Our experience is your result!

Straathof Young Plants is an export business that has developed through many years of specialisation in chrysanthemum growing. And we increase possibilities everyday. The excellent quality of our products is the result of extensive know-how in the fields of breeding, propagation and innovation. Carefree and personal trade in Dutch young plants; that's what we stand for.

Typically Dutch

Our production centres in the Netherlands, Kenya, Tanzania, South Africa, Uganda, Ethiopia and other countries are all highly efficient and equipped to the latest standards of technology. They are managed by experts from the Netherlands, the world's leading country in terms of floriculture and cultivation technology. The first class end products promise optimal returns in terms of cropping and profitability. We are valued by our customers because of our Dutch way of doing business: we offer solutions thinking, our deeds reflect our words and we make more possible for our customers.

One-stop-shop for flourishing trade

We offer an innovative and market-oriented assortment of high quality, virus and disease free cuttings, which is subject to continuous upgrading. Straathof Young Plants acts as a one-stop-shop for European growers who want easy and quick access to high quality Dutch young plants. Our family business, originated in 1960, is strong on personal contact with our customers. We strive for short lines and long-term relationships. That paves the way to an optimal transfer of technical support and knowledge about production, innovation and development.

Network of knowledge

We traditionally maintain close links with the Dümme Orange Group, global market leader in the sale, breeding, marketing and licensing management of an extensive range of potted and cut chrysanthemums and other ornamental plants. During the years, we have also built deep relationships with other suppliers, such as Florensis Cut Flowers, Schneider Youngplants, Dekker Chrysanten, Floritec and Royal van Zanten. Straathof Young Plants is also the European distributor for outdoors

Fiduga, Uganda

chrysanthemums and summer flowers produced by respected Dutch growers, who belong to a carefully constructed network.

Trusted partner

In 2005, Straathof Young Plants acquired Greneth Plants, specialized in the export of young plants to Greece, Eastern Europe and the Middle East. This implied a valuable extension of our network and knowledge. In 2019 the two companies merged into Straathof Young Plants. Together we solve your logistic challenges throughout Europe and far beyond. With our personal approach Straathof Young Plants gives a face to the Dutch market of high quality young plants. Our tradition of maximum exchange of knowledge makes us both ready and able to be your trusted partner and to improve and increase your profits.

We look forward to doing business with you.

Лицензия

This is a licensed variety. The reproduction or sale of licensed plant material is subject to the terms of a license agreement with the breeder.

Die Sorte ist eine Lizenzsorte. Erlaubnis zum Vermehren oder Verkauf von Pflanzenmaterial mit Lizenz kann man nur mit einem unterschriebenen Lizenzvertrag vom Veredler (Breeder) bekommen.

La varietà è una varietà brevettata. Per un permesso di propogazione o di vendita dei prodotti delle piante brevettate si ha bisogno d'un accordo firmato dal coltivatore.

Estas variedades están sujetas a derechos de concesión. Para poder reproducir o vender material en licencia, hay que firmar un acuerdo de concesión con el licenciatario.

Это лицензированный сорт. Воспроизведение или продажа лицензированного растительного материала регулируется условиями лицензионного соглашения с селекционером.

Temperature group

The varieties have been graded into temperatures groups. '6' means the highest tolerance to low temperatures and '1' means a low tolerance to low temperatures. These results have been obtained under conditions prevailing in North-western Europe in winter, where

sensitivity to low light intensity in creases sensitivity to low temperatures.

Santini

Varieties suited for Santini culture have a maximum stem length of 55 cm and a flat spray formation with small flowers, to a maximum of 4 cm. This makes

them excellent for use in mixed bouquets. However, a bouquet of Santinis used alone in a vase will look wonderful because of their high ornamental value.

Plant week

Plant week under Dutch circumstances in a greenhouse without assimilation light.

Temperatur

Die Sorten sind in Gruppen mit derselben Temperatur eingeteilt. '6' bedeutet höchste Toleranz bei niedrigen Temperaturen und '1' bedeutet niedrige Toleranz bei niedrigen Temperaturen. Diese Angaben gelten unter allgemeinen Bedingungen in Nordwesteuropa im Winter, wo Empfindlichkeit

für helle Lichtintensität die Empfindlichkeit für niedrige Temperaturen erhöht.

Santini

Sorten geeignet für Santinikultur. Zum Schnitt hat die Santini eine maximale Stiellänge von 55 cm und einen flachen Blütenaufbau mit kleinen Blüten von maximal 4 cm. Deswegen eignen sie

sich so ausgezeichnet für gemischte Bukette, aber auch nur Santini's alleine im Bukett sehen wegen ihres hohen Zierwertes in einer Vase sehr hübsch aus.

Pflanzwoche

Pflanzwoche unter holländischen Gewächshauskonditionen ohne Assimilationslicht.

Gruppo di temperatura

Le varietà sono state ordinate in gruppi di temperatura. Un '6' significa la tolleranza più alta a proposito delle temperature basse mentre l' '1' vuol dire poca tolleranza per le temperature basse. Questi risultati sono stati ottenuti sotto condizini comuni nell'Europa settentrionale e occidentale in inverno, dove la sensitività per una bassa

intensità di luce aumenta la sensitività per le temperature basse.

Santini

Una varietà adatta a coltivazione Santini. Tagliati, gli steli dei Santini hanno una lunghezza massima di 55 cm e una formazione spray piatto a piccoli fiori che misura al massimo 4 cm. Grazie a questo

sono molto adatti per l'uso nei mazzi misti, ma anche un mazzo composto esclusivamente da Santini fornirà un bellissimo vaso di fiori, grazie al loro valore altamente ornamentale.

Settimana di piantagione

Piantare la settimana sotto le circostanze olandesi in una serra senza l'esposizione di assimilazione.

Temperatura

Las variedades están clasificadas según su resistencia a temperaturas bajas. '6' indica la máxima resistencia a temperaturas bajas y '1' indica la menor resistencia. Los resultados han sido obtenidos bajo las condiciones climatológicas del noroeste de Europa en invierno,

donde la baja intensidad de la luz implica mayor sensibilidad a temperaturas bajas.

Santini

Las variedades que son aptas para el cultivo de Santinis presentan tallos con un largo máximo de 55 cm y racimos de pequeñas flores que miden como máximo 4 cm. Por este

motivo son muy aptos para ramos mixtos, pero también un florero con sólo Santinis será espectacular por su alto valor decorativo.

Semana de Plantación

Semana de plantación, en condiciones holandesas, en invernadero sin luz de asimilación.

Температура

Сорта были классифицированы по температурным группам. 6 означает самую высокую устойчивость к низким температурам, а 1 означает низкую устойчивость к низким температурам. Эти результаты были получены в условиях, преобладающих зимой в северо-западной Европе, где

чувствительность к низкой интенсивности света повышает чувствительность к низким температурам.

Сантини

Сорта, подходящие для культуры Сантини, имеют максимальную длину стебля 55 см и плоскую форму с мелкими цветами, максимум до 4 см. Это делает

их превосходными для использования в смешанных букетах. Тем не менее, моно-букет Сантини будет прекрасно смотреться благодаря своему декоративному виду.

Неделя посадки

Неделя посадки при голландских условиях в теплице без ассимиляционного света.

Response time

The response time indicates the number of weeks between the beginning of the short day period and the flowering date, at normal temperature and light intensity.

Reaktionszeit

Die Reaktionszeit gibt die Anzahl Wochen zwischen dem Anfang der Kurztagsperiode und dem Blütedatum an, bei normaler Temperatur und heller Lichtintensivität.

Termine di reazione

Il termine di reazione indica quante settimane ci vogliono dall'inizio del fotoperiodo corto fino alla data di fioritura, dato una temperatura e un'intensità di luce normale.

Respuesta

Respuesta se refiere a la cantidad de semanas trans-curridas entre el principio del periodo de días cortos y el momento de la flora-ción, bajo temperaturas e intensidad de luz normales.

Время отклика

Время отклика указывает на количество недель между началом короткого дневного периода и даты цветения при нормальной температуре и интенсивности света.

Vigour group

'7' is used for the most vigorous varieties and a lower number for the less vigorous ones.

Wuchs

'7' zeigt den kräftigsten Wuchs und eine niedrigere Zahl den weniger kräftigen Wuchs einer Sorte an.

Gruppo di resistenza

Il '7' viene usato per le varietà più resistenti e per le varietà meno forti vengono usati dei numeri più bassi.

Vigor

El '7' indica que se trata de una de las variedades más vigorosas mientras que las menos vigorosas se indican con números más bajos.

Интенсивность роста

7 используется для самых энергичных сортов и меньшее число для менее энергичных.
