LAGUNA MATERADA HOTEL IN POREC, CROATIA

Lighting design for international hospitality

An important accommodation facility in the field of international tourism, the Laguna Materada Hotel in Croatia consists of a large central complex, housing restaurant and reception, rooms and suites, directly overlooking an elegant terrace and accessed by a walkway lined with well-kept greenery.

The technical lighting project designed by the Platek team fully meets with the clients' specifications and the technical and environmental demands of its context: providing reliable and functional lighting while at the same time creating a scenic design that is bright, evocative, relaxing, welcoming and refined, in keeping with the hotel's own image. To achieve these objectives minimal and elegant design equipment was used, nicely in keeping with the general atmosphere and in fact offering a final touch of contemporary and cosmopolitan design.

So TETRA lights mounted on masts provide the lighting needed for pathways and entrances, ensuring the optimal mix of security and comfort along the pedestrian routes. The stakes of the MOON line in three different heights accompany guests between walkways, green spaces, entrances and relaxation zones, standing out with the special 'lunar' design that gives intense and evocative effects with full regard for the environment thanks to the LED light sources. For the two swimming pools in the area recessed underwater lights were installed, also LED, that allow you to create games with water and light, making them not only safe to use but particularly pleasant and charming as well during the evening time.

Platek's proposed solution for this impressively spacious hotel specialising in international hospitality demonstrates the company's ability to respond precisely and with maximum technical and stylistic sensitivity to the clients' specifications, developing integrated and bespoke projects that combine the perfect blend of environmental sustainability, energy saving, finishing on time and providing bright scenic design of the highest aesthetic quality.
