2018 PERENNIAL CATALOG AND PRICE LIST

FOR RETAIL LOCATIONS ONLY:

This price list does not correspond to the *bgperennials.com* online store. Certain perennials may be available for online purchase, and the online prices may vary from our retail locations.

A NOTE TO OUR CUSTOMERS:

The following is a list of perennial plants that Broadway Gardens expects to have in stock for the season. Customers should be aware that certain selections may not be available due to excess demand, crop failure, disruptions in supplier availability, or other unforeseen events. ***Prices are subject to change without notice. Availability of plant selections varies. Certain selections may be out of stock.***

The information provided herein regarding specific plant heights, zone hardiness, etc. was gleaned from the observations of a number of growers and botanical authorities. However, we have sometimes found considerable disagreement among authorities, particularly in regards to plant heights and zone hardiness for some species and cultivars which can be significantly influenced by such factors as variables in climate (and microclimates), soils, rainfall, irrigation and fertilization practices. Therefore, all information provided should be considered as estimates or averages and used as only a general guide. Do not be surprised if the performance of a plant in your garden deviates somewhat from what we have described. In fact, we would appreciate hearing what your experiences and observations are or have been in regards to such issues with particular plants.

DEER RESISTANT PERENNIALS

Note: Deer will sample almost anything, especially in the spring and late fall. Plants can only be considered deer resistant, not deer proof. Deer rely on their sense of smell to determine what to eat, and will always investigate freshly dug dirt. A wide variety of strong odors, especially with any new plantings, might confuse deer enough to cause them to leave your area to investigate elsewhere. There are no guarantees about what deer may or may not eat.

GUIDE TO PLANT POLLINATORS

METHODS TO MINIMIZE PESTICIDE IMPACT ON POLLINATORS

- **SET ACTIONS THRESHOLDS:** Decide at what point pest populations or conditions require action.
- **MONITOR AND IDENTIFY PESTS:** Identify pests and their risk accurately in order to take appropriate action when thresholds are reached.
- **PREVENTION:** Control pests before they become a problem through proper maintenance and sanitation.
- Use as little pesticides as needed.
- Identify and confirm hive locations.
- Don't forget to check for native bee nesting (along ground) and foraging sites.
- Maintain appropriate buffers between treated areas and pollinator habitat.
- Check with your state agriculture department or the pesticide regulation department for hives that might be located in your area.
- Select insecticides that have the lowest toxicity rating to bees whenever possible. (Organic does not mean Bee Safe! Many of the popular organic pesticides are just as toxic, if not more toxic, to bees as some of the lower strength Neonicotinoids)
- Spraying just about any type herbicide/ pesticide on bee foraging sites in the middle of a warm sunny day will kill a large amount of bees.
- Do not apply insecticides bees to blooming plants, including weeds, which have long residual toxicity to bees.
- Do not apply insecticides when unusually low or high temperatures or dew are in the forecast.
- Only apply pesticides after 4pm or early evening when bees are less active.
- Do not spray bee toxic pesticides on pollinator plants in bloom or near bloom!
- Do not use Neonicotinoid drenches or high concentration sprays on bee attracting plants ever!
- Do not use grub controls on lawn when clover is in bud or bloom.
- Consult the Xerces society website at www.xerces.org for comprehensive information on pollinators.

COMMON PESTICIDES THAT CAN BE TOXIC TO BEES

Pesticides that can be toxic to bees should be used cautiously to minimize adverse impact on plant pollination.

PLANTS POISONOUS TO HUMANS

These plants are considered TOXIC (poisonous, possibly dangerous). These plants contain a wide variety of poisons and symptoms may vary from mild to fatal. Contact the local Poison Center for more specific information on these or other plants that may not be on this list. Many other plants not listed here will cause Dermatitis (skin rash). Exercise caution when using these plants around children and pets! NOTE: Plants marked in bold are known to have caused human fatalities. This list is not comprehensive, but a compilation of frequently encountered plants.
