L

Barr's Daffodil Catalogue, 1921. PRACTICAL HINTS ON BULB CULTURE.

Culture for Spring-flowering Bulbs out of Doors.

Proper Condition of Soil.—Plant bulbs only when the ground is in a nice friable state, and never when the soil is wet and sticky; in such cases plant later when the soil is in a good friable condition. After digging or trenching, the ground should be allowed to settle at least ten days before planting.

Depth to Plant.—Failures with bulbs are most frequently due to their having been planted too deeply or too shallow. A good general rule to follow is to cover the bulb with soil once and a half to twice its own depth, *measuring the bulb* from base to shoulder. Thus a daffodil bulb measuring 2 inches from base to shoulder should be covered with 3 to 4 inches of soil. The principal exceptions to this rule are Crocuses, which prefer shallow planting, and Erythroniums, Snowdrops and Tulips, which require deeper planting. We give special directions for these bulbs in body of our General Bulb Catalogue.

Manure for Bulbs.—The ammonia in fresh stable manure is fatal to bulbs and is often the cause of failure in growing Tulips, Daffodils, etc., therefore only well-decayed stable or cow manure, or the material from an exhausted hot-bed, should be used. The best general manure for all bulbs growing outdoors is our PHYTOBROMA (which contains in suitable proportions Sulphate of Potash, Steamed Bone Flour, etc.); this should be forked into the ground at planting time at the rate of 3 oz. to the square yard, and a surface dressing of 3 oz. to the square yard applied early in spring (well hoed in) when top growth is showing. For heavy soils BASIC SLAG is good; this should be put in the ground with the bulbs at time of planting at the rate of $7\frac{1}{2}$ oz. to the square yard. For light and sandy soils CRUSHED BONES can be recommended, put into the ground at time of planting at the rate of 2 oz. to the square yard, and after planting sprinkle on the surface of the ground SULPHATE OF POTASH at the rate of $\frac{3}{4}$ oz. per square yard. On hot, dry and sandy soils, old stable manure may with advantage be used, as it gives humus and helps to retain moisture in the soil; it should be dug in 15 to 18 inches deep, so as not to come in contact with the bulbs. In the case of bulbs which have not been lifted we recommend a top dressing (well hoed in) of PHYTOBROMA or Steamed Bone Flour in November and again in January or early February, at the rate of 3 oz. to the square yard. *Price List of Manures will be found on page* 36.

Top Dressing.—Where possible, we advise a top dressing to all bulbs through the winter months of some light material such as long straw litter, cut heather, cut furze branches, or PEAT-FIBRE. *The advantage* of this light covering is that it keeps the surface soil sweet by preventing the heavy winter rains from beating down the earth's crust; it also protects any early top growth.

Lifting and Replanting.—When bulbs are lifted they should not, if possible, be replanted on the same ground, but where other bulbs or plants have previously been growing : thus, where Tulips have been growing last season, plant Daffodils this autumn, and so on.

Time to Plant.—Daffodils may be planted from middle of August to December, the later plantings generally blooming a week or fortnight later than the early plantings. The time of planting for other bulbs we give under the heading of each family in our General Bulb Catalogue.

Culture for Spring-flowering Bulbs in Pots or Boxes.

Time of Potting.—September and October are best months for potting most spring-flowering bulbs.

The best compost to use is a mixture of two-thirds good fibrous loam (which should be pulled to pieces by the hand, and not passed through a sieve) and one-third old decayed leaf soil, with a sprinkling of sharp silver sand, adding $1\frac{1}{2}$ lbs. of bone meal or 1 lb. of Phytobroma to every bushel of soil, which mix well together before using. In all cases the soil used should be fresh and sweet; never pot in soil that is wet or sticky. Our Peat-Fibre, Shell and Charcoal Mixture (see page 36) may also be used; it is light and cleanly to handle, and is a suitable medium for growing all kinds of spring-flowering bulbs in pots or vases, either for indoor decoration or for cutting.

Sterilising Soil.—In order to destroy all injurious insect life it is a good plan to sterilise potting soil before adding the Phytobroma or bonemeal. We recommend for this purpose the KONDINE SOIL STERILISER, or small quantities of soil can be easily sterilised in a sack by pouring over it a large kettle of boiling water and then spreading out the soil to dry. This will prevent a great deal of after trouble from worms or insects attacking the bulb roots.

The pots should be carefully washed and allowed to dry before using; new pots should be well soaked. Never plant in dirty or wet pots.

Good drainage should be secured by placing three or more pieces of charcoal (in preference to broken crocks) over the drainage hole, covering the charcoal or crocks with a little rough fibre from the loam. When boxes are used, the slit at bottom of box should be covered with pieces of charcoal, and a good layer of rough fibrous loam or leaf soil placed at bottom of box to ensure perfect drainage.

Covering the Bulbs.—The larger bulbs need not be quite covered with soil, the level of which should be half an inch below the rim of the pot, to allow of watering when the bulbs are in growth.

After potting, stand the pots or boxes outside in the open, on a firm bottom such as a bed of gravel or a gravel path to prevent the entrance of worms. They should then be surrounded and completely covered with Peat Fibre, Cocoa Fibre, or old decayed leaf soil (ashes from gas works are dangerous).

BARR'S DAFFODIL CATALOGUE, 1921.

CULTURE OF BULBS IN POTS OR BOXES-continued.

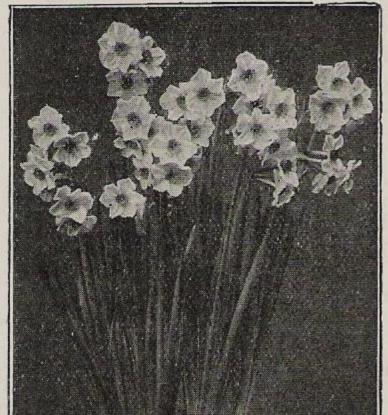

as being often very poisonous to plant life), the top of the pots being 2 inches below the surface of the covering material. This will secure a natural and moist condition to the bulbs and encourage root action. So long as the pots or boxes remain buried in this way they will require no watering.

The pots or boxes should remain plunged for about twelve weeks (Roman and Italian Hyacinths rather less), in order that the bulbs may get well rooted, after which portions may be removed indoors in succession, selecting first those which bloom naturally early. Place first in a cold frame, cool greenhouse or cold sitting-room free from draughts and keep partially shaded for a few days, giving water gradually. Very weak liquid manure-water may then be given once a week until they come into flower. Those that are wanted in bloom early may, after the flower buds are advanced, be placed in a warmer temperature, such as a slow forcing-house, but this should never exceed 65° if fine blooms are desired. The plants should always be kept as near to the glass as possible and not allowed to get drawn, from an insufficient supply of light or air. On no account should bottom heat be given. A frequent mistake made in forcing bulbs is that they are removed from the plunging-bed too early, before they have made a sufficient quantity of fibrous roots ; they are then at once subjected to heat, and failure is the result. It is a good plan, when bulbs are removed from the plunging-bed, to place an inverted flower-pot over them for a day or two to prevent any check from draughts to the young top growths.

Pot=Culture of Early Gladioli, Ixias, Morphixias, Sparaxis, Tritonias, etc. These bulbs start early into growth and therefore should not be potted up before the end of October to November. The pots should be plunged up to the rim only (not covered) in a cold frame, and protected with mats during severe frosty weather. There they should remain for about three months, after which the treatment is similar to that for spring-flowering bulbs.

Culture of Spring-flowering Bulbs in Vases and Bowls in Barr's New Peat-Fibre, Shell and Charcoal Mixture.

A charming effect can be obtained by growing spring-flowering bulbs in fancy vases and bowls, with or without drainage, by using our **Peat-Fibre Mixture** (5s. 6d. per bushel, 1s. 6d. per peck); the mixture is light, clean, and nice to handle, and *remains sweet* (an important matter where the vases used have no drainage holes); indeed, it is in every way preferable to soil for growing bulbs in bowls and vases.

Culture.—Fill the vase or bowl with the **Peat-Fibre Mixture** up to within a little below the rim, and plant the bulbs in the same manner as with ordinary potting soil; the mixture should be shaken down into place after planting and lightly watered, but should not be pressed down tightly, or the bulbs will be forced upwards when root growth commences.

After planting, adopt either of the following plans :---

(a) The bowls may be placed outdoors and covered entirely with Peat-Fibre or Cocoa fibre, leaving them thus for 8 to 12 weeks (Early Roman and Italian Hyacinths rather less), when the bulbs will have made good fibrous roots.

(b) Or the bulbs may be plunged in a cold frame, airy cellar, or out-house instead of outdoors; with this treatment, however, it will be necessary to occasionally give water.

(c) A third plan is to place the bowls after potting in a dark or moderately dark *airy* room, cool but not too cold; they must not be placed in a close cupboard or the bulbs will certainly suffer.

In the case of bowls plunged outdoors there will be no need to give any attention in the way of watering, as they will of course have abundance of moisture from the autumn rains. Where, however, the bulbs are not exposed to rain, the bowls should be examined once or twice a week, care being taken that the fibre mixture is kept uniformly damp; but for the first week or two after planting water should be given very sparingly, sufficient only to encourage root action. As soon as the bulbs are well rooted, water may be given more freely, the fibre mixture being then kept quite moist; if the mixture

2

MARCISSUS POETAZ ELVIRA growing in Barr's Peat-Fibre Mixture.

is allowed at any time to become dry, even for a day or two, the flower buds will probably become blind ; should by any chance too much water have been given, the bowls may be drained by carefully tipping them on their side. If obtainable, rain water is the best to use.

When the bulbs have made some top growth remove the bowls to the sunny window of a sittingroom, where they will get the morning sun, or put in a cool greenhouse close to the glass, as they must have sufficient light and air to prevent the foliage from becoming drawn. For a few days the bowls should be covered with tissue paper until the young growth has become accustomed to the light. Draughts and gas heat must be carefully avoided. No bottom heat should be given, and a temperature of 55° to 60° by day and 50° to 55° by night is sufficient to obtain good blooms; the bulbs resent too warm a temperature.

When growth is fairly advanced water occasionally with weak liquid manure, a tablespoonful of our Phytobroma to a gallon of water kept well stirred.

For Collections of Bulbs for Bowl Culture, see page 4 of this Catalogue and page 3 of our General Bulb Catalogue.

Naturalising Bulbs and Plants in Grass, Woodlands, etc.

CROCUSES NATURALISED IN GRASS IN A LONDON PARK.

This fascinating phase of gardening deserves more attention than has hitherto been bestowed upon it. No sight is more delightful than the fresh brightness of spring flowers growing freely in grass land or lending colour to woodland walks, hedgerows, and ditches, here and there nestling at the foot of trees, or establishing themselves on sloping banks.

For naturalising in grass spring flowers are especially suitable, as they bloom and are over before the grass grows tall enough to hide their beauty. Amongst our spring-flowering bulbs there are many gems which refuse to grow in cultivated borders, but when planted in grass, where they enjoy a cooler and more even temperature, they soon become established, and multiply freely until a regular colony is formed which greatly adds to the charm of the landscape.

All formality of arrangement should be avoided, the bulbs being scattered freely from the hand and planted where they fall. Large irregular breaks of one kind of bulb should be made in order to obtain the finest effect. In planting under trees, select spots where the soil is deepest and where the drip is least.

Those whose gardens are of limited size might make them very beautiful in spring, by utilising the fringes of their lawns and any grassy mounds or shady shrubbery walks for such spring favourites as Daffodils, Anemones, Scillas, Crocuses, Chionodoxas, etc., reserving the borders for Tulips and Lilies, etc., also summer and autumn-flowering herbaceous plants. In large gardens and parks ample opportunities are afforded for naturalising spring-flowering bulbs, and very beautiful results may be attained in this way.

In planting bulbs in grass, Barr's Bulb Planter (see page 36) should always be used. It cuts out a clean piece of turf, leaving a hole to receive the bulb, and on making the second cutting clears itself of the first piece of turf, which lies ready at hand for covering the bulb. This handy implement saves an immense amount of time, and does not, as with an ordinary dibber, leave a hard resting-place for the bulb, while by its use the grass is not in the least disturbed. Planting should not take place while the ground is hard, but after the first autumn rains. If the ground is poor, a compost of fresh soil with an abundance of Crushed Bones (7 lbs. to a bushel) or Phytobroma (3 lbs. to bushel) should be made and a little of the compost dropped into each hole before placing in the bulb, a little more should be given as a covering, and then the sod of turf be replaced and pressed down. The bulbs will then be given a fair start in their new quarters. It is advisable to cut the grass as late in autumn as possible, so as to ensure it being short at the time the bulbs flower. In meadowland spring-flowering bulbs in no way affect the hay crop, which may be cut at the usual season.

Among the many gems which lend themselves to wild gardening and naturalising, we would specially mention the following :---Alliums, Anemones, Anthericums, Chionodoxas, Crocuses, Cyclamen, Daffodils, Dog's Tooth Violets (Erythronium dens-canis), Fritillaries, Funkias, Helleborus, Hemerocallis, Irises (Tall and Dwarf Flag), Muscari, Ornithogalums, Scillas (early-flowering), Snowdrops (Galanthus), Mayflowering Cottage Tulips, and Wood Hyacinths (Late-flowering Scillas).

в

COLLECTIONS OF DAFFODILS FOR FLOWER BORDERS, POTS, AND BOWL CULTURE. **Barr's 27/6 Collection of Daffodils for Flower Borders.**

The following varieties are all beautiful in the flower border, and the selection embracing early and late varieties gives a good succession of bloom. All are suitable for pot culture and will give an equally ' fine display in the greenhouse or sitting-room.

6 Emperor 6 Golden Spur 6 Bicolor Horsfieldii Victoria .. 6 6 Incomp. Frank Miles Ladybird 6 19

 - 6 Codlins and Cream (double)

3 Bulbs each of the above 18 varieties for 14/-

Barr's 42/- Collection of Daffodils for Pot Culture.

The following Daffodils can be specially recommended for pot culture, and by gentle forcing a succession of bloom may be had through February and March, the selection containing early and later flowering varieties. If after flowering they are turned out of pots and carefully planted out (the ground being well watered previously, should it be dry) they will mostly flower well outdoors the following season. For Cultural Directions see pages 1 and 2.

Barr's Flower Border Mixture of Daffodils.

Although we are of opinion that a better effect is obtained by planting named varieties in separate groups, there are many who prefer a general mixture, especially for filling large beds, and the special mixture we offer here will be found admirably suited to this purpose.

Barr's Flower Border Mixture of Trumpets, Chalice Cup and Poet's Narcissi, strong flowering bulbs, per 100, 21/-; per doz., 3/-.

For cutting they are most valuableper 1000, 85/-; per 100, 9/6
 White Poet's Narcissi, in Mixture, comprising mostly varieties of Poeticus, suitable for naturalisation in grass, under trees, etc. Valuable for cutting.....per 1000, 90/-; per 100, 9/6

MINIATURE DAFFODILS FOR THE "ROCK GARDEN."

The following are charming little subjects for rockwork, where their dainty flowers are seen to perfection. They should be left undisturbed for years, and, if happy, will soon establish themselves and afford a lovely picture in early spring. The ground may be carpeted with close-growing surface-rooting plants, such as *Acana*, *Mossy Saxifragas*, and *Thymes*, etc.; these plants provide a natural protection for these little bulbs, besides keeping their dainty blooms from being splashed in rainy weather.

Full descriptions of the following Miniature Daffodils will be found in body of Catalogue.

Barr's New Seedling Daffodils Including New Varieties for 1921

The following list comprises some of the finest **New Seedling Daffodils** raised by ourselves and other well-known hybridists. We would specially draw attention to the following grand exhibition kinds: Alpine Snow, Aylmer, Ben Alder, Cyane, Danesfield, Gladiator, Golden Empress, Golden Sovereign, Harpagon, Kingdom, Latona, Loch Fyne, Masterpiece, Milk and Honey, Morning Glory, Mrs. D. V. West, Nannie Nunn, Nightingale, Orange Glory, Ormolu, Pearl of Dew, Phineus, Pixie, Primrose Gem, Ptolemy, Prince Arthur, Prince Fushimi, Prince Rupert, Raeburn, Ringdove, Royal Gold, Wendy, White Pearl, and White Star—all of great beauty.

We have been awarded for New Seedling Daffodils – The Engleheart Challenge Cup by the Royal Horticultural Society as First Prize for Twelve Best Seedling Daffodils not in commerce.

The Walter Ware Challenge Cup for the Best New Triandrus Hybrids. The R.H.S. Silver Standard Cup for the Best 12 New Seedling Daffodils

The relative qualities as we judge them are indicated by xx, xxx, xxxx, the highest quality flower being given the most marks. The figures after the names indicate the relative period of flowering, (1) being earliest, (6) being latest.

Barr's "Gold Medal" Daffodils AWARDED

Forty-nine Gold Medals and Three Silver Challenge Cups and Two R.H.S. Silver Cups for New Seedlings.

Also many First-class Certificates and other high awards.

For Alphabetical Index, see page 2 of Cover. New Seedling Varieties, see page 6.

Classification .- In the following pages we have practically adopted the 1910 classification of the R.H.S. Narcissus Committee, which we hope will be of assistance to exhibitors of Daffodils and to amateurs who desire to make a selection of distinct types. As will be seen, 10 distinct divisions have been made, together with a section (Div. XI.) at the end to take in a few unclassed species and hybrids. With each division we have given its distinguishing character.

Time of Flowering .- The relative period of flowering of the different varieties out of doors we have denoted by means of numbers after the names, (1) being the earliest, (6) being the latest.

Height.-The heights given in inches are as recorded at our Nurseries.

Quality of Flower.-Each season we go carefully over our Daffodil collection with a view to recording the quality of each variety. This we indicate by x, xx, xxx, and xxxx, giving the most marks to those we judge to be the finest. We trust this record may be found useful to amateurs in making their selections.

Cultural Marks.-* The varieties marked thus * thrive best under the shade of deciduous trees, naturalised in grass in shady nooks, or on grassy slopes facing north.

† Indicates those kinds which should be selected where Daffodils are grown in pots or for exhibition ; they are, however, in most cases also splendid border varieties.

§ Indicates those Daffodils which, beside being fine border plants, make a pretty effect when naturalised in grass; they are all strong growers and free bloomers.

Time to Plant.-The best time to plant, to obtain the finest flowers, is early autumn (as early as possible), although bulbs may be put in as late as Christmas with fairly satisfactory results; we have planted some Daffodils as late as the second week in February and had some very good blooms in May. We recommend, however, early planting for best results.

Depth to Plant.-Failures with bulbs are most frequently due to their having been planted too deeply or too shallow. A good general rule to follow is to cover the bulb with soil once and a half to twice its own depth, measuring the bulb from base to shoulder. Thus a daffodil bulb measuring 2 inches from base to shoulder should be covered with 3 to 4 inches of soil.

DIVISION I.—TRUMPET DAFFODILS.

DISTINGUISHING CHARACTER .- TRUMPET OR CROWN AS LONG AS OR LONGER THAN THE PERIANTH SEGMENTS. (A) YELLOW AND SULPHUR-COLOURED TRUMPET DAFFODILS. With Yellow, Lemon or Sulphur-coloured Trumpets, Perianth of same shade or lighter (but not white).

Yellow Trumpet Daffodils-continued.

| Minimus, true (1). We are glad to be again able to offer this little gem, the smallest and dwarfest of all Daffodils, producing outdoors in February dainty little trumpet flowers of a rich full yellow, height about 3 inches. It likes a peaty soil and may be naturalised on rockeries or in grass, or grown in pots or pans for the Alpine house. In 1887, during a tour in Spain, the late Mr. Peter Barr found this miniature Daffodil growing freely amongst gorse, with a south aspect. For our annual supply we have to depend upon collected bulbs which are taken up while the foliage is green ; in consequence | 8. | doz. d. | ea 8. | ch. d. |

(B) WHITE TRUMPET DAFFODILS.

Varieties with White Perianth and White or nearly White Trumpet.

Most of the Daffodils in this section thrive best in

LADY AUDREY.

fibrous virgin loam, mixed with well-decayed leaf-soil; generally speaking they dislike manure ; where, however, the soil is very poor, bone-meal or basic slag may be used (for full directions, see page 1). The varieties marked thus * thrive best in the shade of deciduous trees, naturalised in shady grassy nooks, or on grassy slopes facing north.

LARGE CHALICE-CUPPED DAFFODILS OR STAR NARCISSI.

14

INCOMPARABILIS LUCIFER. Example of Flower in Division II. DISTINGUISHING CHARACTER. - CUP OR CROWN MEASURING FROM ONE-THIRD TO NEARLY THE LENGTH OF THE PERIANTH SEGMENTS.

All the varieties have yellow or white perianth and yellow or red-stained cups.

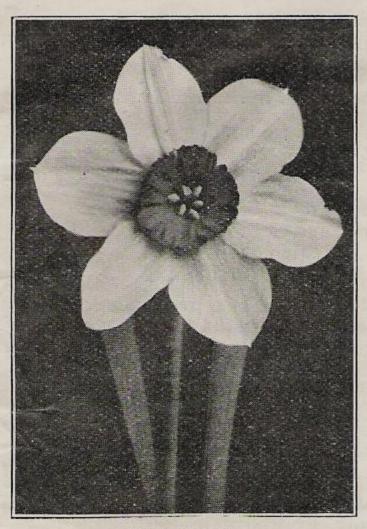

These beautiful **Star Narcissi** commence flowering in March, and furnish a succession of bloom throughout April. All are of elegant beauty, and as cut flowers are extensively used for furnishing vases and table bouquets. For this purpose they should be grown in quantity in boxes and forced for early bloom (*see pages* 1 and 2). They make charming pot plants, while in beds and borders they are very showy and naturalised in grass they produce a graceful effect. We illustrate Lucifer as an example of a flower in this Division.

Narcissus Incomparabilis - continued.

| Seauty (3), xx, a fine bold flower, perianth sulphur-yellow, with a deeper yellow bar down the centre, cup yellow margined orange-scarlet, tall, strong grower, ht. 23 in.; showy in beds and borders, and a useful variety for naturalising in grass, woodlands, | <i>s</i> . | doz. d. | . ea <i>s</i> . | ich. d. |

DIVISION III.—BARRII.

SHORT-CUPPED DAFFODILS, OR STAR NARCISSI.

(Including those hitherto classed as Burbidgei.)

DISTINGUISHING CHARACTER.—CUP OR CROWN MEASURING LESS THAN ONE-THIRD THE LENGTH OF THE PERIANTH SEGMENTS.

All the varieties have yellow or white perianth and yellow or red-stained cups.

For a long time trouble was being experienced in the placing of certain new seedlings under the **Barrii** and **Burbidgei** sections, as the two divisions ran so much into one another. The revising committee therefore decided to make only one section of them, retaining the name **Barrii**.

The chaste beauty of these shorter-cupped Narcissi is the more highly appreciated when the cut flowers are seen arranged in vases. The brilliancy of colouring in the cups of some, and the dainty elegance of others, render them all more or less valuable exhibition flowers. The cheaper kinds we can strongly recommend for beds and borders, and for naturalising in grass, woodlands, wild gardens, etc.

| †Adonia (6), xxx, perianth broad, soft-clear yellow cup, prettily fluted, deep orange-red, the colour not burning in the sun; ht. 17 in., a good free grower and | p s. | d. | | d. |

DIVISION IV.-LEEDSII.

EUCHARIS-FLOWERED OR SILVER-WHITE FRAGRANT STAR NARCISSI.

Comprising all Star Narcissi (large chalice-cupped and short-cupped) which have pure white or silvery white perianth segments and cup or crown white, cream, buff-orange, apricot or pale citron.

In the working out of the new classification, the revising committee felt that it would be unwise to break up this section and distribute it among the Incomparabilis and Barrii forms, seeing how distinct a "colour" section it was, and how well known to all Daffodil growers.

These chaste and beautiful Daffodils are highly prized for indoor decoration, while to cut for bouquets their fragrant flowers are greatly in demand. Plant 3 or 5 bulbs in a 5-inch pot. In flower beds and borders they are most charming, while naturalised in grass they produce a lovely effect.

TRIANDRUS ALBUS ON ROCKWORK.

DIVISION V.-TRIANDRUS AND TRIANDRUS HYBRIDS.

Under this division are placed Triandrus varieties and all hybrids obviously containing Triandrus blood.

The introduction of Triandrus blood in hybridising has resulted in such a very distinct group of hybrids that the Classification Committee of the R.H.S. deemed it advisable to make one section of them. For grace and beauty they are unsurpassed. We recommend them being given a situation partly shaded by trees, and if a little very fine dwarf grass seed is sown amongst them the beauty of their flowers is enhanced. Once planted they may remain undisturbed for years.

NARCISSUS TRIANDRUS.

The Cyclamen-flowered Daffodils with reflexing perianth.

THE DAINTY LITTLE "ANGEL'S TEARS" DAFFODIL (*Triandrus albus*) was found by the late Mr. Peter Barr on the mountains of Portugal and Spain, growing in very hard, firm, fine gritty soil sometimes in the narrowest fissures of granite and slatestone rocks. All in this section make lovely little pot plants (three or more bulbs in a pot), and grown thus should be given cold frame culture. Established on rockwork they form a picture full of grace and beauty. *They prefer shade, a gritty soil, and a well-drained position.*

NARCISSUS TRIANDRUS HYBRIDS.

Of these QUEEN OF SPAIN is a natural hybrid of *Triandrus albus* and a *wild trumpet Daffedil*. The other varieties have all been produced by using *Triandrus albus* or *calathinus* pollen on trumpet and other Daffodils. They form a distinct class, having flowers more or less drooping, of elegant form and graceful habit, clearly showing their *Triandrus* parentage.

§†Queen of Spain (3), xxx, a wild hybrid discovered per doz. each. 8. d. s. d. by the late Mr. Peter Barr in Spain. One of the most beautiful, distinct, and graceful Daffodils in cultivation, and recommended either for bedding, pot or vase culture, or for naturalising in woodlands, etc. The flowers vary slightly in size, but all are of a uniform soft, delicate, clear yellow, with a gracefully reflexing perianth, trumpet of distinct and elegant form, ht. 12 in. Naturalised in grass under trees this Daffodil forms a delightful feature in the garden. It also adapts itself readily to bowl culture in the Peat-fibre mixture, and grown thus affords an artistic decoration for the sitting-room. Owing to the bulbs having to be collected while the foliage is still green, some may not bloom the first year, but

DIVISION VI.-CYCLAMINEUS & CYCLAMINEUS HYBRIDS.

Seeing that **Cyclamineus** blood, like that of **Triandrus**, imparts such a distinct form to Daffodils, a separate division has been made for its hybrids. It has been used by many hybridisers as a parent, but very often the progeny has not been long-lived. Some hybrids, however, have now been raised with a good constitution such as **Orange Glory**, see page 8.

Cyclamineus (1), the Yellow Cyclamen-flowered Daffodil.

NARCISSUS POETAZ-NEW HYBRID POLYANTHUS NARCISSI.

New hybrids of Poeticus Ornatus imes Best Forms of Polyanthus Narcissi.

A fine race of Daffodils, resulting from a cross between Poeticus ornatus and the finest varieties of Polyanthus or Bunch-flowered Narcissi, the Poeticus being the seed-bearing parent. The plants are tall and vigorous growers, bearing heads of large well-formed flowers, deliciously fragrant; they are much finer than the old Polyanthus Narcissi, and have the advantage of being much hardier. In pots or the flower border they are very decorative, while the flowers are highly prized for cutting. They can easily be brought into bloom early by gentle forcing.

| Aspasia (3), xxx, producing four to five large bold flowers on a stem, with broad solid white perianth and golden cup, very prettily fluted, ht. 21 in | 3 | 6 | 0 | 4 |

DIVISION IX.-POETICUS.-True Poet's Narcissi.

These "POET'S DAFFODILS" or NARCISSI all have snowy white perianth segments or petals, and a small flattened eye or crown, yellow or lemon edged more or less deeply with scarlet or crimson, and sometimes almost all scarlet. All are sweetly scented.

The earlier flowering varieties afford a very beautiful decoration indoors when grown in pots (5 bulbs in a pot) or forced. As border plants and naturalised in grass by themselves the Poet's Narcissi produce a lovely effect.

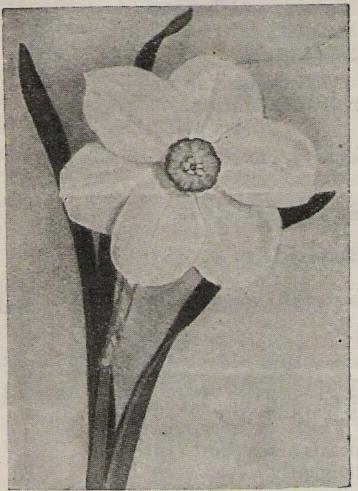

- Early planting and liberal culture is specially recommended for these Poet's Daffodils. To obtain tall stems and fine large flowers they should be grown in a rich deep soil not too dry. The varieties having very highly coloured crowns should be cut young to preserve the fine colouring.
- §† Caedmon (4), xxxx, a most striking and beautiful large flower with broad snowy per doz. each. white perianth of great substance, and a very bold centre broadly rimmed dark red s. d. s. d.

NERINES.

THE MOST BEAUTIFUL OF AUTUMN FLOWERS FOR THE GREENHOUSE.

For autumn decoration in the greenhouse few plants can compare with Nerines for their brilliant and attractive colours, which form a pleasing contrast to the prevailing tints of this period of the year.

A HYBRID NERINE.

The flowers, which are produced in umbels of 6 to 24 blooms, are borne on stout stems varying in height from 1 to 2 feet. In colour they range from *dark red*, *vivid crimson*, *cerise*, and *scarlet* to *salmon*, *coral-rose*, *pink*, *blush*, and *white*, many having a glistening lustre which in sunlight gives them the appearance of being dusted with gold or silver. In some cases the flowers have a well-defined bar or stripe running up centre of petal which adds to their charm. They remain decorative for many weeks, and their beauty may be enjoyed in a sitting-room as well as the greenhouse, if the pots are kept in a sunny window.

The cut spikes, which last fresh a long time, are greatly appreciated for table decoration associated with some light graceful foliage like that of Maidenhair Fern.

The varieties we offer below are mostly New Seedlings, comprising new shades of colour and new forms; they are freer bloomers, and in some cases of taller growth, and with larger flowers than any of the older kinds.

CULTURE.—Nerines can be very easily grown by any one who has a glass structure from which frost can be excluded. *Plenty of air and sunshine* are their principal requirements. After the bulbs have finished flowering, place the pots on an airy sunny shelf close to the glass, and encourage a free foliage growth by giving occasionally a little weak liquid manure. In April or May, when the foliage commences to turn yellow, cease giving water and allow the bulbs to ripen off in their pots. As soon as the plants show signs of making fresh growth in August or early September, stand the pots in saucers of water for a few

hours to ensure the soil being uniformly moist, and then give water sparingly until the flower spikes are well advanced.

Nerines bloom most freely when well established in pots. Re-pot every third or fourth year. In potting, put in plenty of crocks to ensure good drainage, and use a compost of two-thirds good loam and one-third sand, with a sprinkling of well-decayed leaf soil or old manure and bonemeal.

Our Exhibits of New Hybrid Nerines have been awarded by the R.H.S. a Silver Gilt and three Silver Medals, 1914 to 1920.

Hardy Spring-flowering Carpeting & Bedding Plants

To associate with Spring-flowering Bulbs in beds and borders.

For Spring decoration in association with bulbs the following plants will be found most useful. By their use as a groundwork or edging the most beautiful harmonies of colour may be obtained. Few sights in Spring are more beautiful than masses of the gold, white, and blue of the Alyssum, Arabis, and Aubrietia associated with breadths of Daffodils, Scillas, Muscaris, etc., or Forget-me-Nots (Myosotis) and Golden Polyanthuses mingling with Daffodils or with gorgeous and stately Darwin Tulips. The Acænas, Arenaria balearica, Herniaria glabra, Mossy Saxifragas, and Thymes make beautiful carpets of foliage for the smaller and daintier Spring bulbous flowers, such as Narcissus Triandrus, Chionodoxas, Small Crocus Species, etc.

We have also included in this list a few larger-growing plants specially recommended for the Hardy Flower Border to continue the display of bloom from Spring to early Summer.

| ACÆNA (New Zealand Bur), producing dense close carpets of evergreen foliage, rapid growers. each- | -8. | đ. |
|---|-----|----|
| Buchanani, foliage beautiful soft pea-green, ht. 2 in. | | |
| inermis, producing close cushion of bronzy grey-green foliage; an effective rapid carpeting plant | 0 | 9 |
| microphylla, very close-growing small bronze foliage covered in Summer and Autumn with crimson spiny balls; a good rock plant, ht. 1 in | | |
| ALYSSUM saxatile compactum (Gold Dust), covered during May with sheets of golden-yellow | | |
| flowers, ht. ½ ft | 0 | 9 |
| ,, ,, citrinum, masses of pretty lemon-yellow flowers, ht. ½ ft | 0 | 9 |
| ,, ,, fl. pl. (Double-flowered Gold Dust), producing sheets of rich golden colour, very handsome | 1 | 0 |
| ANDROSACE sarmentosa (Rock Jasmine), low growing pretty alpine, spreading habit, bearing dainty pink flowers; for sunny situations | 0 | 9 |
| ANTENARIA tomentosa (Snow in Summer), close compact evergreen growth of a silver-grey during Summer, quick grower, making a close dense carpet | 0 | 9 |
| ARABIS albida fl. pl., covered with sprays of double pure white sweet-scented flowers, ht. 3 ft.; a lovely subject for associating with Tulips | 0 | 9 |
| ARENARIA balearica, forming a close green carpet, 4 inch high; excellent for very small bulbous plants | 0 | 9 |
| ,, laricifolia, flowers white, fresh green foliage, 4 in., June-July flowering | 0 | 9 |
| ,, montana (Mountain Sandwort), large snow-white, May-June, ht. 6 in | | |
| ARMERIA maritima alba (White-flowered Dwarf Sea Thrift or Pink)per 100, 42/-; per doz. 5/6 | 0 | 6 |
| ,, Laucheana (Red-flowered Dwarf Sea Thrift or Pink) " 42/-; " 5/6 | 0 | 6 |
| AUBRIETIA (Rock Cress), valuable for associating with the golden Alyssum and white Arabis, ht. 3 to 4 in. | | |
| Dainty, a lovely new variety, raised at our Nurseries, soft blush-coloured flowers | 1 | 0 |
| Dr. Mules, deep violet-purple | 0 | 9 |
| Fire King, glowing crimson, very showy | 0 | 9 |
| Lavender, clear lavender-blue, beautiful cool colour | 0 | 9 |
| Mrs. Lloyd Edwards, bright purple, very free | | |
| Peter Barr, rich glowing purple | | |
| Wedding Veil, beautiful soft heliotrope flowers | 0 | 9 |
| CAMPANULA carpathica China Cup, large open flowers of a clear soft blue shade, ht. 6 in | | |
| cælestina, large soft blue flowers, very showy, ht. 9 in | | |
| Ditton Blue, large handsome deep blue flowers, ht. 1 ft | | |
| Isabel, deep violet-blue, ht. 9 in | | |
| Riverslea, large deep violet-blue flowers | | |
| G F Wilson, deep violet-blue, ht. 4 in | | |
| pusilla pallida, very dwarf prostrate habit, producing an abundance of dainty bell- | | |
| shaped pale blue flowers, ht. 3 in | 0 | 9 |
| ,, turbinata grandiflora, close prostrate growth, large blue bell-shaped flowers, ht. 6 in. | | |
| ,, ,, pallida, flowers soft Cambridge-blue, ht. 6 in | | |
| CANTERBURY Bells, mixed | | |
| CERASTIUM arvense compactum, very close prostrate green foliage with a mass of white blossoms | | |
| in early Summer; a charming plant for covering banks | 0 | 9 |
| tomentosum (Snow in Summer), foliage silvery grey, flowers white, ht. 4 in | 0 | 9 |

BULB BOWLS AND VASES,

for growing Spring-flowering Bulbs in Barr's Peat-fibre Mixture.

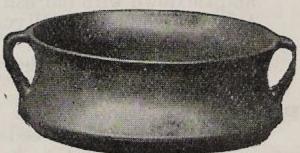

The vases are of elegant shape, and without drainage holes, thus saving the use of saucers. They will be found most useful for Daffodils, Hyacinths, Tulips, Crocuses, Early Scillas, Snowdrops, Chionodoxas, Iris Reticulata, Jonquils, etc., either for table decoration or the greenhouse. During Summer they may be used for standing little pot-plants in and other table decorations.

No. 7341.

MANURES, SOILS, PEAT-FIBRE, etc.

- **Barr's Phytobroma**, the best Manure for Daffodils, Hyacinths, Tulips, etc., and for Flower Borders generally. It should be mixed with the soil *below* the bulbs at planting time at the rate of 2 to 3 oz. to the square yard, and in spring, when the bulbs are showing above ground, a topdressing may be given of 3 oz. to the square yard. For Pots, mix *Phytobroma* with the soil, to be used at the rate of 1 lb. to the bushel, and in spring, when growth is showing, top-dress once a fortnight, using a small teaspoonful and well mixing with surface soil. Leaflet with' further particulars on application. 2-lb. carton 1/4, 7 lb. 3/6; 14 lb. 6/6; 28 lb. 11/6; 56 lb. 22/-; 112 lb. 42/-.

- Bone Flour, best quality, 7 lb. 2/3; 14 lb. 4/3; 28 lb. 8/-; 56 lb. 15/6; per cwt. 30/-.
- Nitrate of Soda, 7 lb. 3/6; 14 lb. 6/6; 28 lb. 12/6; 56 lb. 24/-; per cwt. 45/-.
- Sulphate of Ammonia, 7 lb. 3/3; 14 lb. 6/-; 28 lb. 11/6; 56 lb. 21/-; per cwt. 40/-.
- Sulphate of Iron, 7 lb. 2/6; 14 lb. 4/6; 28 lb. 8/6; 56 lb. 16/-; per cwt. 30/-.
- Sulphate of Potash, 7 lb. 4/6; 14 lb. 8/6; 28 lb. 16/-; 56 lb. 30/-.

Superphosphate of Lime, 7 lb. 1/6; 14 lb. 2/9; 28 lb. 5/-; 56 lb. 9/6; per cwt. 18/6.

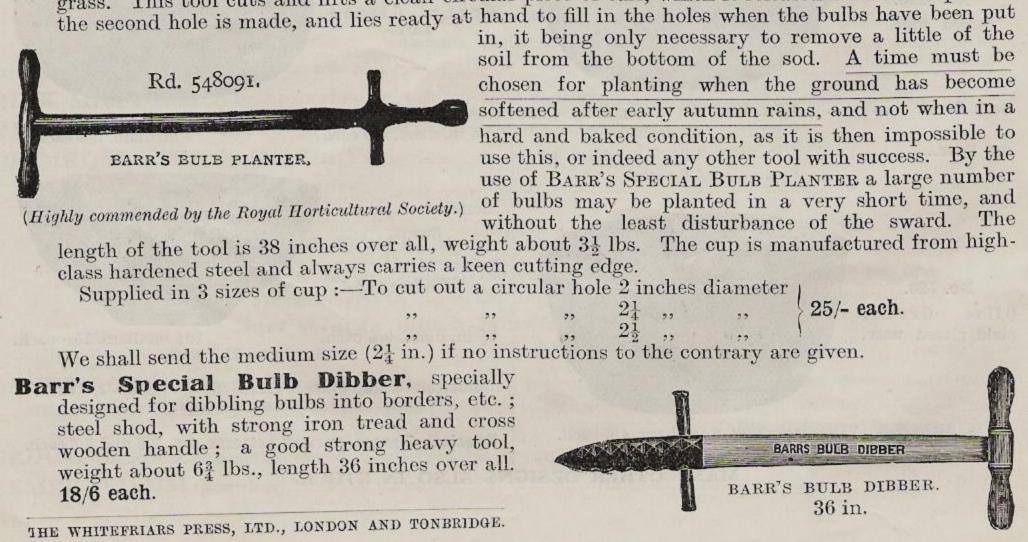

- Tipulite, soil fumigant and insecticide; destroys ants, leatherjackets, slugs, wireworm and all soil grubs; harmless to plant life. In tins 1/6 and 2/6 each; 7 lb. bags 3/6; 14 lb. 5/3; 28 lb. 7/6; 56 lb. 10/6; per cwt. 19/-.
- Vaporite, destroys wireworm, woodlice, and other injurious soil pests, small tin 1/6; about 7 lb. tin 3/9; about 14 lb. 5/6; about 28 lb. 8/-; ½ cwt. 11/3; 1 cwt. 17/6. Full particulars on application.
- Loam, Peat, Leaf Soil, Silver Sand, each, per bushel 4/6.
- Lime, fine ground, 28 lb. 3/-; 56 lb. 5/6; per cwt. 10/6.

Limbux, a specially treated white Lime Flour, 7 lb. 2/6; 14 lb. 4/6; 28 lb. 8/3; per cwt. 21/-.

- Barr's Specially Prepared Potting Soil, containing a suitable quantity of Phytobroma, per bushel 4/6.
- **Barr's Improved Peat-fibre, Shell, and Charcoal Mixture** for growing Bulbs in Bowls, Jardinets, Glasses, etc. In the case of glasses, half fill with the Fibre Mixture, and add water till no more can be absorbed. Place the bulb so as to rest the base on the preparation, and tie down with old fish netting or other material, leaving an opening in the centre for the shoot. When the bulb has well rooted the covering may be removed; care must be taken that the material in the glass is kept moist. The same remarks apply to bulbs grown in bowls, etc. : they must be kept in place till they have rooted. Our Fibre Mixture is sent out *ready for use*. **Per bushel 5/6; per peck 1/6**.
- **Peat-fibre**, recommended in preference to Cocoa-fibre for plunging bowls, pots, etc., and as a winter mulch to bulb-beds, etc., per bushel 2/6.
- Small Pebbles and Charcoal, suitable for growing Hyacinths, etc., in bowls and vases without drainage, per quart 8d.; per peck 4/6.
- Charcoal (fine twig), per peck 1/6; per bushel 5/6.

TWO USEFUL TOOLS FOR DAFFODIL PLANTING.

Barr's Special Bulb Planter, specially designed for planting Daffodils and other bulbs in grass. This tool cuts and lifts a clean circular piece of turf, which is released from the cup when
