Cyclamen

Stress-free plant cultivation: 180-Cell Tray

To meet the challenges of today's production and the particular needs of cyclamen, Florensis has the perfect solution, the 180-cell tray. The priority is to minimise stress in young plant cultivation! The cyclamen for 180-cell trays are not transplanted into, but sown directly into the tray. The sufficient space between the cells - in comparison with other plug trays - provides ideal conditions for the plants' development. The results are healthy, robust young cyclamen plants with well developed roots which are suitable for direct potting even into larger-diameter pots.

Selected young plants: 84-Cell Tray

The cyclamen seeds are sown in small plugs and transplanted into the 84-cell tray, as they reach their optimum stage of readiness. Depending on the variety, this is done 7 to 8 weeks after sowing. The transplanting process is accompanied by careful selection. Weak plants are sorted out and discarded. This enables us to achieve very high uniformity and continuous high standardisation right through to the flowering product. The use of the more mature young plants from the 84-cell tray also gives you as grower a head start in cultivation, leading to a quicker turn-around of ready-for-sale plants.

Optimal efficiency: 288-Cell Tray

Direct sown cyclamen are available from Florensis in a 288-cell tray. Two to one week before delivery, the plugs in the trays are checked, empty cells are refilled and weak or small plants are sorted out manually. This procedure allows us to guarantee top quality starting material: the perfect young plant for efficient cyclamen cultivation!

CYCLAMEN

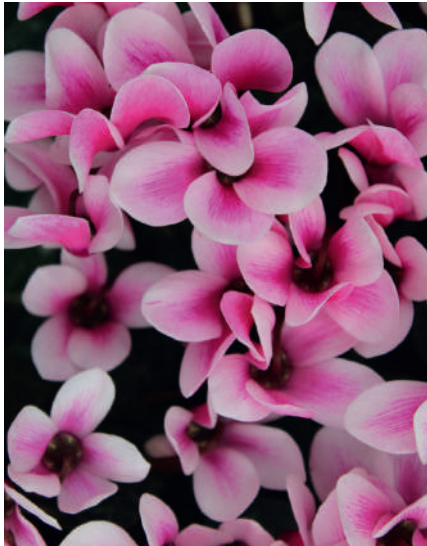

Goblet

The beautiful chalice-shaped flowers characterise Cyclamen Goblet. Goblet has a remarkable appearance and stands out in the Cyclamen assortment. The strong weather tolerance makes this Cyclamen very suitable for the border and pots on the terrace as well as the balcony. The Shine colours make this an attractive range of perfect outdoor Cyclamen.

Picola F1

The Picola F1 series contains a nice range of genetically compact varieties, which have a nice dense leaf structure. This series contains new genetics, which makes it more tolerant to botrytis than other mini-Cyclamen. The compact habit, uniform and quick flowering make Picola easy to plan, grow and sell. Picola fits perfectly into 6-9 cm pots. The unique Shine colours lighten up the mixtures. Highlights of this series are Picola Shine Red and Shine Mix!

Smartiz® F1 

Smart and Easy

This new mini compact series is perfect for small pots and high density (9 cm pots 35 plants per m², 6 cm pots 45 plants per m²).

Smartiz features a uniform flowering window and compact plant habit. Very suitable for summer and autumn flowering. The strong compact plants are very quick to flower (15 weeks from potting). Smartiz is central flowering and the flowers do not fade, even during the summer months.

Super Serie® Verano® F1

Verano has a nice round plant habit and is specially developed for production during the summer months. Verano is not sensitive to flowering delay caused by high temperatures. The plants are compact and very uniform in habit and flowering. Both qualities ensure perfectly programmable cultivation.

Super Serie® Carino® F1

Carino fills up the gap between Verano and Mini Winter perfectly. Where Verano can stay too compact in late pottings and Mini Winter gets too vigorous in early pottings, Carino will do the job. Plants will stay dense and compact and have optimal vigour to avoid botrytis problems. A very reliable winter grower! Available in a well balanced mix and a lot of separate colours.

Cyclamen Super Serie® Carino® F1

Super Serie® Mini Winter® F1

The Super Serie Mini Winter is especially developed for sales later on in the season. During this period of lower temperatures, the chance of botrytis increases. Mini Winter has a significant lower risk because of its open plant structure. This makes it an excellent Cyclamen variety for outdoor usage.

Cyclamen Super Serie® Mini Winter® F1

Super Serie® Compact F1

The plants of the uniform Super Serie Compact have a dense habit and a nice round plant shape. The plants are very floriferous and have a good shelf life. However, the dense plant habit results in a slightly higher chance of botrytis. This series is therefore less suitable for late production.

Dark Violet

Halios® F1 HD

Halios HD stands for High Density and combines the Halios varieties of a separate genetic line. A solution to help you make the most of your growing surfaces. The most recent developments in our selection are the base of Halios HD because of their more contained growth. The compact habit of the plants allows a higher culture density with large flowers.

Benefits for you and your customer:

- Pot size: Ø 12 to 17 cm
- Large flower - High Density
- Robust and dense plant habit
- Optimum choice for autumn
- Short and central stems
- Long lasting colours
- Easy to grow

Victoria Rose with Eye

Super Serie® XL® F1

The XL series has a long shelf life and flowers richly and uniformly on sturdy flower stems. Since it combines a uniform with a spherical plant habit, this series is very profitable when cultivated in pot sizes between 11-15 cm.

Sunsation® F1

Helianthus Sunsation has a large flower with a black pollen free centre on a compact plant. Because the flower does not produce pollen the plant is longer sustainable, also in the retail channel.

Hibiscus moscheutos

Luna F1

Hibiscus moscheutos Luna is both exclusive and impressive. The plant has an abundance of eye-catching flowers that measure up to as much as 15 cm in diameter. Luna is a bushy, well branching Hibiscus that does not require pinching and is suitable for large patio containers. When planted in the garden, Luna develops into a real eyecatcher. The plants do love the warmth and tolerate both dry and humid conditions. Reacts strongly to growth regulators.

Torenia fournieri

Kauai

The Torenia Kauai series is easier to produce in cultures with a maximum number of plants per m2 as compared to the usual assortment. Kauai has the most attractive colours for scheduled cultivation. The serie has a tight flowering window of 7 to 9 days. Kauai branches better than other Torenia varieties currently on the market and remains up to 5 cm shorter. This means that the plants can be controlled better and yield more profit. Because of its bright colours, Kauai is especially suitable for combinations in large pots and colourful bowls, inside as well as outside.

Astra F1

Platycodon Astra F1 is a trendy and very special summer flowering annual that thrives in pots, flower boxes and in the garden. It originates from East Asia and prefers a sunny but well-drained position. The uniqueness of the species is that the buds form big balloon-shaped flowers before opening to a star-shaped flower. The balloon-shaped buds are very decorative and make Astra saleable at an early stage. Astra can be used until late summer.
