## **BOTANIC GARDEN OF ŠIAULIAI UNIVERSITY**

**HISTORY.** Botanic garden of Šiauliai University was founded in 1997, instead of Agrobiological Station. It is a member of Botanic Gardens Conservation International (BGCI) and Planta Europa Network for European plant conservation since 2003. Currently the Botanic garden is in city territory and occupied 6.54 ha. Director – prof. dr. *Asta Klimienė*.

**ŠIAULIAI AREA.** Šiauliai is located in Northern part of Lithuania. It is the fourth largest city in Lithuania. The population is about 105653 people.

### **APPROACHES OF SCIENTIFIC RESEARCH:**

- Research of biodiversity regularities *in situ* and *ex situ*.
- Introduction and acclimatization of ornamental plants.
- Education activities in Botanic garden.

**SECTIONS OF BOTANIC GARDEN.** In 2015 quantity of taxa of plants was over 4000. These plants are stored in 7 sections:

- **Section of Plant Systematics and Geography.** Species of plants are treated by A. L. Tachtadjan system. The section establishment began in 2000 and now section contains about 900 species of 92 families. Research worker *Roberta Dubosaitė-Lepeškevičė* is curator for the section.
- **Section of Lithuanian flora.** Section was started to establish in 2011. Priorities: species from local north Lithuania flora, rare Lithuanian Red books and protected species, medical and ethnobotany plants resources, in small area exhibited weed. Section contain totally about 180 taxa of 58 families plants. Seeds of monocotyledons got from Lithuanian Research Centre for Agriculture and Forestry. Worker *Virginija Aleknienė* is curator for the section.
- **Section of Floriculture.** Much attention is paid concentrated to species and breeds of decorative perennial herbs, also plants of the genus orris, day lily and lily. Number of taxa in section – 1200. Specialist *Indrė Šklenikienė* is curator for the section.
- **Section of Mountain Plants.** This section contains mountains plants from all over the world (Alps, Pyrenees, Caucasus, Altai, Hymalaya, Rocky Mountains, and New Zealand) and arctic zones. Today section contains plants of over 1000 species and cultivars of 70 families. In this section plants are selected by considering such criteria as decorativeness of plants, geographical plurality and distribution. Research worker *Rimanta Vainorienė* is curator for the section.
- **Section of Dendrology.** Collection of dendrology contain more than 900 taxa woody plants of which 600 are species and cultivars of dwarf coniferous and leafy trees. The most numerous in the section is *Ericaceae* family, which has over than 300 taxa and cultivars, such as *Rhododendron*, *Calluna*, *Kalmia*, *Gaultheria*, *Erica*, *Vaccinium*. Specialist *Vaidas Juknevičius* is curator for the section.
- **Phenological Garden.** The International Phenological Garden – unique network in Europe for the observation of plants. In all gardens generally identical trees and shrubs are planted in order to make large-scale comparisons among the timing of different development stages of plants. Mainly, the rise in air temperature in the previous decades and the clear phenological response by plants led to this increased interest in phenological data. Research worker *Rimanta Vainorienė* is curator for the section.

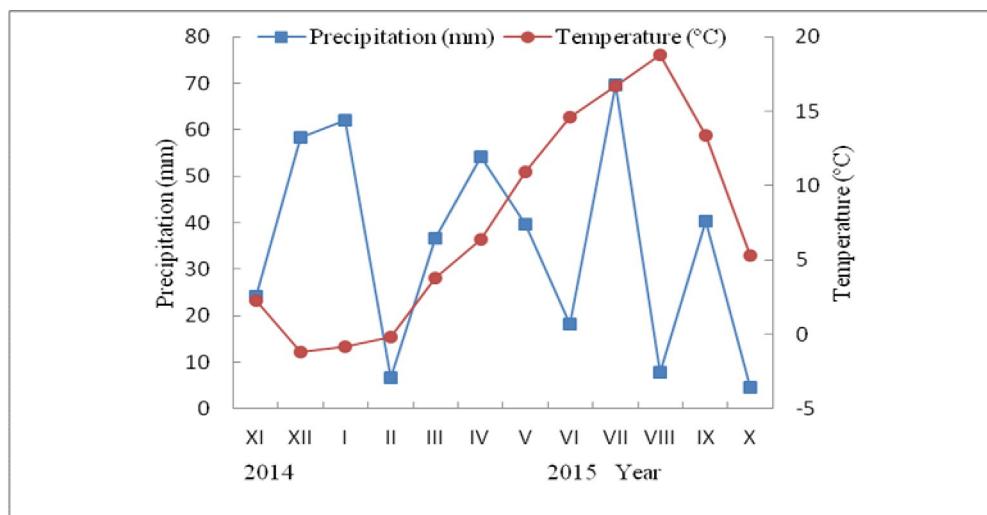

## GEOGRAPHICAL SITUATION:

Latitude N 55° 55' 57.7"

Longitude E 23° 16' 57.0"

## Zone 5

## CLIMATIC CONDITIONS:

Distribution of mean month temperatures (in C°) and precipitation (in mm) in 2014 (November–December) - 2015 (January – October)

**Collectors:** V. Aleknienė, D. Ūsienė, R. Vainorienė, R. Dubosaitė–Lepeškevičė, I. Šklenikienė.

\* - Seeds collected in 2014

## SEEDS FROM FOREIGN PLANTS CULTIVATED IN THE GARDEN

**MAGNOLIOPHYTA** Cronquist, Takht. et W. Zimm. ex Reveal.

**MAGNOLIOPSIDA** Brongn.
