—the supposed or pretended cures upon which they relied not standing the test of investigation.

TO SINGERS AND PUBLIC SPEAKERS

Dr. Locock's Wafers are invaluable for clearing and strengthening the voice, and have a pleasant taste.

DR. LOCOCK'S WAFERS

Are sold by every Medicine Dealer throughout the world in boxes, at prices ranging from 1s. 1½d. to 11s., so as to meet the circumstances of all ranks.

Be careful to see the Name in the Government Stamp.

DESTROY YOUR INSECT PESTS

You may easily destroy all Plant Pests,

Red Spider,
Mealy Bug,
Thrip,

Green and Black Fly,
American Blight,
Ants,

Scale,
Mildew,

Without injury to the most delicate Plant or Tree, by using

FOWLER'S GARDENERS' INSECTICIDE,

Pronounced by all who have used it to be far superior to any other remedy.

ONE TRIAL WILL PROVE ITS EFFICACY.

Testimonials forwarded on application.

Price 1s. 6d., 3s., 5s. 6d., and 10s. per Tin.

GEORGE & THOMAS FOWLER, NORTH STREET, BRIGHTON,

AND OF

HOOPER & CO., COVENT GARDEN MARKET, LONDON.

THE MOMENTOUS QUESTION.

CRINOLINE.

LADIES SHOULD AT ONCE SEE THOMSON'S NEW STYLE,

Which, light, graceful, and elegant in outline, combines comfort and economy with the very latest fashion. Observe the name "THOMSON," and the Trade Mark "A CROWN." Sold everywhere.

HEATING BY HOT WATER.

It is now generally admitted that Buildings of any kind can be more effectually warmed by Hot Water than by any other means; but as so much depends on the way in which the Apparatus is fixed, it is of the greatest importance that it be done by experienced men.

J. JONES & SONS are prepared to estimate for Warming, to any extent—

GREENHOUSES.	CHURCHES.	FACTORIES.
CONSERVATORIES.	CHAPELS.	OFFICES.
VINERIES.	SCHOOLS.	WORKSHOPS.
HOTHOUSES.	READING ROOMS.	WAREHOUSES.
FORCING PITS.	LECTURE ROOMS.	DRYING ROOMS.
PEACH HOUSES.	BILLIARD ROOMS.	CELLARS.
PINE STOVES.	HALLS AND PASSAGES.	COACH-HOUSES.
ORCHARD HOUSES.	BATHS.	HARNESS ROOMS.

J. JONES & SONS' Apparatus is simple in construction, moderate in cost, and economical in working.

It is equally available for the Amateur's Greenhouse, or the longest range of Forcing Houses; for the smallest Chapel or the largest Church; for Private Offices, or those of Public Companies.

It is admirably adapted for Dwelling Houses, as coils of pipes can be placed in any part, for warming the various rooms. One or more Baths may be heated from the same boiler, and a constant supply of hot water obtained in any part of the house.

For Warehouses and Workshops this system of heating is unsurpassed, as it is not only the means of keeping goods dry, but it also adds to the comfort of the workpeople, and thereby effects a saving in labour.

J. JONES & SONS recommend boilers of all kinds being set in brickwork, if possible; but portable boilers can be supplied, if required.

MATERIALS.—All Materials supplied will be of the best quality.

DELIVERY.—Boilers of various kinds, and pipes and connections, being always in stock, can, at a very short notice, be sent to any part.

FIXING.—The Fixing will be done by experienced men, fully capable of finishing properly any work they may undertake; and J. JONES & SONS are prepared to guarantee the effectual working of any apparatus fixed by their own men.

ESTIMATES.—Plans and Estimates will be sent on application.

A SECOND CENTURY OF ORCHIDACEOUS PLANTS,

Selected from the subjects published in Curtis's 'Botanical Magazine' since the issue of the 'First Century.'

Edited by JAMES BATEMAN, Esq., F.R.S.

To be completed in Ten Parts.

L. REEVE & CO., 5, HENRIETTA STREET, COVENT GARDEN.

AMBROISE VERSCHAFFELT, NURSERYMAN,
GHENT, BELGIUM,

OFFERS THE FOLLOWING NEW PLANTS.

GREENHOUSE.

AZALEA INDICA CRYSTALLINA.—Bright rose-salmon colour, finely spotted, very fine form and free bloomer, 12s.

CAMELLIA, MRS. DOMBRAIN (figured in the 'Illustration Horticole'; will be figured in the 'Floral Magazine').—Beautiful rose, extremely tender, and one of the finest imbricated forms, 12s.

NEW AUTUMNAL CHRYSANTHEMUMS (published in the 'Illustration Horticole').—Seven beautiful varieties, the set 16s.

HARDY.

ALNUS AUREA (the Golden Alder-tree).—This will be one of the finest trees. It is the common Alnus, with splendid golden leaves, 8s.

PEAR BEURRÉ DE FROMENTEL (figured in the 'Illustration Horticole').—One of the best Pears sent out, 8s. This fine Pear obtained several Prizes.

RHODODENDRON ARCHIDUC ÉTIENNE (lately figured in the 'Illustration Horticole').—Beautiful white flowers, with numerous black spots. Good plants, 12s.; strong plants, £1.

HARDY.

RHODODENDRON EXQUISITUM.—Light rose, with large red spots, very fine, 8s.

RHODODENDRON GRATIOSUM.—Lilac rosé, very delicate, with large spots, very fine, 8s.

RHODODENDRON MADAME RUDOLPH ABEL.—Great improvement on Rhododendron Prince Camille de Rohan; spots more distinct, very remarkable, 8s.

TEA ROSE ISABELLE SPRUNT (lately figured in the 'Illustration Horticole').—One of the best Tea Roses sent out, 8s.

WEIGELA PURPURATA.—One of the most distinct varieties obtained; the blooms are large, purplish red, and of much effect, 4s.

GYNERIUM ARGENTEUM FOLIIS VARIEGATIS.—I beg to offer fine well-rooted plants, grown in pots, of this beautiful true variegated Gynerium, which is the good variety sent out by Mr. Rendatler. Good plants, 7s. 6d.; six plants, £2.

The NEW GENERAL CATALOGUE, No. 79, is ready, and may be obtained free by writing to AMBROISE VERSCHAFFELT, Ghent, Belgium. A Coloured Drawing of the New Tea Rose Isabelle Sprunt may be also obtained free. AMBROISE VERSCHAFFELT recommends his Monthly Publication, the 'ILLUSTRATION HORTICOLE'. Each Number contains Three Coloured Plates of the Best and Newest Plants. Price 14s. 6d. a year, free. A Specimen Number may be obtained free.

BARR & SUGDEN'S AUTUMNAL FLORAL GUIDE

TO

WINTER AND SPRING GARDENING,

Contains a Treatise on "SPRING GARDENING," with Directions for Planting a series of Beds and Borders, with Early Flowering BULBS and PLANTS, the beauty and general effect of which will bear comparison with the gayest groups of our Summer and Autumn Blooming Plants, and may be had free by intending purchasers.

BULBS and PLANTS for SPRING BLOOMING.

100,000 HYACINTHS, 2s. 6d. to 3s. per doz., 18s. to 21s. per 100
100,000 NARCISSUS, 2s. 6d. to 3s. per doz., 18s. to 21s. per 100
100,000 TULIPS, 2s. 6d. to 3s. per doz., 18s. to 21s. per 100
100,000 SNOW DROPS, 1s. 6d. to 4s. per 100, 14s. to 30s. per 1000
10,000 SCILLA SIBERICA and AMENA, 2s. 6d. per doz., 18s. per 100
WINTER ACONITES, IRIS, ANEMONES, RANUNCULUS, SCILLAS, etc.
100,000 CLIVEDEN PANSIES, Blue, Purple, and Yellow, 4s. per doz., 30s. per 100

100,000 CLIVEDEN DAISIES, Pink, Red, and White, 2s. 6d. per doz., 21s. per 100
100,000 VARIEGATED ARABIS, a fine permanent colour, 2s. 6d. per doz., 21s. per 100
200,000 MYOSOTIS SYLVATICA (Forget-me-not), 1s. 6d. per doz., 10s. 6d. per 100
100,000 STACHYS LANATA, a fine permanent colour, 2s. 6d. per doz., 21s. per 100
POLYANTHES, WALLFLOWER, PHLOX, ALYSSUM, HEPATICAS, etc.

COLLECTIONS of BULBS for Blooming In-door Decoration, 10s. 6d., 15s. 6d., 21s., 30s., 42s., 63s., and 210s.
COLLECTIONS of BULBS for Out-door Decoration, 10s. 6d., 15s. 6d., 21s., 30s., 42s., 63s., and 210s.
COLLECTIONS of SPRING BLOOMING PLANTS, 12s. 6d., 25s., 50s., 100s. to 200s.

CYPELLA CÆRULEA.

Blue-flowered Cypella.

Nat. Ord. IRIDÆ.—TRIANDRIA TRIGYNIA.

Gen. Char. Perianthium corollinum, superum, 5-phyllum, laciniis basi concavis exterioribus majoribus patentibus, interioribus recurvis. Stamina 3, perigonii laciniis exterioribus basi inserta, filamentis brevissime coalitis subulatis. Antheræ oblongæ, basifixæ, loculis connectivum marginantibus. Ovarium inferum, oblongo-prismaticum, 3-loculare; stylus brevis, filiformis, stigmate dilatato 3-lobo, lobis erectis 3-fidis basi appendiculatis. Ovula plurima, in loculorum angulo centrali 2-seriata. Capsula membranacea, oblongo-prismatica, 3-locularis, loculicide 3-valvis. Semina plurima, angustata.—Herbæ perennes, Americæ tropicæ; rhizomate bulboso-tuberoso. Caulis erectus, foliatus, apice ramosus. Folia late lineari-lanceolata v. ensiformia. Flores magni, speciosi, laxè paniculati, spatha 2-phylla 1-flora.

CYPELLA *cærulea*; elata, foliis 3-6-pedalibus 1-1½ lin. latis ensiformibus obtusiusculis v. acuminatis, floribus cæruleis, 4 unc. diametro, perianthii laciniis exterioribus late oblongis, ungue aurantiaco brunneo fasciato, laciniis interioribus dimidio minoribus angustioribus, lamina cæruleo-venosa, ungue aurantiaco fasciato, stigmatis lobis acuminatis, raro 2-appendiculatis.

CYPELLA *cærulea*. *Seubert in Herb. Reg. Berol.*

MARICA *cærulea*. *Hook. Exot. Flora, f. 222. Bot. Reg. t. 713.*

A magnificent plant, native of the Brazils, long known in our gardens, though displaced of late by newer but far less attractive favourites. Whether for the boldness of its distichous sword-like foliage or the magnificence of its fine Iris-like flower, it is well worthy of a permanent place in our stoves. The plant from which the accompanying drawing was made was sent to the Royal Gardens from Bahia, by Mr. Williams, and flowered in September of the present year.

DESCR. *Leaves* three to six feet long, an inch to an inch and a half broad, striate, on a very stout caudex in our plant. equitant, bright green, acute or obtuse, sometimes acumi-

nate. *Flowers* paniced; *lower spathes* four to six inches long; *floral* two inches. *Flowers* variable in size, the fully-sized fully four inches in diameter. Outer *perianth-leaves* broadly oblong, obtuse, acute or apiculate; *blade* blue, sometimes blotched; *claw* yellowish, with transverse brown bands; *inner segments* about half as long as the outer, and much narrower proportionally; *claw* dirty-yellowish, with orange radiating bands; *limb* with radiating blue bands. *Stigma-lobes* bifid, each with a horn-like appendage at the base below.—*J. D. H.*

Fig. 1. Stamens, style, and stigmas. 2. Transverse section of ovary:—*both magnified.*

W. Fitch, del et lith

Vol. 2, p. 13

HELICONIA HUMILIS.

Dwarf Heliconia.

Nat. Ord. MUSACEÆ.—PENTANDRIA MONOGYNIA.

Gen. Char. Perianthium corollinum; foliola exteriora æqualia, basi connata; interiora lateralia subconformia, approximata, genitalia amplectentia, posticum nanum. Stamina 5, sexto abortiente nano, basi perigonii adnata. Ovarium 3-loculare; stylus filiformis, stigmatē obsolete 6-lobo. Ovula in loculis solitaria, e basi axeos adscendentia, anatropa. Capsula subdrupacea, 3-coeca, coccis osseis indehiscētib. Semina subglobosa, basifixā; albumen farinaceo-carnosum; embryo linearis, orthotropus.—Herbæ sæpius elatæ, Americæ tropicæ incolæ. Folia longe petiolata, petiolo basi vaginante scapum radicalem sæpe velante. Spathæ numerosæ, distichæ; axillis floriferis.

HELICONIA *humilis*; humilis, acaulis, petiolis longissimis, gracilibus, foliis oblongis oblongo-lanceolatisve breviter acuminatis basi cuneatis, scapo brevi radicali erecto, spathis 4-6 erecto-patentibus distichis subulato-lanceolatis rubris apice viridibus multifloris, perianthii foliolis linearibus angustis ex albo viridibus.

HELICONIA *humilis*. Jacq. Hort. Schœnb. t. 48, 49. Willd. Sp. Pl. v. 1. p. 1187. Rœm. and Sch. Syst. Veg. v. 5. p. 590.

MUSA *humilis*. Aubl. Guian. v. 2. p. 931.

Few plants are so well worthy of cultivation, for those who can afford space for the purpose, than the species of the magnificent genus *Heliconia*; they are easily managed, their beautiful foliage is evergreen, their brilliant flowering-bracts keep their colour for many weeks, and they may be rapidly increased by division of the rhizome. The present species is a native of Guiana, where it abounds in marshy places, and is called "petit Bahisia" by the French settlers, according to Aublet. Jacquin published an excellent figure and description of it in his 'Hortus Schœnbrunensis' so long ago as 1797, which appears to be the only figure extant. The specimen here figured flowered in the Royal Gardens, Kew, in September of the present year.

DESCR. *Rhizome* tuberous and creeping, covered with circular scars of fallen buds, giving off thick fleshy root-fibres. *Stem* none. *Leaves* all radical, on long slender petioles two to three feet long; *blade* one to two feet long, oblong linear-oblong or oblong-lanceolate, rather pale green, shortly abruptly acuminate, cuneate at the base. *Scape* short, radical, hidden amongst the leaves, erect, straight; flowering portion bright red, about a span long, bearing about four distichous spathes. *Spathes* erecto-patent, subulate from a broad base, nearly a span long, scarlet, with green stiff, almost pungent points, thick and hard, not striated. *Flowers* five to six in a spathe, two to three inches long, sessile, crowded; partial spathe membranous. *Perianth* white, green towards the apices of the narrow linear segments; *tube* short, cylindrical; *limb* two-lipped, upper leaflet concave, bifid, lower at length revolute at the apex; upper inner leaflet tridentate, lower very short.—*J. D. H.*

Fig. 1. Entire plant, *reduced*; anthers whitish. 2. Inflorescence. 3. Flowers. 4. Ovary, etc.:—*all magnified.*

CYPRIPEDIUM SCHLIMII.

Schlim's Lady's-slipper.

Nat. Ord. ORCHIDÆ.—GYNANDRIA MONANDRIA.

Gen. Char. (Vide supra, TAB. 5349.)

CYPRIPEDIUM (SELENIPIDIUM) *Schlimii*; foliis coriaceis ligulatis acutis subpedalibus pedunculo hirsuto nunc ramoso brevioribus; bracteis triangulis ancipitibus, ovario velutino, sepalis ovatis obtusis, superiore ovato, extus sericeo, inferiore subæquali (vel paulo majore) apice contracto cucullato, petalis sepalo summo majoribus, inferiori subæqualibus; labello elliptico-saccato ostio angusto; staminodio ovato pandurato apiculato, stigmatis labio superiori triangulo, inferiori retuso lobato. *Ex Reichenbach.*

SELENIPIDIUM *Schlimii*. *Rchb. in Pescatorea, t. 34. Xenia Orch. t. 44.*

This pretty New Granada *Cypripedium* bears the name of its discoverer, M. Schlim, one of M. Linden's most zealous collectors, who found it in "moist places," in the neighbourhood of Ocaña, at an elevation of four thousand feet above the sea-level. It first flowered in M. Linden's establishment in 1854. It was afterwards met with near La Cruz by Purdie, and on "dry banks" (!) according to the memorandum in the Hookerian herbarium. Possibly, however, the different season of the year at which the plant was gathered by the respective collectors may explain the seeming discrepancy. In this country it is still a rare plant, though it is easily grown in a mild temperature, especially if screened from the direct rays of the sun. It blooms in the late summer and autumn months, always—when in vigour—producing flower-stems with at least one lateral, a peculiarity that is not represented in the figure, and which does not exist in the dried specimens. The drawing is taken from a plant exhibited at South Kensington in August last by Mr. Bull.

As all the species of *Cypripedium* that have hitherto been found in intra-tropical America have in common the remarkable peculiarity of a three-celled ovary, Professor Reichenbach is anxious to raise them—under the name of *Selenipidium*—into a separate genus; but however loth I may feel to differ from my distinguished friend, I cannot as yet see my way to accepting *Selenipidium*, except as a subgenus, in which latter form it may very conveniently stand. The strong family resemblance between such plants as *C. lævigatum* from the Old World, and *C. caudatum* from the New, make it exceedingly difficult to believe they can be essentially different in structure.

There are still at the very least half-a-dozen noble *Cypripedia* to introduce from America south of the equator. Two of these (from the Quitensian Andes) are well figured in Reichenbach's 'Xenia,' under the name of *Selenipidium Hartwegii* and *S. Boissierianum*. As nothing so fine has yet reached us from the eastern hemisphere, we cannot but hope that some enterprising nurseryman will, ere long, add them to the treasures already in our stoves.

DESCR. A stemless terrestrial plant. There are from four to six leathery ligulate sharp-pointed *leaves*, a span to a foot long, from the centre of which issues the hirsute *flower-stem*, which is longer than the leaves, often branched, and generally bearing about half-a-dozen flowers, of which not more than two or three are usually in perfection at the same time. *Bracts* triangular, flattened, more than half the length of the ovary, which is itself covered with soft velvety hairs. *Sepals* less than an inch long, ovate-obtuse, nearly uniform, but the lower one is slightly larger, hooded, and contracted at top. *Petals* rather larger than in the upper, or about equal to the lower sepal, white (like the sepals), with streaks or spots of crimson on the inner side, and a faint dash of crimson behind. *Lip* formed of a large swollen elliptic bag or slipper with a contracted opening, white behind, but with a large blotch of deep rich crimson in front. *Sterile stamen* yellowish in front, ovate, panduriform, acuminate, having the upper lip of the *stigma* triangular, and the lower lip of the same bent backwards, and lobed.—*J. B.*

Fig. 1. Side-view of staminodium (sterile stamen). 2. Front view of ditto :—*magnified*.

HELIOTROPIUM CONVULVULACEUM.

Convolvulus-flowered Heliotrope.

Nat. Ord. BORAGINÆ.—PENTANDRIA MONOGYNIA.

Gen. Char. Calyx 5-partitus v. 5-dentatus, persistens. Corolla hypocraterimorpha, fauce pervia interdum barbata, laciniis plica simplici (rarissime dente interjecto) donatis. Stamina 5, tubo corollæ inserta. Ovarium 4-loculare; stylus brevis, stigmatе incrassato. Nuculæ 1-loculares, demum separabiles, receptaculo communi 0. Semina exalbuminosa, embryone inverso, cotyledonibus planis.—Herbæ v. suffrutices, glabræ pilosæ v. hispide. Folia sæpius alterna, integra v. denticulata. Cymæ unilaterales. Flores albi v. purpurascens.

HELIOTROPIUM convolvulaceum; annua, hispido-pilosa, caule ramoso ramis patentibus adscendentibus, foliis alternis ovato-oblongis v. oblongo-lanceolatis integerrimis acutis enerviis, floribus axillaribus subsolitariis v. in cymas breves paucifloras dispositis, corollæ tubo hispido, limbo amplo explanato, stigmatе capitato apice setoso, nuculis dimidiato-reniformibus perforatis.

HELIOTROPIUM convolvulaceum. *A. Gray in Proc. Am. Acad. v. 5. p. 340, et Mem. Amer. Acad. v. 6. p. 403.*

EUPLOCA convolvulacea. *Nutt. in Am. Phil. Trans. N. Ser. v. 5. p. 189. DC. Prodr. v. 9. p. 559. Hook. Ic. Pl. v. 7. t. 651.*

A curious and beautiful American annual, grown by Mr. Thompson, of Ipswich, with whom the specimen here figured flowered in September of the present year; it is a native of the Southern United States, New Mexico, and Arkansas, in which last State it was discovered by Nuttall, growing on sandy plains. The flowers, which are most abundantly produced, are sweet-scented, and open towards sunset like those of *mirabilis*.

DESCR. A much-branched, suberect annual, a span to two feet high, hoary all over with short rigid simple hairs. Stem and branches terete. Leaves half to one and a half inches long, very variable in shape, linear-oblong ovate ovate-orbicular or lanceolate, acute, narrowed or rounded at the base.

quite entire. *Flowers* axillary, solitary, very shortly pedicelled. *Calyx* quinquepartite; *lobes* linear, hispidly pilose, rather shorter than the tube. *Corolla* salver-shaped, plaited; *tube* contracted in the middle, pilose; *limb* one inch across, white, nearly flat, five-angled, angles subacute; *lobes* hairy along the back to the calyx; *throat* narrow. *Anthers* included, sessile, linear, pubescent at the tips. *Ovary* oblong-conic, four-celled, with a narrow adnate four-lobed concave disk at its base; *style* slender, stigma capitate, crowned with stiff erect bristles. *Capsule* small, enclosed in the persistent calyx-lobes.—*J. D. H.*

Fig. 1. Calyx. 2. Tube of corolla laid open. 3. Anther. 4. Germen and disk. 5. Transverse section of ovary:—*all magnified.*

Vincent Brooks, Imp

LYCASTE GIGANTEA.

Gigantic Lycaste.

Nat. Ord. ORCHIDÆ.—GYNANDRIA MONANDRIA.

Gen. Char. (Vide supra, TAB. 4193.)

LYCASTE *gigantea*; pseudobulbis maximis oblongo-ovatis glabris subcompressis 2-3-phyllis, foliis oblongo-lanceolatis acuminatis plicatis scapo vaginato unifloro longioribus, sepalis ovato-vel lineari-lanceolatis obtusiusculis, lateralibus falcatis petalis lanceolatis brevioribus, labelli oblongi lanceolati trilobi laciniis lateralibus elevatis acutis intermediâ serratâ panduriformi concavâ apice integrâ recurvâ multo brevioribus, callo unico emarginato sellæformi per hypochilium decurrente.

LYCASTE *gigantea*. *Lindl. in Benth. Pl. Hartweg. p. 153. Orch. Linden, p. 21. Bot. Reg. v. xxxix. (1843) p. 15; Id. v. xxx. Misc. 48.*

MAXILLARIA Heynderyxii. *Morr. Ann. 1845-9.*

This stately *Lycaste* is very extensively diffused, having been found in Central America by Hartweg,—near Santa Martha by Purdie,—and in the forests of Merida, at an elevation of 5-600 feet, by Linden. As might under such circumstances be expected there are many varieties differing in the size and colour of the flowers, and also—though to a less extent—in the size and form of the sepals and petals; the latter are usually of a yellowish-olive, while the velvety lip is of a dark rich maroon bordered with orange. The specimen figured was exhibited by Messrs. Veitch at South Kensington in July last.

All the *Lycastes* may be regarded as subterrestrial, and should therefore be accommodated with large pots. They are readily grown in a moderate temperature, but prefer the shadier parts of the orchid-house. With the exception of *L. Skinneri*—now such a universal favourite—*L. gigantea* is, perhaps, the best of its race.

DESCR. *Pseudobulbs* very large (sometimes six inches high), oblong-ovate, smooth, and slightly compressed, bearing two or

three large, deeply plicated oblong-lanceolate acuminate *leaves*, which are from half a yard to two feet long. *Scape* upright, one-flowered, partially sheathed (the upper sheath unguiculate and same length as the sepals), usually shorter than the leaves. *Sepals* ovate, or sometimes linear-lanceolate, rather blunted (those at the side being falcate) of a warm yellowish-olive. *Petals* lanceolate, rather shorter than the sepals and of the same olivaceous hue. *Lip* oblong-lanceolate, 3-lobed, the lateral lobes being elevated, acute, and much shorter than the central one, which is panduriform, serrated at the edges, depressed along the centre, but with its apex recurved; the lower portion of the lip is occupied by a transverse saddle-shaped emarginate callus; the colour of the lip is usually a rich maroon bordered with a narrow orange rim, the whole having quite the appearance of velvet.—*J. B.*

Fig. 1. Lip, *nat. size.*

COMBRETUM MICROPETALUM.

Small-petaled Combretum.

Nat. Ord. COMBRETACEÆ.—OCTANDRIA MONOGYNIA.

Gen. Char. Flores polygamo-dioici. Calycis tubus supra ovarium constrictus; limbus campanulatus, 4-5-fidus, deciduus. Petala 4-5, rarissime 0, parva, inter lobos corollæ inserta. Stamina 8 v. 10, 2-seriata, filamentis elongatis; antheræ parvæ. Ovarium 1-loculare; stylus subulatus, stigmatate simplici; ovula 2-6, ab apice loculi pendula. Fructus 4-6-gonus v. 4 6-pterus, 1-spermus. Semen elongatum.—Frutices, rarius arbores tropicæ, sæpissime scandentes. Folia opposita, rarius 3-4-natim verticillata, rarissime alterna, integerrima. Flores spicati v. racemosi.

COMBRETUM *micropetalum*; ramulis puberulis, foliis oppositis breviter petiolatis oblongis subacutis et apiculatis v. acuminatis, superne glabris subtus impresso-punctulatis junioribus pubescentibus, racemis axillaribus breviter pedunculatis multi-densifloris, floribus congestis secundis, pedicellis calycibusque dense lepidotis, petalis minutis.

COMBRETUM *micropetalum*. DC. *Prodr.* v. 3. p. 19. *St. Hil. Fl. Bras. Merid.* v. 2. p. 249.

A truly magnificent climber, native of Brazil, from Rio de Janeiro southward to the province of St. Paul, and northward to those of Minas Geraes and Goyoz. The specimen here figured is from a plant long cultivated by Dr. Moore in a greenhouse at Glasnevin, which annually bears a profusion of blossoms under his skilful management, and presents a very striking appearance. It flowers in September here, but in its native country in May and June. The genus *Combretum* is a very considerable one, embracing fully a hundred and twenty species, many of great beauty, and that would be great acquisitions to our stoves. The present plant comes very near to Don's *C. formosum*, published in 1822 in the fifteenth volume of the Linnean Transactions, but that is described as having a calyx pubescent with rusty down.

DESCR. A large *tree*, according to the description in St. Hilaire's 'Flora;' a tall rambling *climber* at Glasnevin Garden.

Branches terete, young clothed with lepidote scales. *Leaves* opposite, membranous, three to five inches long, variable in form, usually oblong, obtuse acute or acuminate, glabrous above, beneath covered with minute pale pits, and clothed with scales when young; *petiole* very short. *Racemes* spreading or refracted, four to five inches long, on short stout peduncles, axillary, simple, solitary; rhachis, pedicels, and calyx densely covered with lepidote scales. *Flowers* densely crowded, secund. *Calyx* green, one-third to half an inch long; *tube* slender, tetragonous; *limb* campanulate, four-lobed; *lobes* short, acute. *Petals* very minute, obovate, spathulate, acute. *Stamens* eight, three-quarters of an inch long, yellow, with orange anthers.—*J. D. H.*

NEW WORKS NOW READY.

HANDBOOK OF THE BRITISH FLORA; a Description of the Flowering Plants and Ferns indigenous to, or naturalized in, the British Isles. For the Use of Beginners and Amateurs. By **GEORGE BENTHAM**, F.R.S., President of the Linnean Society. *New Edition.* Crown 8vo, 12s.

BRITISH SPIDERS; an Introduction to the Study of the ARANEIDÆ of Great Britain and Ireland. By **E. F. STAVELEY**. Crown 8vo, 16 Plates, drawn expressly for the work, by **TUFFEN WEST**, containing Coloured Figures of nearly 100 Species, 10s. 6d.

BRITISH BEES; an Introduction to the Study of the Natural History and Economy of the Bees indigenous to the British Isles. By **W. E. SHUCKARD**. Crown 8vo, 16 Coloured Steel Plates, containing nearly 100 Figures Engraved from Natural Specimens expressly for the work, by **E. W. ROBINSON**, 10s. 6d.

BRITISH BEETLES; an Introduction to the Study of our Indigenous COLEOPTERA. By **E. C. RYE**. Crown 8vo, 16 Coloured Steel Plates, comprising Figures of nearly 100 Species Engraved from Natural Specimens expressly for the work, by **E. W. ROBINSON**, 10s. 6d.

BRITISH FERNS; an Introduction to the Study of the Ferns, Lycopods, and Equiseta indigenous to the British Isles. With chapters on the Structure, Propagation, Cultivation, Diseases, Uses, Preservation, and Distribution of Ferns. By **MARGARET PLUES**. Crown 8vo, 16 Coloured Plates, drawn expressly for the work, by **W. FITCH**, and 56 Wood-Engravings, 10s. 6d.

L. REEVE & CO., 5, HENRIETTA STREET, COVENT GARDEN.

Immediate Relief to Asthma, Consumption, Influenza, Coughs, Colds, and all Disorders of the Breath, Throat, and Lungs, is ensured by

Which have a most agreeable taste.

Cures of Coughs, Colds, and Asthma.

From **Mr. William J. Dale**, Chemist, 65, Queen Street, Portsea:—

“From the immense sale I have had of **Dr. Locock's Wafers** throughout this populous locality, I must do you the justice to say that I consider them invaluable for coughs, colds, asthma, etc.; and the overflowing testimony I have voluntarily received from all classes who have benefited by their virtues, fully warrants me in stating the above.—**W. J. DALE.**”

To Singers and Public Speakers they are invaluable for clearing and strengthening the voice.

Dr. Locock's Wafers are sold by every Medicine Dealer throughout the world, in boxes, at prices ranging from 1s. 1½d. to 11s., so as to meet the circumstances of all ranks. Be careful to see the name in the Government stamp.

UNDER ROYAL PATRONAGE.—**DR. LOCOCK'S POWDERS** for all DISORDERS of CHILDREN, from birth to twelve years of age. No family should be without them, in case of sudden illness at night or day. With every Packet is given Plain Rules for the Management and Diet of Infants in Sickness and in Health. Children cutting their teeth are speedily relieved by these Powders.

Sold by all Druggists, in Packets, at 1s. 1½d., 2s. 9d., and 4s. 6d.; or sent free by post for 1s. 3d., 3s., or 4s. 10d., by the Proprietors' Agents, **DA SILVA AND Co.**, 26, Bride Lane, Fleet Street, London, E.C.

DESTROY YOUR INSECT PESTS.

You may easily destroy all Plant Pests,

**Red Spider,
Mealy Bug,
Thrip,**

**Green and Black Fly,
American Blight,
Ants,**

**Scale,
Mildew,**

Without injury to the most delicate Plant or Tree, by using

FOWLER'S GARDENERS' INSECTICIDE,

Pronounced by all who have used it to be far superior to any other remedy.

ONE TRIAL WILL PROVE ITS EFFICACY.

Testimonials forwarded on application.

Price 1s. 6d., 3s., 5s. 6d., and 10s. per Tin.

GEORGE & THOMAS FOWLER, NORTH STREET, BRIGHTON,

AND OF

HOOPER & CO., COVENT GARDEN MARKET, LONDON.

HEATING BY HOT WATER.

It is now generally admitted that Buildings of any kind can be more effectually warmed by Hot Water than by any other means; but as so much depends on the way in which the Apparatus is fixed, it is of the greatest importance that it be done by experienced men.

J. JONES & SONS are prepared to estimate for Warming, to any extent—

GREENHOUSES.	CHURCHES.	FACTORIES.
CONSERVATORIES.	CHAPELS.	OFFICES.
VINERIES.	SCHOOLS.	WORKSHOPS.
HOTHOUSES.	READING ROOMS.	WAREHOUSES.
FORCING PITS.	LECTURE ROOMS.	DRYING ROOMS.
PEACH HOUSES.	BILLIARD ROOMS.	CELLARS.
PINE STOVES.	HALLS AND PASSAGES.	COACH-HOUSES.
ORCHARD HOUSES.	BATHS.	HARNESS ROOMS.

J. JONES & SONS' Apparatus is simple in construction, moderate in cost, and economical in working.

It is equally available for the Amateur's Greenhouse, or the longest range of Forcing Houses; for the smallest Chapel or the largest Church; for Private Offices, or those of Public Companies.

It is admirably adapted for Dwelling Houses, as coils of pipes can be placed in any part, for warming the various rooms. One or more Baths may be heated from the same boiler, and a constant supply of hot water obtained in any part of the house.

For Warehouses and Workshops this system of heating is unsurpassed, as it is not only the means of keeping goods dry, but it also adds to the comfort of the workpeople, and thereby effects a saving in labour.

J. JONES & SONS recommend boilers of all kinds being set in brickwork, if possible; but portable boilers can be supplied, if required.

MATERIALS.—All Materials supplied will be of the best quality.

DELIVERY.—Boilers of various kinds, and pipes and connections, being always in stock, can, at a very short notice, be sent to any part.

FIXING.—The Fixing will be done by experienced men, fully capable of finishing properly any work they may undertake; and J. JONES & SONS are prepared to guarantee the effectual working of any apparatus fixed by their own men.

ESTIMATES.—Plans and Estimates will be sent on application.

J. JONES & SONS,
IRON MERCHANTS AND HORTICULTURAL ENGINEERS,
