Tour Participants: Paul Harmes (leader) with eight Naturetrek clients

Day 1

Tuesday 20th March

Fly London to Malaga – Transfer to Ronda

Two tour group members arrived at Malaga Airport on the Easyjet flight, EZY8605, from Gatwick North Terminal, and two group members arrived from Bristol on Easyjet flight, EZY6051. Two further group members arrived from Sweden and the final two had been in Spain for a couple of days. Upon our collective arrival, we made our way to our vehicle, in the multi-storey car park.

We left Malaga airport, a north-easterly direction, on the main Seville Road, and turned north on the A357, the Malaga to Campillos road. We continued north-west, passing the 'white village' of Ardales on our left, and on to the junction with the A367, the Ronda road. Overhead, Barn Swallow and House Martin were seen. We stopped for a late lunch at the El Meson de Diego. After eating, we continued south-west on the A367, we passed through Cuevas del Becerro, before reaching the outskirts of Ronda. Along the way we had a quite heavy sleet, which settled for a very short time. At Ronda, we joined the A374, Seville road south-west for about eight kilometres to our final destination, the Hotel Cortijo Las Piletas, our accommodation for the week. We were met by Elisenda, our host, who quickly settled us into our rooms.

At 7.30pm we met up for drinks, and Paul outlined some of the activities we would be undertaking during our stay, before we went into dinner.

Day 2

Wednesday 21st March

Villaluenga del Rosario – Sierra del Pinar – Gargante Verde

After a superb breakfast, we met in the hotel car park, where we recorded a large number of Griffon Vultures and a Short-toed Snake Eagle, as well as Serin. Setting off, we drove towards village of Grazalema, turning south on the road to Ubrique, pausing at our first stop just before the town of Villaluenga del Rosario. Along the way we saw a number of Corn Buntings. Here we explored a scrubby roadside field, finding *Romulea bulbocodium* (a Sand Crocus), *Narcissus bulbocodium* (Hoop-petticoat Daffodil), the leaves of *Carduus cardunculus* (Cardoon) and the very common *Ulex parviflora* (Small-flowered Gorse). On the cliffs above us, Red-billed Chough could be heard calling.

Retracing our steps, we drove back towards Grazalema, making a second stop on a verge by some rough pasture. Here we saw a fine display of *Narcissus flavus*, which was spread across the fields and along the roadside

We now made our way through Grazalema, and onwards, a short distance from the town, to the car park at the start of our walk in the Sierra del Pinar. Along the way we added Black Redstart, which flew across in front of the vehicle. Leaving the car park, we began to make our way up through *Pinus halepensis* (Aleppo Pine), *Pinus pinaster* (Maritime Pine) forest, mixed with *Quercus* species (Oaks). *Daphne gnidium* (Mediterranean Daphne), the leaves of *Ptilostemon hispanicum* (Spanish Thistle), *Bupleurum spinosum*, *Bellis sylvestris* (Southern Daisy) and emerging *Teucrium polium* agg (Feltly Germander) were seen, as we made our way up to a Saddle, just below Cerro de San

Christobel. The views in all directions were spectacular, as was one of the few remaining native colonies of *Abies pinsapo* (Spanish Fir), which could be clearly seen from our vantage point. In addition, we also found, *Berberis hispanicus* (Spanish Barberry) and *Draba hispanica* (Spanish Whitlow-grass). Birds included Black Redstart, Robin, Blue Tit, Great Tit and clear views of Crested Tit

After our picnic lunch, we drove over the 'Puerto de las Palomas' (Pass of the Doves), and began the descent towards Zahara, stopping at the car park at the 'Gargana Verde'. Here, we saw *Ophrys fusca* subsp. *fusca* (Sombre Bee Orchid), *Myrtis communis* (Myrtle), *Ophrys tenthredinifera* (Sawfly Orchid), *Narcissus assoanus* (Rush-leaved Jonquil), *Ceratonia siliqua* (Carob) and *Fritillaria lusitanica* (Portuguese Fritillary). Sardinian Warbler, Griffon Vulture and Black Redstart and Blackcap were also seen.

The penultimate stop for the day was on a roadside by an arable margin, just below the town of Zahara. Here we found *Ecballium elaterium* (Squirting Cucumber), *Ophrys bombyliflora* (Bumblebee Orchid), *Mandragora autumnalis* (Mandrake), *Cynoglossum clandestinum* (a Hound's-tongue) *Scrophularia sambucifolia* (Elder-leaved Figwort) and *Calendula suffruticosa* (a Marigold). We made our final stop of the day at a very rough grazing field, by the turning to Las Mezas. Here we found *Himantoglossum robertianum* (Giant Orchid), *Ophrys omegajifera* (Omega Orchid) and *Aristolochia paucinervis* (a Birthwort).

From here, we set off back towards our hotel, in time to go out to dinner at the Hostal venta la Vega.

Day 3

Thursday 22nd March

El Burgo – Ardales – El Chorro

Today we travelled in the opposite direction, towards Ronda and taking the road towards the village of El Burgo. Our first stop was to the east of the 'Puerto del Viento' (Pass of the Wind). Here, we stopped to look at *Iris planifolia* (Broad-leaved Iris). Fortunately, there were still quite a few plants in flower. Some adjacent rocks had *Hornungia petraea* (Hutchinsia), *Viola demetria* and several clumps of the endemic *Biscutella frutescens* (Perennial Buckler Mustard), and some *Crataegus monogyna* (Hawthorn) bushes had been infested with *Viscum cruciatum* (Red-berried Mistletoe). Griffon Vulture was seen, and Red-billed Chough was heard.

Our next stop of the morning was at the Mirador del Guarda Forestal. Here the plants kept the group busy for some time, and included *Hyacinthoides hispanicus* (Spanish Bluebell), *Microthlaspi perfoliata* (Perfoliate Pennycress), *Erodium primulaeum* (a Stork's-bill), the leaves of *Phlomis purpurea* (Purple Phlomis), *Clematis cirrhosa* (Maidens Bower) and *Geranium purpureum* (Little Robin). Birds here included Blue Rock Thrush, Blackbird, Peregrine Falcon, Blue Tit, Crossbill and Black Redstart.

Continuing on to El Burgo, we made good time, before turning right and on towards Ardales. Along the way we saw Barn Swallow and Goldfinch. In Ardales, we noted *Nicotiana glauca* (Shrub Tobacco) on some waste ground and *Hyoscyamus albus* (White Henbane) on a wall.

We now took the road along the eastern shore of the Embalse del Conde de Guadalhorce lake, to our main objective, the 'Mirador de las Embalsas', where three reservoirs meet. Here we parked and began an exploration of the *Pinus halepensis* (Aleppo Pine) woodland, while Paul prepared our picnic. We found *Cistus albidus* (Grey-

leaved Cistus), *Narcissus cantabricus* (White Hoop-petticoat Daffodil), the Fumitory-like *Rupicapnos africana*, *Chaenorbinum villosum*, *Anthyllis cystoides* (Shrub Kidney Vetch). Birds here included Great Tit, Rock Bunting, Common Chaffinch and a pair of Crested Tit.

After our picnic lunch, we explored further afield, adding *Echium albicans* (a pink Viper's-bugloss), *Ranunculus spicatus* subsp. *blepharicarpos* (Rock Buttercup), *Fritillaria lusitanica* (Portuguese Fritillary), *Ophrys speculum* (Mirror Orchid), *Ophrys tenthredinifera* (Sawfly Orchid), *Muscari neglectum* (Grape Hyacinth), *Orchis anthropophora* (Man Orchid) and *Lathyrus chymenum*. The pleasant sunshine had brought out three butterfly species: Red Admiral, Small White and Western Dappled White.

We now made our way towards El Chorro, through a spectacular gorge, to the cafe by the Caminito del Rey (The King's Little Walk), to admire the geology of the gorge, and the precipitous 'walk-way' on the other side. Here we enjoyed refreshments and some botanising. We found *Adiantum capillus-veneris* (Maidenhair Fern), *Crambe filiformis* (Thin Sea Kale) and *Richardia intermedia*. Griffon Vultures were also present in good numbers.

It was now time to make our way back to base for dinner.

Day 4

Friday 23rd March

Sierra de Grazalema

This morning, we returned to the Grazalema area, beginning with three stops in the *Quercus* woodlands to the east of the town. At the first there was *Cistus monspeliensis* (Narrow-leaved Cistus), *Lavandula stoechas* (French Lavender), *Quercus faginea* (Beech-leaved Oak) and *Quercus suber* (Cork Oak), as well as another fine display by Griffon Vultures. At the second we added *Phillyrea angustifolia* (Narrow-leaved Phillyrea), *Cistus populifolius* (Poplar-leaved Cistus) and *Lithospermum arvense* (Corn Gromwell). The final stop produced *Cistus laurifolius* (Laurel-leaved Cistus), *Teucrium fruticans* (Shrub Germander), *Lonicera implexa* (a Honeysuckle) and *Cistus crispus*

Moving on, we parked on the south side of Grazalema. The plan was to explore the broad road verges. Above our heads, the occasional Griffon Vultures, Red-billed Chough were soaring. As we explored, *Narcissus papyraceus* (Paper-white Daffodil), *Ophrys tenthredinifera* (Sawfly Orchid), *Cerinthe major* var. *purpurescens* (Greater Honeywort) and *Arisarum vulgare* (Friar's Cowl) were all seen. The boulder-strewn fields produced Spotless Starlings and Stonechat.

By now cloud was rolling in and there was a rather chilly wind, so we made a stop in Grazalema for warm refreshments, before driving on up to the Mirador de las Acebuches and down to the Gargante Verde, for lunch. While Paul set up the picnic, we went to explore, finding Sardinian Warbler and Black Redstart.

With our meal complete, and the start of the rain, we went north towards Zahara, where we found *Orchis olbiensis* (an Early Purple Orchid), *Himantoglossum robertianum* (Giant Orchid) and *Rhamnus alaternus* (Mediterranean Buckthorn) on a verge bank. Blackcap and Garden Warbler were heard and Short-toed Treecreeper and Firecrest were seen.

Beginning our return journey, we stopped briefly below the Mirador de las Acebuches to see *Astragalus lusitanicus* (a Milk-vetch) and *Viburnum tinus* (Laurustinus), and above Grazalema, we encountered a group of Spanish Ibex.

Our final stop of the day was to the west of Montecorto, along a disused section of road. *Narcissus papyraceus* (Paper-white Daffodil), *Ophrys bombyliflora* (Bumblebee Orchid) and *Ophrys omegaifera* (Omega Orchid) were all present.

We now re-joined the vehicle and set off back to the Hotel, for dinner.

Day 5

Saturday 24th March

Sierra de las Nieves - Ronda

After breakfast, we headed off in a south-easterly direction towards San Pedro, and into the Sierra de las Nieves Natural Park. Our objective was the Los Quejigales recreation area, situated some 8km from the road. Along the way, we recorded a small group of Lesser Kestrels. The park road took us, initially, through *Quercus* woodland and shrubby scrub below, then on up through a mixture of *Pinus halepensis* and *Pinus pinaster* (Aleppo and Maritime Pine) woodland, before emerging above the tree line into an exposed limestone area. Our first stop was on a rocky, limestone road edge. Here we saw *Orchis olbiensis* (an Early Purple Orchid), *Gagea foliosa* (a Yellow Star of Bethlehem) and *Narcissus assoanus* (Rush-leaved Jonquil). The second stop we made was close to the Area Recreativa Los Quejigales. This is a wet grassy area which has a good colony of *Narcissus hispanicus* (Long-spathed Daffodil), scattered among small bushes. Also growing here was *Daphne laureola* (Surge Laurel).

Parking the vehicle at Los Quejigales, we had planned to walk from here, but, due to the rain and a strong cold wind, Paul decided it was not a good plan, so we retraced our steps, and explored another area on the descent. Very little birdlife was active, but we did see Rock Bunting, Mistle Thrush and Black Redstart.

After our descent, Paul decided that it would be rather unpleasant to have a picnic in the cold wind, so we visited a roadside Venta for our lunch.

After lunch, we had some time in Ronda. We parked in the car park on the north side of the town. We then walked down through the pedestrian precinct to the cliff-edge walk. Unfortunately, however, the walk way was closed, but we did see Red-billed Chough from the new bridge. At this point, Paul left us to explore Ronda at our leisure, before collecting us from a pre-arranged spot to return to the hotel for dinner.

Day 6

Sunday 25th March

El Torcal – Laguna Dulce – Tajo del Molino

Following an early breakfast, we left the hotel in heavy rain. Our route took us on the road north from Ronda towards Campillos. After about an hour, we joined the main Malaga to Antequera road, and continued via Campillos. Passing through Antequera, we made our way up to the summit of El Torcal, the highest point in the El Torcal de Antequera National Park, and parked by the Visitor Centre. We arrived in low cloud, sleet and rain, but it was evident that there had also been snow. It was rather atmospheric, and we were able to appreciate this

stunning 'Karst' limestone landscape. After we had had coffee, we set off to explore. We walked the shorter of the two circular walks, finding *Euphorbia characias* subsp. *characias* (Mediterranean Spurge) and two local endemics: the beautiful *Linaria anticaria* (a Toadflax), and the leaves of *Saxifraga biternata* (El Torcal Saxifrage). Continuing, we added *Rhamnus alaternus* (Mediterranean Buckthorn) and *Acer monspeliensis* (Montpelier Maple), as well as Rock Bunting, Robin and Black Redstart.

On our return to the visitor centre, we indulged in either coffee or soup, before re-joining our vehicle to begin our return journey towards Campillos, where we stopped at the Laguna Dulce for our picnic. During our lunch, we heard Cetti's Warbler and Greenfinch and saw Hoopoe, Crested Lark and Goldfinch. After eating, we scanned the lake finding, Greater Flamingo, Shoveler, Mallard, Coot, Little Grebe, Black-necked Grebe and Marsh Harrier. In the immediate area around the picnic site, we added *Carduus pycnocephalus* (Plymouth Thistle), *Nonea vesicaria* (Nonea), *Calendula suffruticosa* (a Marigold) and *Platycapnos spicatus*.

We now moved on to our last destination on the day near Teba, Tajo de Molino, where we explored the hillside, verge rocks and narrow gorge. *Mercurialis tomentosa* (Woolly Mercury), *Helichrysum stoechas* (Curry Plant), *Antirrhinum graniticum*, *Asphodelus fistulosa* (Small Asphodel) and *Ferula communis* (Giant Fennel) were all seen. In the gorge, Rock Dove, Red-billed Chough, Alpine Swift, Griffon Vulture and Corn Bunting were also added.

Dinner tonight was taken at the Bar – Restaurant "El Tropezon", at Montecorto.

Day 7

Monday 26th March

Cueva de la Pileta - Hidden Valley - Cerro de Tavizna

Today dawned bright and sunny, after overnight frost. Following another fine breakfast, we left the hotel and drove down towards Montejaque and on to Benaolan, joining the MA 549 to the 'Cueva de la Pileta' caves. After a brief look at the information board, we walked up the path and steps to the entrance, where tickets were purchased for our visit. The car park produced emerging *Calycotome villosa* (Prickly Broom) and *Linaria platycalyx*. Serin, Blue Tit, Greenfinch, Blackcap and Sardinian Warbler were also recorded, as well as a group of five Black Storks.

Our route now took us back to the small town of Montejaque, where we took a back road up to the 'Los Llanas de Libar', known to Paul as the 'Hidden Valley', in the Sierra de Montalata. A slow drive up the valley produced, male and female Stonechat, Rock Bunting and Cirl Bunting, as well as solitary Black Wheatear.

We parked at the top of the valley. Whilst Paul prepared lunch, the group explored some rocky outcrops, finding *Narcissus cuatreacasii* (Rock Jonquil), *Orchis olbiensis* (an Early Purple Orchid) and *Asplenium ceterach* (Rustyback). Overhead, Griffon Vultures drifted on thermals, and Red-billed Chough, Great Tit and Goldfinch were also present, and Raven was heard. After our picnic, we began a slow walk down the valley. We made a stop, at the bottom of the track to examine a high cliff, which produced *Saxifraga bourgaeana* (a Saxifrage), *Ornithogalum reverchonii* (an endemic Star of Bethlehem), *Narcissus cuatreacasii* (Rock Jonquil), and, *Fedia cornucopiae* (Fedia). A second stop on a verge, just outside the village, produced emerging *Antirrhinum barrelieri* (a Snapdragon), *Anagyris foetida* (Bean Trefoil), *Reseda undata* subsp. *gayana* (a Mignonette) and *Cytisus baetica* (a Broom). The warm sun had

encouraged butterflies to emerge, and we recorded Large White, Western Dappled White, Cleopatra, Spanish Festoon, Brimstone and Clouded Yellow.

Our final stop was below the Cerro de Tavizna, to explore a quiet rocky verge. On the outcrops, we found *Orchis olbiensis* (an Early Purple Orchid), *Vinca difformis* (Intermediate Periwinkle), *Saxifraga granulata* (Meadow Saxifrage), *Linaria tristis* (a Toadflax) and *Ranunculus macrophyllus* (Large-leaved Buttercup). Griffon Vulture and Red-billed Chough were also present.

It was now time to make our way back to the hotel, in time for dinner.

Day 8

Tuesday 27th March

Transfer from Ronda to Malaga – Fly to UK

After an early breakfast, we said our farewells to Elisenda and thanked her and Pedro for a wonderful stay in this beautiful area. We set off, in light cloud, for Malaga Airport in good time for our flights back to the UK, except Carol and James, who were staying on for another day in Spain.
