

Agastache hybrids

Height: 1.2m
Spread: 80cm

FULL SUN

MIXED BORDERS

CONTAINER

AROMATIC FOLIAGE

BIRD ATTRACTING

POLLINATOR FRIENDLY

DRY TOLERANT

FEATURES:

- Majestic display of long flowering stems topped by floral spikes which are large and showy.
- Tough, dry tolerant, fast growing.
- Bright coloured flowering selections providing a visual feast from summer through to autumn.
- Rich in nectar, attracting birds and butterflies.
- Foliage releases a minty fragrance when crushed or handled.

SUGGESTED USES:

- Fast results for new gardens.
- Ideal for water wise or low maintenance gardens.
- Suitable for containers and general garden use.

CULTURAL CARE

Easy to grow in most soil types which are well draining. Low water needs once established requiring only occasional long soak during extended periods of heat. Semi herbaceous in cool climate during winter. Cut back older foliage at start of spring when new growth appears and apply a slow release fertiliser. Mulching around plant will help retain moisture during dry periods.

Commonly known as *Hyssop* or *Hummingbird Mint*, Agastache is a genus of aromatic perennials primarily originating from regions of North America. Agastache derives from Greek *agan* - 'much' and *stachys* 'grain stalk' in reference to the numerous flowering stems. Trouble free and easy to grow for mixed borders where stunning late season displays can be achieved mixing with Euphorbia 'Silver Swan', Phlox 'Minnie Pearl', Salvia HEATWAVE varieties along with Stokesia 'Blue Parasols'. Shorter, more compact varieties of agastache - such as those found in the FIESTA range - can also be used in front for added colour combinations whilst continuing to add bulk to the front of a mixed garden display. Agastaches planted near vegetable patches or fruit trees are also beneficial as they are terrific for attracting pollinators.
