

Red Oak Leaf Holly

Ilex x 'Conaf'

- **Use:** A hybrid holly with a tall, elegant, pyramidal form and charming oak leaf-like foliage that emerges bronze to burgundy in spring and matures to emerald green. Sets small orange-red ornamental berries without needing a male pollinizer. Use to create a stunning, cold-hardy, tall hedge or as a landscape specimen.
- **Exposure/Soil:** Full sun to part shade. Use slow release fertilizer for best results. Water if it hasn't rained in 2 weeks.
- **Growth:** Fast growing; reaches 14 ft. tall, 8 ft. wide. Can be kept a few years in large planters.
- **Hardiness:** Zone 6-9; Shrub
- **Foliage:** Evergreen. This upright growing holly has leaves that are bronze to burgundy as they emerge in spring and retain this coloration for a couple of weeks in early spring.
- **Flower:** Unlike most hollies, Oak Leaf™ Holly contains both male and female flower parts in each flower. Therefore, each plant is self-fruitful without need for a male plant to provide pollen. The small, greenish-white flower clusters produce pea-sized berries that are orange-red and persist through most of the winter.

An outstanding choice for screens, specimens or large foundation plantings.
