TAXONOMY		
Plant Family		
Scientific Name	Ranunculaceae ⁸	
Common Name	Buttercup Family ⁸	
Species Scientific		
Name		
Scientific Name	Coptis laciniata A. Gray	
Varieties	N/A	
Sub-species	N/A	
Cultivar	N/A	
Common Synonym(s)	N/A	
Common Name(s)	Cutleaf Goldthread ⁸	
	Oregon Goldthread ⁹	
Species Code (as per	COLA3 9	
USDA Plants		
database)		
GENERAL INFORMATION		
Geographical range		

While the rhizomes do sprout if plant is damaged, it is not fire tolerant due to its depth in soil. 10 Climate and elevation range Local habitat and abundance It is considered S3 vulnerable due to limited distribution in California. 6 Not listed federally. Common association with this species are: douglas fir, western hemlock, grand fir, shore pine, red-osier dogwood, Oregon grape, red huckleberry, evergreen violet, and other conifer forest species. It is late successional, which means it is the predominant groundcover in old growth forest stands. 10 Plant characteristics Plant characteristics See images at top of the pdf. Coptis laciniata can be differentiated from other goldthreads by its three deeply lobed and serrated leaflets. The leaves are longer that the flower stalks. Evergreen, flowers in March to April, with white flowers that produce 5-10 seeds in a ring shape. 3.7 In favorable conditions it will spread and create a dense groundcover. PROPAGATION DETAILS Ecotype N/A Propagation Goal Plant Propagation Method Vegetative division by rhizome or seed 10 Product Type Propagule Stock Type Container, ¼ gallon pots or smaller Time to Grow Late summer to fall Target Specifications Propagule Collection Seeds are very small and time consuming to collect in large

Propagule Collection Seeds are very small and time consuming to collect in large	-		
	agule Collection		
Instructions quantities. ¹⁰ Seed follicles will split and disperse seeds if left	structions		
mature for too long. Cut off seed head and collect in paper or fine			
mesh bag.			
Rhizome harvest preferred. 10 Collect around abundant patch from			
the edge, with a clean shear or razor. Only harvest one rhizome pe			
mother plant. Do not harvest same patch consecutively. Be very			
gentle when removing rhizome from soil, do not pull on mother			
plant and disturb top soil layer. Wrap in damp paper towel and kee			
moist until potted.			
Propagule Seeds could be sown right after harvest or kept in cold frame until	agule		
Processing/Propagule early spring. 4	•		
Characteristics Rhizomes should be potted in moist, organic media as soon as	0 1 0		
possible.			
Seeds are 2mm to 2.5mm long. ³			
Pre-Planting Propagule No known stratification requirement. Seeds are non-dormant and			
Treatments sown right away.	Planting Propagule		

- · ·		
Growing Area	Growing media should mimic forest floor composition with a	
Preparation / Annual	mixture of fine bark mulch and compost. Surface could be topped	
Practices for Perennial	with ½ inch depth of duff to encourage rhizome development.	
Crops	Plant is adapted to dense shade and consistent moisture. ¹⁰ Water	
	daily during summer months and keep under shade cloth. Do not	
	expose to full sun extensively. Keep plants inside greenhouse during	
	freezing temperatures.	
Establishment Phase	Sow seeds in a tray with peat moss. Do not sow too deep. Mist to	
Details	keep moist	
Length of Establishment	Seeds should germinate 1-3 months after sowing.	
Phase		
Active Growth Phase	Keep seedlings shaded. Actively remove competing weeds before	
	weed root interfere with seedlings or rhizome. Mist or water	
	seedlings often.	
Length of Active Growth	March to September	
Phase	Transplanted rhizome will unlikely to develop much above ground	
	during the first year. ⁴	
Hardening Phase	N/A	
Length of Hardening	N/A	
Phase		
Harvesting, Storage and	Roots are fragile and do not transplant well. Minimize disturbance	
Shipping	to rhizome and roots if harvest is required. Keep soil on roots when	
	planting.	
Length of Storage	Seeds are non-dormant and does not store well.	
Guidelines for	Unknown	
Outplanting /		
Performance on		
Typical Sites		
Other Comments	Rhizome has laxative properties and was used by Native Americans	
	to treat mouth sores. ¹⁰ Not commonly available in nurseries. Other	
	species of Coptis seems to acquire than Coptis laciniata.
