# Unlimited in Varieties, offering Unlimited Possibilities

**Anthura is the worldwide specialist in Anthurium and Orchids.** With our extensive knowledge of genetics and young plants, we provide growers with everything they need for a sustainable and profitable chain.

**As a breeder and propagator,** we are constantly working on the development of new techniques to achieve these goals. In addition, we stimulate entrepreneurship, make the chain more sustainable and cooperate internationally. This vision is applied to our locations in the Netherlands, Germany, North-Macedonia and China.

**Our Research & Development department** has sequenced and mapped the DNA of Orchids and Anthurium in 2018. A unique milestone in horticulture. We have now invested in the infrastructure, technology and people to translate this breakthrough into a more sustainable production

of Anthuriums and Orchids, an increase of your return on investment, and to fulfil the needs of other chain partners and consumer preferences worldwide.

**Years of focus on innovative and sustainable product development** have resulted in an unlimited assortment of strong and colourful varieties with a long flowering period.

**Pioneering for success together with you** is a huge motivator. Together we develop a strategy to make you our primary focus in the market.

**Hundreds of growers in professional horticulture grow our colourful varieties, allowing millions of consumers to enjoy beautiful plants and flowers.**

# Sustainable entrepreneurship is in our DNA

We continuously strive to make innovative improvements in our production processes. We are committed to reducing our environmental impact through the development of varieties that can be produced with less energy and fewer water and plant protection products due to built-in resistances and improved product properties.

‘Sustainability is a cornerstone of our mission’

**However, it goes further than this.** Due to an intrinsic drive we are dedicated, on both national as international level, to several projects in the field of biodiversity and other sustainable development goals.

**Sustainability is high on our agenda.** This is also recognized outside the company by the fact that we have won the Plantum Sustainability Award, the Horticultural Business Award (2019) and we were the Gold Rose winner at the International Grower of the Year Awards as well as the winner in the category ‘sustainability’ (2020).

# Unoform: Unity in variety

Unoform is the new standard for Anthurium plugs and stands for unity in diversity. With the introduction of Unoform, Anthura is able to deliver the best uniform plant material.

From now on the young plants are planted as a single plug in a 180-cell tray. After grading the plants are put back with 90 plugs in a new 180-cell tray. The plugs are analyzed by a new, advanced camera and put together by grade. The result is a tray with uniform single plugs.

### The advantages

Planting two single plugs together results in a significantly more uniform cultivation with a higher percentage of finished plants of good and uniform quality.

Another advantage is that the total cultivation time is reduced because the flowering areas in the greenhouse can be emptied more quickly. With naturally less uniform varieties, the difference will be particularly noticeable. There are more types available, so we can meet your demand better.

**In a nutshell**, with Unoform, Anthura offers you:

- More variety in product types;
- Benefits in total cultivation speed due to better uniformity of the end product.

### Unoform pot culture table

Article type	Description	Number/tray	Intended for *	Length
PP1L	18 mm plug - 1 plant	90	9 cm	6-12 cm
6PP2	56 mm plug - 2 plants	28	12/14 cm	10-16 cm (NEW)
7PP2	65 mm plug - 2 plants	18	14 cm	14-19 cm
9PP2	9 cm pot - 2 plants	Loose in P9	from 17 cm	17-25 cm

\*Anthura will advise which type is the best choice for you as a customer.

### Paper plug

The plants are grown in a paper plug. The structure of the plug allows better moisture absorption after transport and the development of the roots is better. This results in a more uniform growth.
